Subsection 7.—Proportions of Trade in Raw and Manufactured Products.

The stage attained in the industrial development of a country is indicated by the character of the goods it imports and exports. In the early years of Canada's development the imports were made up chiefly of manufactured products and the exports of raw and semi-manufactured products. Since the opening of the twentieth century this has been almost reversed, a large percentage of the imports consisting of raw and semi-manufactured products for use in Canadian manufacturing industries, and the exports consisting predominantly of products which have undergone some process of manufacture. In fact, the leading manufactures of Canada are for the processing of raw materials in the production of which Canada excels, and many of these processed domestic products are marketed abroad. Furthermore, as the population of the country grows, the range of elaborated goods formerly imported which may be manufactured on a competitive basis of mass production within the country expands, so that there are now many industries in Canada, serving the domestic and even foreign markets, using imported raw materials such as rubber, cotton and sugar. Since the opening of the present century, Canada has passed through much the same stages of development in her economic life as did the United States during the last quarter of the nineteenth century, although

the trend in Canada has been more pronounced in increasing the proportion of partly and fully manufactured goods as compared with raw materials exported, rather than in increasing the proportion of raw materials compared with that of partly and fully manufactured goods imported. Since 1929, the rapid decline in commodity prices, which has affected raw materials more than manufactured goods, has tended to increase the percentages of both imports and exports of manufactures.

Statement XI shows how Canada's imports and exports, analysed into the three categories of raw materials, partly manufactured goods, and fully or chiefly manufactured goods, are distributed among the continents and leading countries of the world. The close of the analysis demonstrates that the imports into Canada from the British Empire except the United Kingdom, consist chiefly of raw and semi-manufactured products, while the exports to "other Empire" are made up mainly of fully manufactured products (81·8 p.c. in 1934).

In trade with industrialized continents, such as Europe and Asia, Canadian imports are largely manufactured goods and our exports raw materials or partly manufactured goods, while in trade with South America, Oceania, Africa and North America (if the United States be excluded) the situation is the reverse.

See also Table **15** of this chapter on this subject.

Subsection 8.—Canada's Position in International Trade in 1933.

Canada's Position in World Trade, 1933.—In 1932 Canada, in world trade, had occupied seventh place in total trade, ninth place in imports, and fifth place in exports. In the calendar year 1933 there have been some notable changes in the relative position of certain chief trading countries of the world. The United Kingdom has moved from third position in 1932 up to second position in 1933 in

the value of exports, displacing Germany, while Canada has moved from fifth place in 1932 down to sixth place in 1933, being displaced by Belgium. For the calendar year 1933 Belgian exports exceeded those for Canada by only $10,000,000, while for the period July–December, 1933, the exports from Canada amounted to $325,400,000 compared with a similar trade for Belgium of $297,700,000, so that during this period Canada occupied fifth position in export trade. In import trade Canada moved from ninth place down to eleventh place, yielding ninth place to Switzerland and tenth place to British India; while, in total trade, she moved from seventh place in 1932 down to ninth place in 1933, Japan moving from eighth place up to seventh, and Italy from ninth place into eighth place.

XII.—TRADE OF TWELVE LEADING COMMERCIAL COUNTRIES, EXPRESSED IN CANADIAN CURRENCY, CALENDAR YEAR 1933.

NOTE.—The figures in parentheses represent relative positions in 1932.

Canada's Share in World Trade.—Two tables on pp. 86 and 87 of the Condensed Preliminary Report on the Trade of Canada, 1934, published by the Dominion Bureau of Statistics, and not reproduced here to economize space, show in values and percentages Canada's share in the imports and in the exports of the forty principal trading countries of the world for the calendar years 1913, 1922 and 1932.

Since 1913 Canada has made remarkable progress in the expansion of her export trade to the world's markets, and in supplying her requirements from all parts of the world. The first of the above-mentioned tables showing "Canada's Share in Imports of Principal Countries", indicates that, while in 1913 Canada provided only 1·95 p.c. of the total imports of these countries, in 1932 her share was 4·05 p.c.

The other side of this trade expansion is shown in the other table, "Canada's Share in Domestic Exports of Principal Countries", which indicates the increasing proportion of the exports of 40 countries taken by Canada. The exports of these countries to Canada increased from 3·39 p.c. of their total exports in 1913 to 3·53 p.c. in 1932.

More detailed information relative to Canada's position in international trade in recent years is given in the following statements dealing respectively with:—XIII, Comparison of the Trade of Twenty Principal Countries of the World, 1913 and 1933; XIV, Trade of Twenty Principal Trading Countries of the World, 1923 to 1933; XV, Per Capita Trade of Twenty Principal Countries of the World, 1923 to 1933; and XVI, Trade Balances of Twenty Principal Countries of the World, 1913, 1932 and 1933.

XIII.—COMPARISON OF THE TRADE OF TWENTY PRINCIPAL COUNTRIES OF THE WORLD, CALENDAR YEARS 1913 AND 1933.

NOTE.—Countries arranged in order of importance of trade, 1933.

Subsection 9.—Main Historical Tables and Tables Showing Current Trends in External Trade.

In this subsection are assembled, in summary form, the main tables of Canadian trade since Confederation, while the figures of trade in the latest years are given in greater detail by countries and commodities. Tables **1** to **9** inclusive are of a historical character, while Tables **10** and **11** give in summary form, and Tables **12** and **13** in detail, our exports and imports for the four latest fiscal years. In Table **14** imports are divided into dutiable and free, and exports into Canadian and foreign produce. Table **15** analyses our trade in the latest year by main groups of origin and degrees of manufacture. Table **16** classifies that trade according to purpose. Table **17** gives trade by provinces and customs ports, and Table **18** by tariffs. Tables **19** and **20** deal with our imports and exports by countries in the latest five years, while Table **21** shows the values and percentages of our imports and exports transported *via* the United States.

AGGREGATE EXTERNAL TRADE OF CANADA 1907-34

[1] Nine months. [2] Not including exports of foreign produce.

3.—Movement of Coin and Bullion, fiscal years 1868-1934.

NOTE.—Up to 1919 "silver bullion in bars, blocks, ingots, drops, sheets and plates, unmanufactured" was included in "coin and bullion" but since that time it has been regarded as "merchandise". The figures from 1899 have been revised in accordance with the new arrangement.

[1] No record of 1919 imports and exports.

4.—Duties Collected on Exports, 1868-92, and on Imports for Home Consumption, 1868-1934, with Percentages of Expense of Collection to Gross Customs Revenue Collected, fiscal years 1868-1934.

NOTE.—Duties on exports were not collected after the year 1892. The figures in this table are the gross figures of duties collected; the net national revenue from customs taxation, because of the drawbacks paid where commodities on which duties have been collected are afterwards exported in a more highly manufactured state, is considerably smaller. For net customs revenue see statistics of revenue from customs duties, in the historical revenue table in Chapter XXI on Public Finance.

Fiscal Year.	Duties Collected on Exports.	Duties Collected on Imports.	Percentage of Expense of Collection to Gross Customs Revenue.	Fiscal Year.	Duties Collected on Exports.	Duties Collected on Imports.	Percentage of Expense of Collection to Gross Customs Revenue.

13.—Principal Imports into Canada for Consumption from United

No.	Item.		United Kingdom.			
			1931.	1932.	1933.	1934.
	VI. Non-Ferrous Metals—concluded.					
	Precious Metals—					
1	Electro-plated ware	$	749,371	411,500	249,582	207,036
2	Silver in bars, blocks, etc	$	26,006	85,931	87,126	71,489
	Totals, Precious Metals[1]	$	971,261	627,385	438,143	411,237
	Tin—					
3	Tin blocks, bars, pigs	cwt.	8,224	4,295	5,497	5,808
		$	238,631	109,384	156,933	255,507
	Totals, Tin[1]	$	263,760	148,956	195,802	290,788
4	Zinc sheets and plates	cwt.	691	499	588	430
		$	3,905	2,370	2,498	3,065
	Totals, Zinc[1]	$	30,438	12,467	5,158	5,455
5	Phosphor tin and bronze	lb.	198,276	100,505	99,366	312,929
		$	61,690	29,377	29,216	83,599
6	Clocks and watches	$	51,620	41,581	26,745	17,299
	Electric Apparatus—					
7	Batteries, primary	$	2,094	1,601	1,566	1,506
8	Batteries, storage (and parts)	$	358,688	183,960	92,105	29,242
9	Electric heating and cooking apparatus	$	751	1,471	1,274	706
10	Dynamos, generators	$	336,897	117,541	23,866	21,385
11	Incandescent lamps	$	1,811	2,177	1,162	1,021
12	Flash lights, head lights, etc	$	4,512	3,100	2,116	2,629
13	Electric light fixtures	$	22,154	14,015	9,997	12,912
14	Meters	$	88,857	41,496	23,491	18,599
15	Motors	$	567,147	304,639	168,576	128,244
16	Spark plugs, etc	$	5,181	21,262	48,110	14,191
17	Switches, etc	$	154,900	71,601	26,344	40,139
18	Telegraph instruments	$	59,781	28,103	4,751	2,575
19	Telephone instruments	$	420,308	260,153	49,379	29,759
20	Transformers	$	386,418	319,305	242,900	12,113
21	Radio tubes	$	20,784	9,997	5,409	223
22	Wireless and radio apparatus, n.o.p	$	66,284	32,291	36,192	63,609
	Totals, Electric Apparatus, n.o.p.[1]	$	2,768,802	1,653,346	854,283	537,963
23	Gas apparatus	$	5,931	2,978	3,534	4,294
	Printing Materials (except Machinery)—					
24	Stereotypes	sq. in.	27,890	58,745	104,829	124,883
		$	2,515	2,562	2,796	3,582
	Totals, Printing Materials[1]	$	17,924	50,821	14,762	20,324
25	Manganese oxide	cwt.	31	31	28	22
		$	80	99	85	68
26	Antimony, not ground	lb.	6,720	81,976	34,328	157,920
		$	589	5,995	2,117	9,092
27	Mercury	lb.	2,152	850	13,217	14,938
		$	2,721	1,134	9,789	9,650
28	Buckles, clasps, fasteners	$	5,806	7,659	12,373	51,537
29	Lamps and lanterns	$	17,341	7,161	2,205	2,275
30	Articles for shipbuilding	$	144,075	238,475	89,659	61,870
	Totals, Non-Ferrous Metals[1]	$	**6,340,567**	**4,275,877**	**3,314,548**	**2,967,035**
	VII. Non-Metallic Minerals.					
31	Asbestos, other than crude	$	118,756	101,692	100,431	180,217
	Clay and Clay Products—					
32	China clay	cwt.	268,407	204,272	224,458	263,912
		$	133,103	81,171	86,882	108,700
33	Fire clay	cwt.	25,843	14,526	13,457	18,639
		$	6,874	7,403	5,572	6,168
34	Bricks, fire	$	179,002	176,678	104,686	112,636
35	Brick and tile, n.o.p	$	358,312	251,138	108,138	67,153
36	Pottery and chinaware	$	2,742,533	2,512,620	2,425,276	2,194,305
37	Artificial teeth	$	412	551	662	–
38	Bathtubs, etc	$	354,128	256,361	113,648	90,038
39	Insulators, porcelain	$	7,590	6,652	7,432	1,690
	Totals, Clay and Clay Products[1]	$	3,822,307	3,328,963	2,873,325	2,618,084

[1] Totals include other items not specified.

13.—Principal Imports into Canada for Consumption from United

No.	Item.		United Kingdom.			
			1931.	1932.	1933.	1934.
	VII. Non-Metallic Minerals—concluded.					
	Coal and Coal Products—					
1	Coal, anthracite	ton	918,252	886,938	1,456,715	1,576,562
		$	5,658,951	4,764,291	7,283,189	7,939,706
2	Coal, bituminous	ton	145,375	118,998	357,447	357,680
		$	485,562	330,078	851,169	880,758
3	Coal for ships' stores	ton	–	–	–	–
		$	–	–	–	–
4	Coal tar, crude	gal.	504	1,750	500	10,812
		$	290	359	204	821
5	Carbolic oil	gal.	13,059	749,730	247,761	18,051
		$	6,308	77,983	20,392	3,313
6	Coke	ton	16,443	2,957	40,399	22,120
		$	65,806	16,342	153,268	76,143
	Totals, Coal and Coal Products[1]	$	6,217,375	5,191,735	8,309,104	8,901,363
	Glass and Glassware—					
7	Carboys, bottles, jars, milk bottles, etc.	$	77,854	77,112	43,909	65,161
8	Tableware	$	59,831	50,670	33,841	47,260
9	Incandescent lamp bulbs and tubing for	$	–	99	–	–
10	Lamp chimneys, shades and globes	$	8,337	1,558	10,128	7,553
11	Window glass, common	sq.ft.	1,830,095	590,331	1,491,822	7,247,061
		$	89,953	29,947	55,913	232,600
12	Plate glass, not over 7 sq.ft.	sq.ft.	552,532	429,743	293,292	502,168
		$	177,887	123,753	84,507	148,956
13	Plate glass, other, not bevelled	sq.ft.	647,256	434,068	294,884	308,734
		$	287,476	196,239	135,536	149,060
	Totals, Glass and Glassware[1]	$	988,124	670,139	502,921	845,266
14	Graphite and its products	$	38,625	32,119	29,657	35,517
	Petroleum, Asphalt and Their Products—					
15	Asphalt, solid	cwt.	–	5	159	24
		$	–	28	412	41
	Crude Petroleum—					
16	For refining	gal.	–	–	–	–
		$	–	–	–	–
17	Other, ·8235 specific gravity and heavier	gal.	–	–	–	4,200
		$	–	–	–	210
18	Fuel oil for ships' stores	gal.	–	–	–	–
		$	–	–	–	–
	Totals, Crude Petroleum	$	–	–	–	210
19	Coal, and kerosene oil, refined	gal.	155	–	–	–
		$	24	–	–	–
20	Gasolene, casinghead, for blending	gal.	–	–	–	–
		$	–	–	–	–
21	Gasolene, n.o.p	gal.	–	800	–	–
		$	–	381	–	–
22	Lubricating oils	gal.	352,890	263,340	123,913	97,872
		$	235,429	150,673	67,405	50,909
	Totals, Petroleum, Asphalt, etc.[1]	$	263,580	168,663	81,409	66,791
	Stone and Its Products—					
23	Abrasives	$	125,740	97,137	78,533	50,593
24	Building and paving stone	$	97,781	48,872	41,336	15,514
25	Phosphate rock	cwt.	–	–	–	–
		$	–	–	–	–
26	Cement	cwt.	315,659	46,145	38,397	44,364
		$	361,426	55,368	18,936	16,089
27	Silica sand	cwt.	–	392	123	441
		$	–	324	256	799
28	Whiting	cwt.	140,425	127,386	105,790	126,382
		$	77,402	61,909	50,231	58,290
	Totals, Stone and Its Products[1]	$	727,312	316,973	237,573	193,240
29	Carbons, electric	$	999	377	981	1,939
30	Diamonds, unset	$	413,051	155,577	114,400	62,399
31	Salt	cwt.	419,546	493,584	579,899	599,631
		$	185,756	221,030	261,102	244,413
32	Sulphur	cwt.	2	157	68	196
		$	9	414	185	666
	Totals, Non-Metallic Minerals[1]	$	12,902,472	10,286,241	12,582,165	13,229,645

[1]Totals include other items not specified.

[1] In this classification the expression "Canadian Farm Products" refers, in the case of exports, to commodities actually produced, in their original state, on Canadian farms. In the case of imports, it covers all commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers, in both imports and exports, materials or commodities such as Canada does not produce in their original forms, *e.g.*, cane sugar, tea, rubber, cotton, silk, etc.

17.—Values of Total Exports, Imports Entered for Consumption, and Duties Collected Thereon, at Certain Ports and by Provinces, fiscal years ended Mar. 31, 1933 and 1934.

NOTE.—The values of imports and exports at the several ports of entry given in the following table indicate that merchandise of the value stated was entered inwards, or passed outwards, at the ports mentioned, but it is not to be inferred that the imports were all for consumption at such ports or that the exports originated there.

Subsection 10.—Comparison of the Volume of Imports and Exports.*

The statistics of the external trade of Canada have not, until lately, been analysed in detail to reveal the physical volume of external trade as well as the dollar value of that trade, and have therefore been somewhat misleading when used to show the physical growth of production and external trade. When, for example, Table **1** of this chapter is examined, it seems to show stagnation in our external trade between the early 70's and the middle 90's of last century and a very rapid growth thereafter. Yet we know that the apparent stagnation was partly due to the fall in general prices between the '70's and the middle '90's, while the rapid growth of the later figures is exaggerated by the rise of prices after 1897, especially in the war period, 1914 to 1921. Since 1929 another precipitate decline in prices has exaggerated the actual decrease of trade. Thus the figures as published give us no true measure of the *volume* of our external trade, yet, of the commodities that satisfy human needs, it is the volume rather than the value with which the masses of the population are more intimately concerned. Volume is, from many points of view, a more important consideration than value, and it is desirable to secure a record of the fluctuations in the volume of the country's trade as distinguished from the value thereof. This is what is attempted in Table **22.**

The method adopted for ascertaining the fluctuations in volume has been to take a base year—1926—and to revalue the quantities of each commodity imported or exported in any given year at the average import or export value of that commodity in the standard or base year. Where quantities are not available, the values of items are assumed to have moved in the same direction and in the same proportions as closely related commodities. For this reason the results must not be regarded as of great precision but, since the value of goods not returned by quantity and of those not comparable over a limited series of years is small in comparison with the total trade, the amount of error introduced on their account is inconsiderable. By this method it is comparatively easy to compare the volume of the trade in a particular year with that in a recent year and the margin of error is fairly small. When, however, a comparison of the volume of trade in a particular year with that of another year ten or more years before is undertaken, the margin of error is very much greater. Certain new commodities have come into existence in the course of the decade, while the qualities of others have been materially changed; further, various new items have been added to the customs classifications, and it is not always possible to say just what customs items of 1934 correspond with those of 1914. For these reasons comparisons with the pre-war fiscal year ended 1914 have been discontinued since 1929. This comparison for 1929 and certain previous years appeared on pp. 581–583 of the 1930 Year Book.

In Table **22** the values and volumes of imports and exports respectively for the years 1929 to 1934 are compared with 1926, for the main groups, as follows: the imports and exports are first shown at the values at which the trade was recorded; the same imports and exports are then shown at the value they would have had if the average price or unit value had been the same in each year as it was in 1926. In other words, the figures on the basis of 1926 average values enable a comparison to be made of the imports or exports for the given years on the basis of variations in quantity only, variations due to different prices having been eliminated. Index numbers of declared values, that is, the total declared values of the imports or exports in each year expressed as percentages of 1926, are then given. These are

*Further information as to the methods adopted in making the following analyses will be found on p. 804 of the Annual Report on the Trade of Canada for the fiscal year ended Mar. 31, 1934, published by the Dominion Bureau of Statistics.

followed by the index numbers of average values, which show the prices at which goods were imported or exported in each year expressed as percentages of the prices in 1926. Finally, the index numbers of physical volume show the relative quantity of merchandise imported or exported in each year expressed as a percentage of the quantity of the same merchandise in 1926.

For an analysis in greater detail, dealing similarly with sub-groups and principal commodities imported and exported, the reader is referred to pp. 803–817 of the Annual Report on the Trade of Canada for 1934, published by the Dominion Bureau of Statistics.

The physical volume of imports has been fairly well maintained throughout the depression in those groups comprising goods which enter more or less directly into consumption, such as vegetable products and textiles, while the volumes of imported chemicals and non-metallic minerals (chiefly petroleum products and coal) were higher in 1934 than 1926. On the other hand, the volume of imports of lasting or capital goods, largely comprised within the iron, non-ferrous metal and wood products groups, was at a very low level in the two latest years shown.

In the second half of Table 22 the volume of exports in 1934 of farm products, comprising both the vegetable and animal groups, are shown to be only about two-thirds those of the base year 1926. Exports of wood and paper products (another important group in the Canadian economy) recovered in 1934 to nearly 90 p.c. of the volume of the base year. However, of the four groups of major importance to the prosperity of Canada, the best showing was made by non-ferrous metals with a volume of exports in 1934 amounting to 165 p.c. of those of 1926. Furthermore, if the product of the chief branch of Canadian mining enterprise—namely, gold mining—had been included in the non-ferrous metal exports, instead of being treated as bullion and excluded from the commodity groups altogether, the exports of non-ferrous metals would have shown a still greater volume.

Section 4.—The Tourist Trade of Canada.*

Tourist Expenditures in Canada.—In recent years the tourist trade has become an important source of revenue in certain sections of the Dominion, materially affecting the balance of trade. It represents the economic disposition of national assets in which Canada is particularly rich, namely: its picturesque scenery; its invigorating climate; its opportunities for hunting, fishing and boating, as well as for winter sports—for the exploitation of which a considerable capital expenditure has been made on hotel accommodation, improved highways and other attractions. Those entering from the United States in automobiles are by far the most important class of tourists. The business accruing to the Dominion in this manner represents some return for expenditures on highways which have been very large in the period since the War (see pp. 733–736). In order to attract this traffic, highways have been built through regions of picturesque scenery, such as the Rocky Mountains, northern Ontario, and the Laurentians and Gaspé in Quebec. A further asset for Canada arises from the fact that these scenic regions with their invigorating climate

*Abridged from "The Tourist Trade in Canada, 1920–26", and reports for each year from 1927 to 1933 inclusive, published by the Dominion Bureau of Statistics and obtainable on application. These reports contain a full explanation of the methods used in making the estimates.

are at their best in the summer holiday season when motorists are most ready to travel. The expenditure of travellers coming to Canada from other countries on business has the same effect, so far as its influence on the balance of trade is concerned, as the export of additional commodities would have. Indeed, in so far as commodities are sold to tourists travelling in the Dominion, our exportable surplus of such commodities is reduced.

It is impossible to obtain a direct record of expenditures of this kind. Moreover, even a rough estimate of the total is extremely difficult to make, visitors to Canada being of all classes, engaging in widely different activities or forms of recreation, remaining for varying periods, with expenditures undoubtedly ranging from very small to very large amounts.

The tourists who enter Canada may be divided into three classes: (a) those coming in *via* ocean ports; (b) those entering from the United States in automobiles; (c) those entering from the United States by rail or steamer. In 1933 these classes are estimated to have expended in Canada $7,763,000, $72,196,000 (equivalent to $77,250,000 in Canadian funds at average rates of exchange for the period) and about $29,460,000 ($32,111,000 in Canadian funds) respectively, or a grand total of approximately $109,419,000 (about $117,124,000 in Canadian funds).

The Department of National Revenue records the number of tourists entering Canada in automobiles from the United States through each of the ports of entry along the border. An estimate of the expenditure of tourists of this class in 1933, according to the provinces by which they entered, is as follows: Maritime Provinces, $43,986,000; Quebec, $17,773,000; Ontario, $48,920,000; Manitoba, $828,000; Saskatchewan, $410,000; Alberta, $349,000, and British Columbia $4,984,000.

Expenditures of Canadian Tourists Abroad.—Canadian tourists visiting other countries travel in the main to the British Isles and other European countries on visits home, or as sightseers. Again, many of them, especially elderly or delicate persons, go to Florida, Bermuda or the West Indies. These tourists may be classified in the same three classes as those entering Canada. The total expenditures of such Canadian tourists in other countries were $50,860,000 in 1933—a decline of $6,543,000 from the previous year.

Summary.—For the years 1924 to 1933 the total estimated expenditures of tourists from other countries in Canada, as compared with those of Canadian tourists in other countries, are given in Table **23.**

23.—Tourist Expenditures in Canada and of Canadians Abroad, 1924-33.

Year.	Estimated Expenditure of Tourists from Other Countries in Canada.	Estimated Expenditure of Canadian Tourists in Other Countries.	Estimated Excess of Expenditure of Tourists from Other Countries.

[1] Converted into Canadian funds at average rates of exchange for the period.

Until the depression made itself felt in 1930, there was a steady increase in the amounts spent both by tourists from other countries in Canada and by Canadians in other countries. During the years 1930-32 the tourist trade, in spite of successive declines, exhibited a surprising vitality as compared with the generally depressed state of trade and industry. In each of these years the expenditures of tourists in Canada (and in the latter two the balance after deducting the corresponding expenditures of Canadians in foreign countries) constituted an "invisible" export of greater value than any single commodity exported. A marked contraction in both volume of travel and tourist expenditures occurred in 1933, reflecting the cumulative effects of the low level of economic activity in recent years, the general lowering of incomes and the intensification of "depression" psychology. Data at present available indicate a fairly substantial increase in tourist revenues in 1934.

Section 5.—Balance of International Payments 1920-32.*

"Balance of Trade" figures are frequently misinterpreted owing to the persistence of the doctrine long ago exploded that a nation's trade is necessarily in a healthy state when exports exceed imports, necessitating an import of gold to make up the difference. Trade was then said to show a "favourable" balance. This theory only took account of the "visible" or commodity items of trade, whereas the true balance of a nation's trade can only be known when not only the commodity items are considered, but also the "invisible" items such as interest, freight, immigrant remittances, financial services, tourist traffic, etc. In short, all debit and credit transactions must be set down in order to find out the true balance. If all the visible and invisible items are thus tabulated the debit or credit difference will be a final invisible item—capital import or export—and this will bring the nation's trade account into a state of balance. Thus, the commodity trade balance of a country cannot be understood by itself but only as it is interpreted in the light of the invisible items of a country's international transactions. In the light of such data, it will be found that a so-called favourable or unfavourable balance will mean an entirely different thing at different times in a country's history. The balance of international payments, which takes account not only of commodity trade but of all transactions, reveals the meaning of the trade balance. It shows, for example, that in 1920, 1921 and 1922 our international accounts were balanced by large imports of capital, although our commodity trade balance was favourable in 1920 and 1922. During these years Britain repaid us war funds as follows: 1920, $104,000,000; 1921, $128,000,000; 1922, $84,000,000. From 1923-28, however, the international accounts show a credit balance after allowing for interest payments and maturities, thus denoting capital exports. In these years Canada became temporarily a capital-exporting country. In these latter years, therefore, the explanation of our favourable commodity trade balance was quite different from that for the period, 1894 to 1903, when it was explained by payments of interest and maturities.

From the foregoing it will be seen that an estimated balance of international payments is indispensable to the understanding of trade accounts. It has, however, a great many other important uses, among which the following may be mentioned: (1) to give a comprehensive picture of our international debits and credits and how they are balanced; (2) to show the extent of our international borrowings and lend-

*Abridged from the annual report "Canada's Balance of International Payments", by Herbert Marshall, B.A., F.S.S., Chief of the Internal Trade Branch of the Dominion Bureau of Statistics. This report includes explanatory data on the methods followed in computing these statistics.

ings; (3) to show the magnitude of individual invisible items, such as interest, freights, tourist traffic, etc., in our international transactions; (4) to explain exchange disturbances and the effect of international financial difficulties; and (5) to furnish data for guidance in the formulation of international fiscal, financial and commercial policy.

As already stated, in the years from 1923 to 1928 Canada became temporarily a capital-exporting country. This was the result of abundant funds accumulating in the Dominion owing to three causes. In the first place, there had come into the country during the War about $1,250,000,000 through the purchase of our commodities at high prices; this was seeking an investment outlet. In the second place, the large investment of United States capital in the Dominion from 1914 to 1920 was now increasing the nation's output. In the third place, successive large harvests at relatively high world prices were a foundation of prosperity. These factors combined, caused an unprecedented accumulation of savings, which was used by financial institutions and individuals not only to finance domestic capital needs, but also to avail themselves of opportunities for profitable investment abroad. The prolonged and extravagant "bull" market in the New York and other United States' stock exchanges culminating in the early summer of 1929, and the high interest rates prevailing in those markets, attracted enormous sums to the United States from other countries, including Canada. Thus from 1923 to 1928 we had on balance an export of capital to our credit, though at the same time other countries, particularly the United States, continued to invest large sums in the Dominion. In contrast to this there were unfavourable balances in 1929 and 1930, considering both visible and invisible items, of $65,000,000 and $159,000,000 respectively, while in 1931 the balance was favourable by about $28,000,000. In the light of all available information, it appears that the balances in 1929 and 1930 represented a net movement of capital into Canada for investment, while those of 1931 and 1932 represented a net movement outwards. In the last-named year, however, the capital export appears to have been in the main not for investment but for the purpose of retiring maturing issues and for repurchases. A more detailed discussion of the balance of payments in these years will be found at pp. 600-601 of the 1933 Year Book.

In 1933 credit balances of $146 million for commodities, $92 million for gold, $60 million for tourist trade, amounting in all to $298 million, were more than sufficient to meet net debits of $225 million for interest, $15 million for freight, and $9 million for exchange, totalling $249 million. Minor invisible items showed a net debit of $8 million. The total net credit, exclusive of capital, was approximately $40 million which, plus a net credit of approximately $62 million, representing capital inflow, makes a total of $102 million for which no debit items appear. An error and omission estimate is therefore added to bring the two sides of the international accounts into balance.

In 1934 it will be noted that the debit for interest and dividend payments was $230 million. Maturity payments were $75 million. These two items together amount to $305 million. Commodity, tourist and gold credit balances totalled $323 million and these, less $18 million, were required to meet the interest, dividends and maturities. The balance of $18 million just about offset a freight deficit of $21 million. Remaining debits amounting to $10 million plus the 48\frac{3}{4}$ million debit for untraced items (errors and omissions) were balanced by sundry credits of 6\frac{1}{2}$ million plus capital credits on the sale and purchase of securities and direct investments.

Table 24 shows the preliminary estimates of the balance of international payments for 1933 and 1934. Figures for 1920-26 were given at pp. 601-602 of the 1929 Year Book, although these have since been somewhat revised in later estimates. Figures for 1927-28 will be found at p. 501 of the 1932 Year Book and those for 1929-32 at p. 601 of the 1933 Year Book.

24.—Estimated Balance of International Payments, 1933 and 1934.

NOTE.—Figures for both years are preliminary.

CHAPTER XVII.—INTERNAL TRADE.

This treatment of trade within the Dominion commences with a general statement on interprovincial trade. This is followed by sections dealing with the statistics of the grain trade and of the marketing of live stock and animal products. Statistics of cold storage facilities and of commodities in cold storage are next in order. In the latter part of the chapter will be found sections relating to various administrative services connected with trade, including: the payment of bounties; the granting of patents, copyrights and trade marks; and weights and measures, electricity and gas inspection. The concluding section of the chapter deals with the statistics of wholesale and retail merchandising collected at the Census of Distribution in 1930 and subsequently.

Section 1.—Interprovincial Trade.*

Canada may be divided into the following five economic regions, each deriving its specific character from the predominant occupations of its people:—

1. *The Eastern Fishing, Lumbering and Mining Region*, comprising the river valley and gulf of the St. Lawrence, together with the Atlantic coast; in other words, the greater part of the Maritime Provinces, the northern part of the province of Quebec (excluding the former district of Ungava), and a portion of northern Ontario.

2. *The Eastern Agricultural and Industrial Region*, comprising the cultivated portions of the Maritime Provinces and of the provinces of Quebec and Ontario. In the latter provinces the cultivated areas extend along the banks of the St. Lawrence and its tributaries.

3. *The Central Agricultural Region*, extending from the Red River valley to the Rocky mountains and from the Canada-United States boundary to about 56° N. lat.

4. *The Western Fishing, Mining and Lumbering Region*, comprising the western portion of the province of Alberta, the whole of British Columbia and the southern portion of Yukon.

5. *The Northern Fishing and Hunting Region*, extending from the regions of permanent settlement northwards, and from the boundary of Labrador to the Pacific and to the Alaskan Boundary. This vast region is sparsely inhabited by indigenous nomadic tribes engaged in fishing and hunting for their own support or for exchange with the fur-trading companies, and with individual whalers and traders who visit the region.

Great differences exist between the products of these various regions; even the fisheries and lumber products of the east are quite distinct from those of British Columbia. The needs of the people throughout the country are met to a great extent by the exchange of the products of one region for those of another.

Interprovincial trade in what is now Canada had its beginning, many years before Confederation, in the exchange of the furs and lumber products of Upper and Lower Canada for the fisheries and mineral products of the Maritimes. Indeed, it was thought at the time of Confederation that the coal fields of Nova Scotia would furnish sufficient fuel for the needs of all the eastern part of the Dominion. Later, manufacturers of Ontario and Quebec found markets from one end of the Dominion to the other in exchange for the farm, mineral and other products required by large urban communities and produced principally in western and northern regions. Thus the principle of comparative advantage is seen operating in the increased trade between the economic regions of the Dominion, a trade which is principally

* Revised by G. S. Wrong, B.Sc., Chief of the Transportation Branch, Dominion Bureau of Statistics.

carried on over the railways of the country, but also largely over its waterways. A comparatively new development is the inauguration of sea transport between Eastern Canada and British Columbia *via* the Panama Canal. (See pp. 754-755.)

A monthly railway traffic report is published by the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics showing, for each province and for the Dominion as a whole, the total *revenue* freight traffic of all railways (not the "on company service" freight), divided into 76 classes of commodities. The data also show the quantity of each class that originated and terminated in each province, and are of use in computing the imports and exports of each province for each of the 76 classes of commodities. These statistics show rail traffic only, a limitation which should be borne in mind in connection with the trade of provinces having water transportation. Summary figures for all commodities are given in Table **1**.

The revenue freight traffic movement on the steam railways of Canada fluctuates to a certain extent with the yield of the crops and with activity in the mining and construction industries involving heavy movements of low-grade freight. The general trend from 1921 to 1928 was upward, increasing from 83,814,436 tons of freight carried in 1921 to 119,227,758 tons in 1928. In 1929, however, a decrease to 114,600,778 tons and in 1930 a further decrease to 95,833,228 tons were reported and, with the continued industrial depression, there have been still greater decreases to 73,837,245 tons in 1931, to 60,468,093 tons in 1932 and to 57,099,111 tons in 1933, but latest figures indicate a rise to 67,681,499 tons in 1934.

Statements similar to that in Table **1** may be compiled for any of the 76 commodities for which statistics are collected, showing the interprovincial trade by rail in these commodities. For details see "Summary of Monthly Traffic Reports of the Railways of Canada, 1933", obtainable from the Dominion Bureau of Statistics.

Totals	**40,704,259**	**38,139,335**	**18,390,342**	**18,105,771**	**59,094,601**	**56,245,106**[1]

[1] The freight originating and that terminating will not agree because that which originates within a certain year does not all terminate within the same year. On the other hand some which terminated in 1933, for instance, originated within the previous year.

Section 2.—Grain Trade Statistics.*

The Canada Year Book, 1922-23, contained on pp. 581-583, an historical summary of the more important points respecting the shipment, inspection and sale of Canadian grain under the Canada Grain Act, and an outline of the Canada Grain Act of 1925 appeared at p. 1017 of the 1925 Year Book. The 1929 amendments were dealt with at pp. 1047-1048 of the 1930 Year Book, and the Canada Grain Act, 1930, at p. 1101 of the 1931 Year Book.

Movement of Canadian Wheat, Crop Year 1932-33.—For a description of the wheat crop movement in this year the reader is referred to the "Report on the Grain Trade of Canada for the crop year ended July 31, 1933," which may be obtained from the King's Printer, Ottawa, at a price of fifty cents. A chart illustrating this movement will be found on p. 644 following.

* Revised by Dr. T. W. Grindley, Chief, Agricultural Branch, Dominion Bureau of Statistics.

21. Values of crop $	154,760,000	75,988,000	18,855,000	1,682,000	2,284,000

Movement of Canadian Wheat, Crop Year 1933-34.—A résumé of the Canadian wheat movement naturally begins with a description of the crop of the Western Inspection Division. The wheat crop of 1933 marketed in the Western Division during the crop year from Aug. 1, 1933, to July 31, 1934, amounted to 264·3 million bushels. A carry-over of 172·9 million bushels from the previous crop year, together with some minor items, brought the stock of the Western Division to a total for the year of 437·0 million bushels. As for distribution, 260·8 million bushels were commercially disposed of, the chief items of which were 75·3 million bushels exported to the United Kingdom and 101·5 million bushels shipped to the Eastern Division. The direct exports to the United States were only 117 thousand bushels and to other countries 20 million bushels. The total shipments from the Western Division were thus 215·4 million bushels. The wheat used by the milling companies for the manufacture of flour amounted to about 17·1 million bushels, of which 12·7 million bushels were ground into flour for domestic consumption. The all-rail movement eastward from the Western Division, including shipments to the Ogilvie Flour Mills Co. at Fort William for grindings, was 201 thousand bushels. Lake shipments from Fort William and Port Arthur were 145·9 million bushels,

100·7 million bushels going to Canadian ports and 45·2 million to United States' ports. The shipments to Canadian and U.S. ports represented, respectively, a decrease of 21·1 p.c. and a decrease of 14·4 p.c. from 1932-33. The principal Canadian lake ports were those of lake Huron and Georgian bay, with receipts of 25·7 million bushels, and Port Colborne with 19·8 million bushels. Among the United States' lake ports, Buffalo was of chief importance in the handling of Canadian wheat, with receipts by water from Port Arthur and Fort William of 40·8 million bushels. The export of wheat through Vancouver was 45·4 million bushels, as compared with 96·4 million in the previous crop year; 2·8 million bushels were exported through New Westminster, and 2·7 million from Churchill. The seed requirements were estimated at 29·2 million bushels, feed for livestock and poultry at 9·3 million bushels, and the stocks at the end of the crop year were 158·6 million bushels.

The Eastern Division received during the crop year not only the eastern crop, estimated at 17·5 million bushels, but also shipments from the West aggregating 101·5 million bushels. The quantity on hand at the beginning of the crop year was 38·8 million bushels, making, with a comparatively small importation from the United States, a total stock entering the Eastern Division of 158·1 million bushels. The distribution included 35·3 million bushels carried over in store into the following year, 66·6 million bushels exported from the St. Lawrence ports, and 7·7 million bushels shipped through the winter ports of Saint John and Halifax. In addition, 44·6 million bushels were cleared for export to the United Kingdom and other countries *via* the United States' Atlantic ports. The chief ports concerned with the movement of Canadian grain from both Divisions were New York, Albany, Boston and Portland.

Total exports from Canada to the United States for consumption amounted to 218,814 bushels, to the United Kingdom 114·8 million bushels, to other countries 55·1 million bushels; 127·6 million bushels were shown to be shipped *via* Canadian ports and 42·3 million bushels *via* United States' ports, after deducting 2·3 million bushels transhipped from Buffalo to Montreal and adding the same to the Canadian movement. Total exports of wheat from Canada during the crop year amounted to 170·2 million bushels.

Table **3** shows, for the licence years 1933 and 1934, the number of railway stations at which elevators are placed, the number of elevators and their total storage capacity, the figures being given by provinces for each class of elevator, with a summary showing the total of all elevators for each province. The growth of Canadian elevators in number and capacity has accompanied the expansion of grain acreage in the present century. Canadian elevators in 1901 numbered 426 with a capacity of 18,329,352 bushels; in 1911 these had increased to 1,909 elevators and 105,462,700 bushels; and totals of 3,855 elevators and 231,213,620 bushels were reached in 1921. Further increases in the past few years have resulted in a total of 5,901 elevators with a capacity of 419,592,660 bushels in 1934.

Table **4** gives summary statistics of the inspections of grain for 1931-34, detailed statistics given in previous Year Books being omitted to save space. The latter may be found in the Reports on the Grain Trade of Canada.* Tables **5** and **6** show the shipments of grain by vessel and rail for 1933 and 1934.

Tables **7** and **8** deal with the Canadian grain handled in recent years at Eastern elevators, while Tables **9** and **10** show the average cost of delivering a bushel of wheat from the Canadian wheat producer to British ports, by both the Atlantic and Pacific routes.

* The latest report is for the crop year ended July 31, 1934, and may be obtained from the Dominion Statistician.

9.—Approximate Average Handling and Freight (c.i.f.) Charges Between the Producer in Western Canada and British Ports, per Bushel of Wheat Exported via Montreal-Sorel-Quebec, calendar year 1934.

Item.	Per bush.
	cts.
1. Handling at country elevator, (including insurance against loss by fire and storage for 15 days); official inward inspection, weighing and registration fees; and selling to exporter on Winnipeg market	3·75
2. Railway freight rate from average western point shipping to Fort William-Port Arthur terminal elevators	13·50
3. Handling at terminal elevator, (including insurance against loss by fire or explosion and storage for 15 days); official outward inspection, weighing and registration fees; and loading into vessel	1·50
4. Lake freight, Fort William-Port Arthur to Montreal-Sorel-Quebec, (including costs of trimming cargo, brokerage, lake and out-turn insurance, and any charges incurred for transfer of cargoes from upper lake to canal-size vessels)	6·40
5. Approximate average cost of freight and insurance (marine and out-turn), between Montreal-Sorel-Quebec and British ports, calendar year 1934, (including fobbing charges at Montreal-Sorel-Quebec)	6·35
Total approximate cost between producer and c.i.f. British ports, per bushel of wheat	31·50

10.—Approximate Average Handling and Freight (c.i.f.) Charges Between the Producer in Western Canada and British Ports, per Bushel of Wheat Exported via Vancouver-New Westminster, calendar year 1934.

Item.	Per bush.
	cts.
1. Handling at country elevator (including insurance against loss by fire and storage for 15 days); official inward inspection, weighing and registration fees; and selling on Vancouver market	3·75
2. Railway freight rate from average western point shipping *via* Vancouver-New Westminster terminal elevators	13·50
3. Handling at terminal elevator, (including insurance against loss by fire or explosion and storage for 15 days); official outward inspection, weighing and registration fees; and loading into vessel	1·50
4. Approximate average cost of freight and insurance (marine and out-turn) between Vancouver and British ports, calendar year 1934, (including fobbing charges at Vancouver)	11·75
Total approximate cost between producer and c.i.f. British ports, per bushel of wheat	30·50

Flour-Milling in 1933.—The flour and grist mills industry in Canada in 1933 showed an increase of 38 mills over 1932, but their capacity was reduced by 15,253 barrels of flour a day from the 1932 figure. Their capital investment was $59,054,505. The mills were distributed by provinces as shown in Table **11**. Statistics of the employees, value of products, etc., for both flour and feed mills, for the latest year available will be found in Table **7** of the chapter on manufactures, p. 462 of this volume.

Section 3.—Marketing of Live Stock and Animal Products.*

The estimated value of farm live stock and poultry in Canada in 1933 was $436,591,000, or 103·4 p.c. of the value of field crops grown during the year. In 1932 the value of farm live stock and poultry was $409,860,000 or 98·4 p.c. of the value of field crops during that year. In gross value of product the slaughtering and meat-packing industry, which is dependent chiefly on animal husbandry for its materials, has during recent years been one of the most important single manufacturing industries in Canada.

The Canada Year Book, 1922-23, contained on pages 594-595 a brief historical description of the development and present position of the live-stock industry in the Dominion, with statistics of farm animals compiled from the decennial censuses, 1871 to 1921. A summary of this data, with the addition of figures for 1931, is given in Table **12.**

*Revised by Dr. T. W. Grindley, Chief, Agricultural Branch, Dominion Bureau of Statistics. For more detailed information on this subject see "Live Stock and Animal Products Statistics", published annually by the Dominion Bureau of Statistics, also "Live Stock Market and Meat Trade Review", published annually by the Live Stock Branch of the Dominion Department of Agriculture. See also the material in Chapter VIII under the heading "Farm Live Stock and Poultry".

12.—Animals in Canada and Animals Killed or Sold by Farmers in Canada, by census years, 1871-1931.

Year.	Animals in Canada.			Animals Killed or Sold and Wool Sold.			
	Cattle.[1]	Sheep.	Swine.	Cattle.[1]	Sheep.	Swine.	Wool.
	No.	No.	No.	No.	No.	No.	lb.
1871	2,484,655	3,155,509	1,366,083	507,725	1,557,430	1,216,097	11,103,480
1881	3,382,396	3,048,678	1,207,619	657,681	1,496,465	1,302,503	11,300,736

1921[2]	8,519,484	3,203,966	3,404,730	1,616,626[3]	1,027,969[3]	1,779,257[3]	11,338,268
1931[2]	7,990,947	3,608,540	4,716,761	2,046,428	1,295,158	3,770,524	12,795,634

[1]Figures for 1871-91 do not include work oxen.

[2]Census taken as of June 1, while previous censuses were taken in April, so that the proportion of young animals is greater than for years previous to 1911.

[3]Animals slaughtered on farms were not included. The following figures are comparable with data given for the previous years (the 1911 amounts being partly estimated):—

	Cattle.	Sheep.	Swine.
1911	1,915,059	1,097,015	4,282,624
1921	2,097,390	1,217,987	2,972,331

In Table **13** statistics are given showing the numbers of animals on farms for the years 1921 to 1934, expressed as percentages of the average numbers for the quinquennium 1921-25.

13.—Index Numbers of Animals on Farms in Canada, calendar years 1921-34.

(Average number for 1921-25=100.)

Year.	Animals on Farms.				
	Horses.	Milch Cows.	Other Cattle.	Sheep.	Swine.
1921	105·1	99·9	110·6	121·4	88·9

[1]Figures revised since the publication of the 1933 Year Book.

Live-Stock Marketings, 1933.—The numbers of cattle and calves and sheep and lambs sold at stockyards showed increases in 1933 as compared with 1932. Cattle sold numbered 604,337 in 1933 and 569,633 in 1932, calves 317,334 and 300,176 and sheep and lambs 471,566 and 465,034, respectively. The total number of hogs sold in 1933 was 1,047,941, as compared with 1,212,821 in 1932. Two new stock yards figured in the 1933 receipts, *viz.*, Saskatoon Pool and Regina, and a few sales by live-stock brokers at North Battleford are also included in the totals for the year.

Table **14** shows the receipts for sale at the various stockyards and a partial disposition of the live stock sold in 1932 and 1933.

[1]Included with cattle. [2]Market opened in 1933.

The interprovincial and export movement of live stock in 1933 shows increases in all classes except hogs. Total shipments in 1933 with comparative figures for 1932 in parentheses were as follows: cattle 322,097 (261,915); calves 97,070 (91,165); swine 1,038,576 (1,121,760); and sheep 186,702 (153,259). For both years Alberta was the largest shipper in the aggregate and also the largest shipper of hogs and sheep. Saskatchewan led in cattle shipments and Ontario in shipments of calves.

The marketings of live stock through stockyards, by direct shipment to packers, or by export according to provinces of origin for the calendar year 1933 are given in Table **15.** In Table **16** are given the statistics of the grading of animals from several provinces marketed through the stockyards in 1933.

Slaughtering and Meat Packing.—This industry has become one of the most important branches of manufacturing in Canada. Its growth, shown by the statistics of Table **17**, has been accompanied by a concentration of the major part of the production of the industry into a comparatively small number of large establishments, thereby facilitating the utilization of by-products and greater efficiency of operation. In 1931, 1932 and 1933, the large increase in the number of establishments is due to the inclusion of wholesale butchers operating small plants engaged in slaughtering only. The addition of these small establishments does not affect

materially the value of production of the industry. The numbers of live stock slaughtered at Canadian inspected establishments in 1932 and 1933 are shown in Table 18.

Consumption of Animal Products.—The consumption of meats in Canada in 1933 is estimated at 599,145,695 pounds of beef, 796,541,284 pounds of pork and 67,532,961 pounds of mutton and lamb. The per capita consumption of beef on this basis amounts to 56·09 pounds; pork, 74·58 pounds and mutton and lamb, 6·32 pounds, a total of 136·99 pounds of meats per capita per annum. The corresponding data for other animal products are as follows: butter, 320,821,718 pounds and 30·04 pounds; cheese, 35,255,660 pounds and 3·30 pounds; eggs, 229,146,612 dozen and 21·45 dozen, and poultry 114,144,900 pounds and 10·68 pounds. Details are given in Table 19.

Interprovincial and International Trade in Meats.—The shipments of meats and meat products out of each province to other provinces and for export are shown in Table **20.** Manitoba was the largest shipper in the aggregate.

Information regarding this traffic may be found in greater detail at pp. 50-59 of the report on "Live Stock and Animal Products Statistics, 1933", obtainable on application to the Dominion Bureau of Statistics.

20.—Provincial Shipments of Meat Products, with Total Interprovincial and Export Shipments, calendar year 1932.

[1]Includes miscellaneous products not specified.

Export and Import Trade in Live Stock and Live-Stock Products.—The exports of live stock and live-stock products from the Dominion to the United Kingdom, the United States and all countries, are shown for the four fiscal years ended Mar. 31, 1931-34, in Table **12** of the chapter on External Trade, at pp. 566-572,

and imports in Table **13** at pp. 590-594. Exports and imports are also available by calendar years 1927-1933, and may be found at pp. 81, 83 and 84 of the report on "Live Stock and Animal Products Statistics, 1933". At pp. 75-95 of the report on "Trade of Canada (Imports for Consumption and Exports), Calendar Year 1933" figures are given of exports of "Animals and Animal Products" for 1932 and 1933 and imports of this class for the same calendar years will be found at pp. 198-220 of the same report.

Section 4.—Cold Storage.

Cold Storage Warehouses.—Under the Cold Storage Act, 1907 (6-7 Edw. VII, c. 6), now consolidated as c. 25, R.S.C., 1927, subsidies have been granted by the Dominion Government towards the construction and equipment of cold storage warehouses open to the public, the Act and regulations made thereunder being administered by the Department of Agriculture. Table **21** shows for 1933 and 1934 the number of cold storage warehouses in Canada, with the refrigerated space.

21.—Cold Storage Warehouses in Canada, by Provinces, 1933 and 1934.

NOTE.—The figures in this table are supplied through the courtesy of J. F. Singleton, Dairy and Cold Storage Commissioner, Dominion Department of Agriculture.

[1]To October 31st.

Cold Storage Stocks.—Statistics of the stocks of food in the cold storage warehouses of Canada are collected and published monthly by the Agricultural Branch of the Dominion Bureau of Statistics. A summary of the cold storage data is included in the report on "Live Stock and Animal Products Statistics", published annually. In Table **22** are included statistics by months, for 1933 and 1934, of the stocks of food in cold storage and in process of cure for various important commodities.

22.—Stocks of Food on Hand in Cold Storage and in Process of Cure, by Months and Commodities, 1933 and 1934.

NOTE.—Figures in this table are of stocks on hand on the first of each month as published by the Agricultural Branch, Dominion Bureau of Statistics.

Section 5.—Bounties.*

In cases where it is considered advisable for the Government to encourage the production of a particular commodity, bounties paid by the Government are recognized substitutes for protective duties. In the past they have been made use of by Canada to a considerable degree, but the only bounties which involved payments in the last few years were those on copper bars and rods, hemp and bituminous coal mined in Canada and used in the manufacture of iron or steel. The Copper Bounty Act expired on June 30, 1931 and the Hemp Bounty Act expired on Dec. 31, 1932. The bounty on bituminous coal was the outcome of a recommendation of the Royal Commission on Maritime Claims relating to the use of Canadian coal in the manufacture of iron and steel.

The amounts of the above bounties paid in recent fiscal years have been as follows:—

Copper Bounties Paid in—		
1924-25	1,164,140 lb. at 1¼c	$ 14,551·75
1925-26	1,482,267 lb. at 1c	14,822·67
1926-27	9,326,360 lb. at 1c 9,463,826 lb. at ¾c	164,242·30
1927-28	6,923,478 lb. at ¾c 5,578,693 lb. at ½c	79,819·16
1928-29	13,772,877 lb. at ½c	68,864·40
1929-30	6,507,212 lb. at ½c	32,536·07
1930-31	17,739,497 lb. at ½c	88,697·46
1931-32	29,645,832 lb. at ½c	148,229·12
Totals	101,604,182 lb.	$ 611,762·93
Hemp Bounties Paid in—		
1927-28	19,048 lb. at 1½c 50,508 lb. at 1⅜c	$ 2,987·70
1928-29	6,579 lb. at 1⅜c 826,821 lb. at 1¼c	10,425·70
1929-30	666,113 lb. at 1⅛c	7,493·77
1930-31	348,345 lb. at 1c	3,483·14
1931-32	250,280 lb. at ⅞c 17,193 lb. at ¾c	2,318·90
1932-33	18,306 lb. at ¾c	137·30
Totals	2,203,193 lb.	$ 26,846·82
Coal Bounties Paid in—		
1930-31	273,148 tons at 49½c	$ 135,209·23
1931-32	126,356 tons at 49½c	62,546·18
1932-33	118,783 tons at 49½c	58,797·54
1933-34	213,841 tons at 49½c	105,851·25
1934-35 to August 31/34	84,189 tons at 49½c	41,673·54
Totals	816,317 tons	$ 404,077·74

Bounties have been paid at various times in the past on iron and steel, on lead, on crude petroleum, on manila fibre, on zinc and on linen yarns, but the bounties on iron and steel ceased in 1911, on lead in 1918, on zinc in 1921, on linen yarns in 1923 and on crude petroleum in 1927. The total amounts paid in bounties on these commodities between 1896 and the date of expiration were: iron and steel, and manufactures of (1896-1912), $16,785,827 (Canada Year Book 1915, p. 460); lead (1899-1918), $1,979,216 for 1,187,169,878 lb.; zinc, $400,000; linen yarns, $17,523; manila fibre (1903-1913), $367,962; crude petroleum (1905-27), $3,457,173 on 233,135,217 gallons. (For quantities of crude petroleum and bounties paid in each year, see table on p. 635 of the 1927-28 Year Book.) Total payments for expired bounties between 1896 and 1932 aggregated $23,007,701, which, with the

*Revised by L. T. Lett, Chief Accountant, Department of Trade and Commerce.

$611,763 paid on copper bars and rods and the $26,847 for hemp and the $404,078 for coal, make a total of $24,050,389. The Year Book of 1915, pp. 459-461, gave a description of the bounties that had been payable since 1883, as well as tables showing, for each commodity, the quantities on which bounties were annually paid and the amounts of such bounties for the years 1896 to 1915 inclusive. For details of the bounties on zinc, see p. 635 of the 1927-28 Year Book.

Section 6.—Patents, Copyrights, and Trade Marks.*

Patents.—Letters patent, which in England have been in the gift of the Crown from the time of the Statute of Monopolies and earlier, are a purely statutory grant in Canada and have always been so. The earliest Act was one of Lower Canada, passed in 1824, wherein provision was made for the granting of patent rights to inventors who were British subjects and inhabitants of the province. Upper Canada passed its Act in 1826, and Nova Scotia and New Brunswick passed theirs at later dates. In 1849, after the Union, a consolidating Act was passed applying to both Upper and Lower Canada, and the B.N.A. Act assigned the granting of patents exclusively to the Parliament of Canada. The Dominion Patent Act of 1869 repealed the provincial Acts and has formed the basis of all succeeding Acts.

The first Canadian patent was issued under the Lower Canada Act of 1824 to Noah Cushing of Quebec; 165 patents were granted under the Acts of Upper and Lower Canada, and, under the consolidating and later Acts of the provinces 3,160 patents were granted.

Letters patent are now issued subject to the provisions of Chapter 150, R.S.C., 1927 (as amended by c. 4, 1928, c. 34, 1930, and c. 21, 1932), and application for protection relating to the same should be addressed to the Commissioner of Patents, Ottawa, Canada.

Invention means any new and useful art, process, machine, manufacture or composition of matter or any new and useful improvement in any art, process, machine, manufacture or composition of matter.

The growth of Canadian inventions is shown by the fact that an average of 1,422 patents was issued annually to Canadians during the decade 1920-29. The business of the Office has continued to expand gradually. The number of applications and total fees increased each year without a break from the beginning of the present century until the fiscal year ended Mar. 31, 1913, when 8,681 applications were received and the total fees amounted to $218,125. In the fiscal year ended Mar. 31, 1934, there were 9,267 applications, with fees amounting to $362,146, as compared with 10,145 and $393,067, respectively, in 1933. For the fiscal year ended Mar. 31, 1934, the number of patents granted was 9,124 as compared with 10,241 in 1933, a decrease of 1,119. Of the patents of 1934, 5,998 or 66 p.c. were issued to United States' inventors, 982 to Canadians and 804 to residents of Great Britain and Ireland, while Germany with 566, France with 175, Holland with 97 and Sweden with 91 came next in the number of inventors to whom patents were issued.

*Revised by J. T. Mitchell, Acting Commissioner of Patents, Ottawa.

It will be seen from the table that the more populous provinces of Ontario and Quebec obtained the largest absolute number of patents, but a calculation of the number of patentees in relation to population shows that, for the fiscal year 1934, the greatest relative inventiveness was displayed in British Columbia, with one patent granted for every 6,971 persons, while Ontario had one for every 7,507 persons and Quebec one for every 12,805 persons.

As will be seen from Table **24** the increased activity in invention which was manifested during the fiscal year ended 1929 was still more marked in the fiscal year ended 1930; there has been a decline in each year since then. Apparently the industrial depression has extended its baneful influence over this field also. In the latest year applications for patents were distributed pretty well over the whole field of invention without showing outstanding trends along any particular lines.

24.—Statistics of Patents Applied for, Granted, etc., fiscal years ended Mar. 31, 1929-34.

Copyrights and Trade Marks.—Registration of copyright is governed by c. 32, R.S.C., 1927, and an application for protection relating to same should be addressed to the Commissioner of Patents, Ottawa, Canada.

The Copyright Act of 1921 (amended in 1923 and consolidated in c. 32, R.S.C., 1927) sets out in Section 4 the qualifications for a copyright and in Section 5, its duration: "Copyrights shall subsist in Canada . . . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the (Berne) Convention and the additional Protocol . . . . or resident within His Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death".

Copyright protection is extended to records, perforated rolls, cinematographic films and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection throughout all parts of His Majesty's Dominions, foreign countries of the Copyright Union, and the United States of America, as well as in Canada.

The Trade Mark and Design Act (c. 201, R.S.C., 1927) was amended by c. 10 of the Statutes of 1928, bringing the Act into agreement with the terms of the Convention for the Protection of Industrial Property, as amended at The Hague in 1925 with regard to refusal to register certain trade marks. The renewal of expired trade mark registration was also provided for, while it was also enacted that in certain cases interested parties might apply to the Exchequer Court of Canada for the cancellation of a trade mark at any time within three years from its registration. The Unfair Competition Act, 1932, (22-23 Geo. V, c. 38), repealed all parts of the above Act relating to trade marks and all trade marks are now registered under and protected by the new Act.

25.—Statistics of Copyrights, Trade Marks, etc., fiscal years ended Mar. 31, 1929-34.

Section 7.—Weights and Measures.*

The object of weights and measures administration is to maintain uniformity and accuracy in the use of the legal standards of the country in industry and commerce, to protect the public from short weight and measure and the trading community from unfair competition arising from such practices.

Prior to Confederation, the administration of weights and measures was in the hands of each Provincial Government but passed to the Dominion Government in 1867, under Section 91 of the British North America Act. Steps were then taken to simplify the standards in use and to establish uniformity throughout the Dominion.

What might be termed the principal Weights and Measures Act of Canada was passed in the session of 1872-73; its provisions closely followed English weights and measures law, but the system of weights and measures was greatly simplified. This Act established as the primary legal standards for Canada the imperial pound, gallon and yard, but in place of the system of stones, quarters, hundredweights (112 lb.) and the long ton (2,240 lb.) it provided a decimal series of weights, 1, 2, 3, 5, 10, 20, 30, 50, 100 lb., and the short ton of 2,000 lb. The only exceptions to this were the continued use of the old French land measure, the arpent, in Quebec, and the use of the long ton (2,240 lb.) in the coal-mining industry, but not for the retail sale of coal. The troy ounce of 480 grains and its decimal submultiples are the legal weights for the weighing of gold and precious metals. The metric system is legal for all transactions.

Many changes, deletions and additions have been made to the Act of 1873 by later legislation, but its principles remain unchanged. The latest legislation is the Weights and Measures Act (c. 212, R.S.C., 1927).

The Weights and Measures Service was first administered by the Department of Inland Revenue, and offices were opened in all the principal centres of Canada and equipped with standards and inspection equipment. In 1918 the Service was transferred to the Department of Trade and Commerce. For purposes of administration, the Dominion is divided into 18 districts, each in charge of a district inspector. The chief rules of administration are as follows:—

(a) Every new type of weighing and measuring device must be submitted to the Department at Ottawa for approval before being placed on the market.

(b) Every new machine must be inspected and stamped by an inspector before being sold or taken into use.

(c) Imported machines are held by the customs until release is approved by the nearest inspector.

(d) All inspections take place on the traders' premises, except where devices are brought to the inspection offices.

(e) Fees are charged for inspection and stamping, the schedule being defined by Order in Council, and all moneys so collected are paid into the Consolidated Revenue Fund of Canada.

The following table is a summary of the articles and machines inspected in the fiscal years ended Mar. 31, 1933 and 1934. The total revenues collected by the Service in the fiscal years ended 1933 and 1934 amounted to $394,222 and $399,717, respectively, while the expenses, including salaries, totalled $306,158 and $236,667, respectively.

*Revised by E. O. Way, Director of Weights and Measures, Department of Trade and Commerce.

Section 8.—Electricity and Gas Inspection.*

The Electricity and Gas Inspection Branch of the Department of Trade and Commerce administers three Acts: the Electricity Inspection Act (c. 22, 1928), the Gas Inspection Act (c. 82, R.S.C., 1927), and the Electricity and Fluid Exportation Act (c. 54, R.S.C., 1927).

The latest report of the Branch shows 402,662 electricity and gas meters tested in the fiscal year ended Mar. 31, 1934, as compared with 439,334 in the preceding year. The total revenue derived from electricity and gas inspection was $271,203, as compared with an expenditure of $200,593. The Branch also collected $245,274 as export duty and licence fees under the provisions of the Electricity and Fluid Exportation Act; the cost of collecting this revenue was only $302.

Other related statistics collected in the administration of the last-named Act will be found on p. 430, in the Water Power chapter of the Year Book. Here, however, are given statistics, also collected by the Branch in the process of administration, showing a phenomenal increase in the number of consumers of electricity in the past 20 years, from 505,597 to 1,720,997 (Table **28**); a lesser increase in the gas meters in use from 267,454 in 1916 to 657,612 in 1934 (Table **29**); and the number of cubic feet of gas sold in Canada from 1920 to 1934 classified as carburetted water gas, coal gas, coke oven gas, natural gas, acetylene gas and butane (Table **30**).

*Revised by J. L. Stiver, Director, Electricity and Gas Inspection Service, Department of Trade and Commerce.

Section 9.—Census of Merchandising and Service Establishments.*

A comprehensive survey of business carried on by trading and service establishments was undertaken for the first time in connection with the Seventh Decennial Census in 1931. A partial census of trading establishments only had been made in 1924, but the results of this initial survey, while indicative of the extent of domestic trade, suffered from the incompleteness of the canvass made at that time. The Census of Merchandising and Service Establishments, 1931, covered not only the operations of retail and wholesale merchandising establishments in 1930, but also those of service establishments, including hotels. In addition, information was collected to show the manner in which goods manufactured in Canada are distributed. Preliminary figures for the census were issued in several series of mimeographed bulletins, while the final results are being published in a series of provincial reports.

An outgrowth of the Census of Merchandising and Service Establishments has been an annual survey of retail and wholesale trade based on the reports of all chain stores and of the larger independent stores having an annual turnover of $30,000 or more in 1930 ($20,000 or more in the case of food stores or country general stores). While the annual figures for merchandising are not based on such a comprehensive survey as that made in connection with the decennial census, and are thus *estimates based on a sample of from two-thirds to 70 p.c. of the whole field,* they provide the most reliable indicators available of recent trends in merchandise trade.

Retail Merchandise Trade, 1930-1933.—On the basis of the results of the annual Census of Merchandising and Service Establishments, to which reference has already been made, the retail merchandise trade in Canada during the year 1933 is estimated at $1,776,884,000, compared with $2,755,569,900 in 1930. (See Table **31.**) While the decline in all lines of trade combined was thus 35·5 p.c., some kinds of business show much heavier losses than others. How much of the decrease is due to the decline in prices and how much to a reduction in the physical volume of trade, it is not possible to say. The food and general merchandise groups show the least loss in dollar sales, while the largest declines are shown for the retail establishments specializing in building materials and furniture and household goods.

Among the provinces, Saskatchewan has suffered the most severe decline in business, followed by Alberta and British Columbia. If the year-to-year changes in the volume of business are compared, it will be found that in the Prairie Provinces the greatest decline during the period took place in 1931, while for all other provinces the year 1932 shows the largest losses. In all provinces the decline in 1933 was less than in either 1931 or 1932.

* Prepared by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics. For a list of publications of this Branch, see Chapter XXIX, Section I, under "Internal Trade".

Subsection 1.—Wholesale and Other Bulk or Non-Retail Merchandising, 1930.

The wholesale field, as defined for the purposes of the census, embraces many types of establishments other than those generally classed as wholesale houses. Thus, under this heading of bulk merchandising, will be found not only the conventional types of wholesalers selling to retailers but also other establishments engaged in handling or arranging for the sale of commodities, or the transfer of rights, etc., on a non-retail basis, whether for domestic or foreign trade. In the tables presented below will be found the salient features of the operations of such classes as importers, exporters, commission merchants, brokers, etc., as well as the business of wholesale merchants. It should also be noted that the business of such establishments as bulk tank stations and manufacturers' sales branches is not included with that of the wholesale merchants, although a considerable part of the trade of these establishments is done with retailers.

There were 13,140 wholesale and other bulk or non-retail merchandising establishments in Canada in 1930. The total net sales for these establishments were $3,325,210,300. This trade was concentrated, to a marked degree, in certain well-defined trading areas. Of the above total sales 30·49 p.c. were made by establishments in Ontario, 27·21 p.c. by those in Quebec, and 20·12 p.c. by those in Mani-

toba. In fact, approximately two-thirds of the entire trade was carried on by establishments located in the four cities of Montreal, Toronto, Winnipeg and Vancouver.

As already suggested, the bulk and non-retail merchandising field embraces many types of establishments, so that the amount of trade attributed to this field cannot be compared directly with the amount of retail business. A certain amount of business is transacted between bulk merchandising establishments, especially with respect to agents, brokers, and commission houses, and sales are made, by or through many wholesalers establishments, to manufacturers or other industrial consumers. In addition, some of these establishments are engaged in trading with foreign countries. Thus allowances must be made for the duplication in bulk and non-retail merchandising, for the sales of raw materials, for direct sales to consumers and for export business. In order to give a rough indication of the amount of pre-retail business, bulk merchandising establishments have been divided into two classes, "wholesalers proper" and "other bulk or non-retail distributors". The first class consists of those establishments which are carrying on the more conventional form of wholesale trading. The sales made by 5,108 wholesalers proper in 1930 were $1,111,319,200, of which $887,878,600 were made by wholesale merchants. Other types of bulk or non-retail distributors, consisting of 8,032 establishments, made sales or arranged orders to the value of $2,213,891,100. It will be noted from Table **32** that, while the province of Manitoba had 20·12 p.c. of the total sales of all bulk merchandising, the business of wholesalers proper in Manitoba was only 7·15 p.c. of the total for Canada. This marked difference is due to the influence of the grain trade, which is such an important factor in the commerce of that province. The trade in grain is carried on mainly by establishments classified under "other bulk distributors" and appears, therefore, only in the all-inclusive figures of Table **32.**

Subsection 2.—Retail Trade.

While by far the greater part of retail trade is handled by retailing establishments, a considerable amount of retail business is conducted through other channels. The total value of the known retail trade in 1930 is shown in Table **34.** The retail trade not included in this table consists for the most part of unrecorded sales by farmers and other producers directly to householders. In order to provide an indication of the purchasing power in each province, the average sales per household have been calculated. It should be borne in mind that the merchandise trade includes mail order sales, which may be made to persons outside of the province in which the mail order house is situated. The average sales per household tend to be highest in the provinces with the highest proportions of urban population and lowest in those provinces with the largest relatively rural populations.

Summary of Merchandising and Services.—The line of demarcation between these two classes of retailing cannot be sharply drawn. In many service establishments, especially those of the repair group, the retail sale of commodities is also carried on. Conversely, a great many stores, chiefly engaged in retail merchandising, have service departments for making alterations and repairs, for hairdressing and other personal service, for cleaning, decorating, fur storage, etc. Establishments where both these functions are carried on have been classified according to the function which provided the largest receipts. For the sake of convenience, the fields are summarized by provinces and business groups in Table **35.**

Retail Merchandising by Provinces.—The total sales made by 125,003 retail merchandising establishments in Canada in 1930 were $2,755,569,900. In addition to these sales, the manufacturing bakeries and dairies reported retail sales of $80,524,179, included in total retail trade (see Table **34** and chart on p. 673) but omitted in the figures of Table **36.** Ontario led in amount of business with 39·92 p.c. of the total sales, although only 33·07 p.c. of the population of the Dominion resided in this province in 1931. On a per capita basis, retail merchandise sales show wide differences between provinces. The average for Canada on the basis of the 1931 population was $265.55, but the per capita sales in Prince Edward Island were $156.45, and in British Columbia $358.07. It should be noted, however, that in these figures no allowance is made for the mail order or other sales outside the province.

In Table **37** retail stores have been grouped according to the value of net sales in 1930. Of the total number of stores classified in this way, 38·38 p.c. had sales of less than $5,000 in 1930, while 18·21 p.c. had sales between $5,000 and $9,999. The combined sales of these two groups formed less than 10 p.c. of the total sales in that year. On the other hand, there were only 86 stores with a turnover of $1,000,000 or more, but these establishments handled 14·25 p.c. of the total retail merchandise trade. These very large stores are found chiefly in the general merchandise and automotive groups.

Table 37.—Total Retail Merchandising Establishments Grouped According to Annual Net Sales, with Numbers and Proportions of Full-Time Employees, Stores and Sales in Each Class, and Average Number of Employees per Store, 1930.

[1]In some cases only the net sales for a group of stores were reported instead of the volume of business for each unit. The figures for such establishments have not been included in the above table.

More than 16 p.c. of the total sales in 1930 were made by stores in the general merchandise group. The most important kinds of stores in this group were the department stores and the variety stores. The sales of food stores, of which the most numerous and important are the grocery stores, formed 22·33 p.c. of the total, while those of the automotive group accounted for 13·86 p.c. While such proportions are indicative of the sales of commodities, they do not furnish an accurate guide to commodity sales. Few stores restrict their sales to one line of goods and some kinds of stores handle a wide variety of merchandise. Department and general stores, as is well known, deal in many commodities, but there are other stores which also carry many lines of goods. The figures that are given in Table 38 show the retail merchandise trade by groups and kinds of business.

Retail merchandising in Canada is analysed by type of operation in Table **39.** This analysis is first applied to all retail stores and, following this, to some particular kinds of retail business which have been most subject to chain system organization. Single stores under independent ownership accounted for 70·44 p.c. of the total retail merchandise sales in 1930. Included in this percentage are the sales of single stores in voluntary chains or co-operative buying organizations, which amounted

to 4·32 p.c. of the total. The sales of the units of provincial, sectional and national chains were 16·53 p.c. of the total and those of local chains 2·55 p.c. Two- and three-store multiples accounted for 7·98 p.c. of the total sales. For certain of the larger cities, the business of department stores belonging to national organizations has been taken with that of independent stores.

Retail Merchandise Trade of Canadian Cities.—The retail merchandise trade in Canadian cities of over 10,000 population is shown in Table **40.** The cities are arranged in descending order according to their 1931 census populations. A notable feature of these figures is the wide variation in different cities in the relationship between population and retail sales. In general, per capita sales are high for cities which form distributing centres for large or populous areas, while such sales are lowest in residential or industrial satellite cities adjacent to larger centres, as in the case of St. Boniface, Man., Sandwich, Ont., and Verdun, Outremont, Westmount and Hull, Que.

Retail Sales, by Commodities.—The calculation of the value of sales by commodities presents tremendous difficulties, as so few stores keep any records of their sales in various lines of merchandise. On the basis of the information returned for the Census of Merchandising and Service Establishments, Table **41** has been constructed to show the value of retail sales for broad commodity groups. It should be understood, however, that the figures are estimates only. The table includes retail sales by hotels, manufacturing bakeries and dairies, as well as the commodity sales of retail merchandising and service establishments. The sale of food and kindred products forms the largest single commodity group, as the value of goods sold is 29 p.c. of the total commodity sales.

41.—Estimated Retail Sales and Percentages of Total, by Commodities, 1930.

Commodity.	Estimated Sales.	Per cent of Total.
	$	p.c.
Apparel, women's, misses' and children's (except shoes)	196,958,000	6·90

All other merchandise (including tobacco)	201,424,000	7·05
Receipts from sale of meals	108,615,000	3·80
Totals, All Commodities	**2,855,290,000**	**100·00**

Employment and Wages.—The labour force engaged in retail merchandise trade numbered 400,628 persons in 1930. This includes proprietors actively engaged in retailing and full-time and part-time employees. The salaries and wages of full-time and part-time employees are shown separately in Table **42** and also the withdrawals of those proprietors who reported receiving a fixed salary. It will be noted that only a few of the total proprietors draw fixed salaries each month from their businesses; the majority do not limit themselves to fixed amounts.

Service Establishments.—The 42,223 service establishments from which reports were secured had receipts of $249,455,900 in 1930. The professional services, such as medicine, dentistry or law, were not included in the census, nor were the building trades, such as carpentry, tinsmithing, etc. A special report has been prepared for hotels and the figures for these establishments are not included in the tables that follow. The provincial distribution of retail services in Canada during 1930 is shown in Table **43.** Ontario again led in the amount of business with 43·86 p.c. of the total service receipts, while Quebec came second with 25·49 p.c.

Among service establishments, the amusements group was the most important, 21·34 p.c. of the total receipts being reported by establishments of this class. Of the receipts of $53,231,500 for amusement establishments, $38,479,500 was secured by motion picture houses. The next group in importance was that of storage and transportation, which includes carting and storage, taxi and motor transportation. The barber shops were the most important section of the personal service group and did more than twice as much business as hairdressing and beauty parlours. The repair and service group had the largest number of establishments. Blacksmith

shops were the most numerous, their receipts being only slightly less than the total for boot and shoe repair shops. Repair and service shops for motor vehicles formed an important section of this group.

Detailed Statistics of Business Services.—The salient features of the business of service establishments are given in Table **45**, which also shows the type of operation, *i.e.*, the extent to which these establishments operate independently or are organized in chain systems. Of the total of 42,223 establishments, there were 40,964 under independent operation, while the receipts of single independent establishments formed 74·79 p.c. of the total of all receipts for services. Except in the case of theatres, which are separately analysed in the table, chain systems were not an important factor in the service field.

CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS.

Canada is a country of continental dimensions, nearly 4,000 miles in length from east to west, with its relatively small population of 10,835,000 (estimated population as at June 1, 1934) in the main thinly distributed along the southern borders of its vast area. Different parts of the country are shut off from each other by areas which are almost wildernesses, such as the region lying between New Brunswick and Quebec and the areas north of lakes Huron and Superior, the last dividing the industrial region of Ontario and Quebec from the agricultural areas of the prairies. To such a country with such a population, producing, like our western agriculturists, mainly for export, or, like our manufacturers, largely for consumption in distant portions of the country itself, cheap transportation is a necessity of life. Before 1850, when the water routes were the chief avenues of transportation and were closed by ice for several months each year, the business of the central portions of the country was reduced to a state of relative inactivity during the winter. The steam railway was therefore required for the adequate economic development of Canada, more particularly for linking up with the economic and industrial world the vast productive areas of the Canadian West, and thus promoting their development. The construction of the Canadian Pacific Railway gave to Canada, as an economic unit, length; the building of the newer transcontinental railways has given the country breadth.

Railway transportation, though essential, is nevertheless expensive, particularly in post-war years, and for bulky and weighty commodities. Hence new enterprises have either been undertaken or are under consideration for improving water communication, such as the new and deeper Welland canal, the deepening of the St. Lawrence canals and of the channel between Montreal and Quebec, and the development of the Hudson Bay route.

Problems of transportation are, therefore, of vital importance in the economic life of Canada, occupying a large part of the time and thought of our Parliaments and public men. Scarcely less important, from the social and economic points of view, is the development of methods of communication in a country so vast and so thinly peopled. The Post Office has been a great though little recognized factor in promoting solidarity among the people of different parts of the Dominion, while telegraphs and telephones have gone far to annihilate distance; the rural telephone, in particular, has been of great social and economic benefit in country districts. The use of the automobile has also been of great benefit in promoting social intercourse and in facilitating the transaction of business among the dwellers of both urban and rural districts. The press, again, assisted by cheap telegraph and cable rates, and reaching, through the mails, all parts of the country, has been of use in developing national sentiment. To sum up, it may be said that the progress of modern inventions, not least among which is the radio, has greatly improved living conditions in both rural and urban communities throughout the Dominion.

Part I of this chapter includes a statement of the tendencies toward monopoly which have made it necessary to establish a measure of government control over those transportation and communication agencies which are not governmentally-owned and operated; to this is added an account of the origin and functions of the

Board of Railway Commissioners. The subsequent parts deal in order with steam railways, electric railways, express companies, roads, motor vehicles, air navigation, canals, shipping, telegraphs, telephones, radio and the Post Office.

PART I.—GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION AND COMMUNICATION.

Private enterprises engaged in the transportation and communication business in Canada have, in the past 50 years, shown the same tendency toward consolidation and amalgamation which has been evident elsewhere throughout the civilized world. The basic reason for such consolidation and amalgamation has been the fact that the business of transportation and communication is, generally speaking, a "natural monopoly", *i.e.*, a type of enterprise in which service can be more efficiently and economically rendered to the public where one or a few concerns control a particular type of service throughout the country. The outstanding example of these consolidations in Canada in our time is the concentration of control of the railways of the country in the hands of the Canadian Pacific Railway Company and the Canadian National Railway Company.

However, since such control brings with it an element of monopoly and possible overcharge which is distasteful to the public, it has been deemed advisable in Canada, as in other countries, to set up authorities controlling the rates to be charged and the other conditions on which services to the public are to be rendered by common carriers. This control, so far as railways within the jurisdiction of the Dominion Government are concerned, has been placed in the hands of the Board of Railway Commissioners, whose authority has been extended to cover various other means of transportation and communication. A brief summary of the history and functions of this body follows on pp. 693-694.

Besides the Board of Railway Commissioners, dealing with the larger public utilities coming under the jurisdiction of the Dominion Government, there exist, in several of the provinces, bodies which undertake among their duties the supervision and control of local public utilities operating under the jurisdiction of the provinces, and the regulation of their rates for service. Among these is the Railway and Municipal Board of Ontario, established in 1906, which controls the construction, operation and maintenance of railways, and the approving of their rates and their rules and regulations affecting the public. Similarly, in Quebec, a Commission of Public Utilities was established in 1909 and was given superintendence over all Quebec corporations, other than municipalities, "that own, operate, manage or control any system, works, plant or equipment for the conveyance of telegraph or telephone messages or for the conveyance of travellers or goods over a railway, street railway or tramway, or for the production, transmission, delivery or furnishing of heat, light or power, either directly or indirectly to or for the public". In Nova Scotia there is a Board of Commissioners of Public Utilities and in Manitoba a Public Utilities Commission with similar functions, while in the three westernmost provinces these same duties are performed by provincial Departments of Railways.

Due to changing conditions and increasing complexities in the transportation field, the Dominion Government appointed in 1931 a Royal Commission to inquire into the whole problem of transportation in Canada, particularly in relation to railways and shipping and communication facilities, having regard to present conditions and the probable future development of the country. (See pp. 648–50 of the 1933 Year Book.)

The Board of Railway Commissioners for Canada.*

In the early days of railway building in Canada, the provinces were more concerned with rapid development than with rate regulation. Under the Railway Clauses Consolidation Act of 1851, rates were fixed by the directors of the railway, subject to the approval of the Governor in Council. Beyond this, competition was relied upon to bring rates to a reasonable level. As time went on, however, those who believed in the efficacy of competition as a regulator were disillusioned. For example, complaints were made that the Grand Trunk gave low through transit rates, say from Chicago to New York, through Canada, and recouped itself by high non-competitive rates in Upper Canada. In 1888, the supervision of rates was assigned to the Railway Committee of the Privy Council, sitting in Ottawa.

At the turn of the century, two reports were prepared for the Department of Railways and Canals by Prof. S. J. McLean, the first setting down the experience of railway commissions in England and the United States, and the second discussing Canadian rate grievances, with a recommendation that regulation by commission be adopted in Canada. The second report found that non-competitive rates were exorbitant as compared with competitive rates and that the railways had exercised their right to vary rates without notice, to the great distress of shippers. Among the weaknesses of the Railway Committee as a rate-regulating body was its fixed station at Ottawa, which made the cost of appearing before it practically prohibitive. Besides, members of Parliament had no necessary aptitude for dealing with railway rates, and of their two functions—legislative and administrative—the legislative was to them the more important.

The Board of Railway Commissioners for Canada, as provided for by the amended Railway Act of 1903, was organized on Feb. 1, 1904. In the beginning, its membership consisted of a Chief Commissioner, a Deputy Chief and one Commissioner. In 1908 the membership was increased by the inclusion of an Assistant Chief Commissioner and two other Commissioners. According to the Act, the Board may be divided into two sections of three members but, since any two constitute a quorum, two Commissioners usually hear all but the more important cases, and, agreeing, give the decision of the Board.

The powers of the Commission, in brief, are in matters relating to the location, construction and operation of railways. The most important of these powers has to do with rate regulation. Passenger rates are divided into standard and special, freight rates into standard, special and competitive. Standard rates are maximum rates and the only ones which must be approved by the Board before they are applied. Special and competitive rates, being less than maximum rates, may be applied by railways without the Board's approval, provided that a change of rates has been advertised. But important rate adjustments usually come to the notice of the Commission, for the changed rate alters the extent of the territory in which a shipper can compete and on this account he is apt to appeal the case to the Commission. It is a knotty problem to mark the boundaries of competitive areas -- to decide whether Nova Scotian manufacturers should be given rates which would allow them to compete west of Montreal, or again, whether high construction and operation costs in British Columbia should enforce a rate which prevents her goods from moving far into the prairies. By an amendment to the Railway Act, the regulation of telephone, telegraph and express rates was given to the Commission, but with narrower powers than were given to it in dealing with railways.

*Revised by A. D. Cartwright, Secretary, Board of Railway Commissioners for Canada.

The procedure of the Board is informal, as suits the nature of its work, for experience has shown that hearings in strict legal form give the parties to the argument uncompromising attitudes. If possible, matters are settled by recommendations to the railway company or the shipper; thus, during 1933, 96·8 p.c. of the applications to the Board were settled without formal hearing. The Railway Committee had kept its station at Ottawa, giving only formal hearings, so that the grievances of those who could not afford to appear in person or pay counsel went unredressed. The itineraries of the Railway Commission are arranged so that evidence may be taken at the least expense to those giving it.

The Chief or Assistant Chief Commissioner, depending upon which one is presiding, gives final judgment on points of law when, in the opinion of the Commissioners, the question is one of law. On questions of fact the findings of the Board are final and are not qualified by previous judgments of any other court. Questions of law and jurisdiction are differentiated. In the first case, the Board may, if it wishes, allow an appeal to the Supreme Court; in the second, the applicant needs no permission to present his appeal.

The Railway Committee of the Privy Council, being a Committee of the Cabinet, was responsible to Parliament. When the powers of the Committee were made over to the Railway Commission the responsibility was retained, but necessarily by a different means. There is now provision for an appeal from any decision to the Governor General in Council, who may also of his own motion rescind or vary the action of the Board, but the power to rescind or vary usually consists in referring to the Board for reconsideration. From its inception until Dec. 31, 1933, the Board gave formal hearing to 10,092 cases. Its decision was appealed in 110 cases, 67 of these being to the Supreme Court of Canada and 43 to the Governor General in Council. Of the appeals 12 of those carried to the Supreme Court were allowed and 3 of those to the Governor General in Council.

PART II.—STEAM RAILWAYS.*

Section 1.—Historical Sketch.

Construction was begun on the first Canadian railway in 1835. This was a line only 16 miles long between St. Johns and Laprairie, Quebec, intended to expedite the journey between Montreal and New York. It was opened for traffic in 1836, being operated at first with horses, for which steam locomotives were substituted a year later. About the same time, a line 6 miles long was built in Nova Scotia from Stellarton to a loading point on Pictou harbour to haul coal from the mines to vessels. On this line also the motive power was at first provided by horses, but in the spring of 1839 the "Samson", a locomotive built in England, brought over in a sailing vessel and still preserved in Halifax, was put in operation. A railway from Montreal to Lachine was opened in 1847 and another line to St. Hyacinthe in 1848. In 1850, however, there were only 66 miles of railway in Canada.

Commencement of the Railway Era—The Grand Trunk.—The railway era in Canada may be said to have begun in 1851, when an Act was passed providing for the construction of a main line of railway between the two Canadas. The

*Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This branch publishes an annual report on Steam Railways, as well as numerous other reports, for a full list of which the reader is referred to Chapter XXIX of this volume.

result was the completion of the Grand Trunk Railway between Montreal and Toronto in 1856, its extension westward to Sarnia in 1859, and eastward to Rivière du Loup in 1860. The Atlantic and St. Lawrence Railway, from Portland, Maine, to the Canadian boundary, was leased for 999 years and in 1859, on the completion of the Victoria bridge across the St. Lawrence at Montreal, the Grand Trunk had a through route 800 miles long from Portland to Sarnia. A line from Detroit to Port Huron was leased in 1859, the Champlain roads in 1863, the Buffalo and Lake Huron in 1867, while the Chicago and Grand Trunk was completed from Port Huron to Chicago in 1880. In 1881 the Georgian Bay and Lake Erie system (171 miles) was incorporated, and in the following year the Great Western (904 miles) and the Midland systems (473 miles) were also incorporated into the Grand Trunk. In 1888 the Northern Railway, which had been opened from Toronto to Barrie in 1853, and the Hamilton and Northwestern Railway were taken over by the Grand Trunk. In 1891 the completion of the St. Clair Tunnel gave direct communication with the railways of the United States. In the 1870's the gauge had been changed from the original 5′ 6″ to the standard gauge of 4′ 8½″.

Construction of the Intercolonial.—An intercolonial railway between the Maritime Provinces and Canada had been proposed as early as the 1830's. In 1844 the Imperial Government made a survey for a military road, and in 1851 agreed to recommend to Parliament either a guarantee of interest or an advance of the sum required to build a railroad. Differences of opinion as to the route resulted in the project being dropped, but in 1853 Nova Scotia undertook to construct by 1862 a trunk line from Halifax to the New Brunswick frontier, with branch lines to Pictou and Victoria Beach. In both Nova Scotia and New Brunswick, however, the scheme of an intercolonial railway broke down for lack of funds, and in 1867 there were only 374 miles of railway in the Maritimes—229 miles in New Brunswick, including lines from Saint John to Shediac and from St. Andrews to Richmond; 145 miles in Nova Scotia, including lines from Halifax to Truro and Windsor, and from Truro to Pictou. These, under the B.N.A. Act, passed to the Dominion Government. The latter undertook the completion of the railway, and in 1876 the line was opened. In 1879 the Rivière du Loup branch of the Grand Trunk was acquired, and in 1898 the Drummond Counties Railway from Chaudière Junction to Ste. Rosalie Junction was leased and running rights obtained from the latter point over the Grand Trunk tracks into Montreal, the Intercolonial thus becoming a competitor for the business of the commercial metropolis of Canada.

The First Transcontinental Railway—The C.P.R.—As early as 1849 a pamphlet published by Major Carmichael-Smyth advocated the construction of a Canadian Pacific railway nearly along the present route. In 1851 a Parliamentary Committee reported against undertaking the enterprise at that time. In 1871 the terms under which British Columbia entered Confederation bound the Dominion to commence the Pacific railway within two years and complete it within ten years. The building of the railway as a public work actually commenced in 1874, but was not very rapidly pushed forward. In 1880 the Government entered into a contract with the Canadian Pacific Railway syndicate, granting to the syndicate all portions of the line completed or under construction, a cash subsidy of $25,000,000, a land grant of 25,000,000 acres, free admission of materials for construction, and protection for 20 years against competing lines. The company on its side agreed to complete the railway to a fixed standard by May 1, 1891, and thereafter to maintain it efficiently. As a matter of fact the last spike on the main line was driven on Nov. 7, 1885. Like the Grand Trunk, the Canadian Pacific Railway began to acquire

branch lines as feeders, among them being the North Shore, Quebec, Montreal, Ottawa and Occidental in 1881; the Winnipeg to Manitou line in 1882; the Ontario and Quebec, the Credit Valley and the Toronto, Grey and Bruce in 1883; the St. Lawrence and Ottawa, and the Manitoba Southwestern in 1884; the North Shore, Nova Scotia in 1885; the Atlantic and Northwest in 1886; the West Ontario Pacific in 1887; the Sudbury and Sault Ste. Marie in 1888; the New Brunswick Railway and the Columbia and Kootenay in 1890; and the Montreal and Ottawa, and Montreal and Lake Maskinongé in 1892.

The Second Transcontinental—The Grand Trunk Pacific.—About the end of the century the Grand Trunk, which already had a line as far west as Chicago, submitted to the Canadian Government a proposal whereby it might participate in the settlement and development of the West. Lines were to be leased from Chicago *via* Minneapolis to Winnipeg, and thence a new line, subsidized by the Government, would be built to the Pacific Coast. The Government raised objections to so much of the line lying in the United States and a second proposal was made for a connecting line with larger subsidies from North Bay to Winnipeg. The Government submitted, in 1903, a counter proposal that the line, instead of terminating at North Bay, should be continued east to Moncton, New Brunswick, the eastern section from Moncton to Winnipeg to be constructed by the Government and leased to the Grand Trunk Pacific for a 50-year period, the railway paying no rent for the first seven years and 3 p.c. on the cost of the railway for the remaining 43 years. The western half of the railway from Winnipeg to Prince Rupert was to be built by the Grand Trunk Pacific, the Government guaranteeing interest on bonds to 75 p.c. of the cost of construction, not exceeding $13,000 per mile on the prairie section and $30,000 per mile on the mountain section. The Grand Trunk reluctantly accepted this proposition and construction of the National Transcontinental and Grand Trunk Pacific commenced.

The Third Transcontinental—The Canadian Northern Railway.—The third transcontinental railway, the Canadian Northern, was begun in 1896 with the completion by Mackenzie and Mann of the 125-mile line of the Lake Manitoba Railway and Canal Co., chartered in 1889. The charters of the Winnipeg and Hudson Bay, the Manitoba and Southeastern, the Ontario and Rainy River, and the Port Arthur, Duluth and Western were next acquired. Assisted by the Manitoba Government, which desired to establish competition with the Canadian Pacific Railway, the Canadian Northern then secured the Manitoba lines of the Northern Pacific and in 1902 completed its line from Winnipeg to Port Arthur. During the following decade, the agricultural west was filling up very rapidly and, with the public of Canada under the influence of this boom, the Canadian Northern Railway was able to secure guarantees of bonds from the Dominion and Provincial Governments to enable it to extend its lines both westward to Vancouver and eastward to Montreal and so complete the great scheme of a transcontinental road.

Effect of the War on the Railways—The Drayton-Acworth Report.—With two new transcontinental main lines, besides branches, under construction Canadian railway mileage was doubled between 1900 and 1915, increasing from 17,657 miles in the former year to 34,882 miles in the latter. The builders of the new lines, as well as the Canadian Government and people, had expected that immigration of capital and labour from Europe would rapidly settle the areas tributary to the new railroads and give them abundant and lucrative traffic, as had been the case with the C.P.R. Instead, the War came, and European labour

and capital were conscripted for the struggle; immigration fell off, while cost of operation increased, owing to the scarcity of labour and material in Canada. The interest on the bonds had to be met, and in 1915 the Government felt it necessary to give assistance to the railways. In 1916, after having again made loans to the Grand Trunk Pacific Railway and the Canadian Northern Railway Co., a Royal Commission was appointed by Order in Council of July 13, 1916, to investigate : (1) the general problem of transportation, (2) the status of each of the three transcontinental systems, (3) the reorganization of any of the said systems, or their acquisition by the State, and (4) other matters considered by the Commission to be relevant to the general scope of the inquiry. The majority report of the Commission, signed by Sir Henry Drayton and Mr. Acworth, has formed the basis of the subsequent railway policy of Canada. Their recommendation was that the public should take control of the Canadian Northern, of the Grand Trunk Pacific and the Grand Trunk proper, and that they should be administered on purely business principles by a board of trustees, such compensation as seemed proper to be decided by arbitration and given to the shareholders of the Canadian Northern and the Grand Trunk.

The process of the acquisition of these railways and the financial results of their operation down to the end of 1933 are described in Section 3, pp. 714-725.

The Royal Commission of 1931.—During 1930 and 1931 both freight and passenger traffic declined until new low records were being established each succeeding month. Freight and passenger revenues consequently decreased at alarming rates and with increasing capital expenditures and fixed charges, the financial condition of Canadian railways demanded readjustment. The dividend rate of the Canadian Pacific Railway was reduced from 10 p.c. to 5 p.c. for the second and fourth quarters of 1931 and early in 1931 it was evident that the Canadian National system would not earn the interest due on the public holdings of its bonds and debentures, not to speak of over $32,000,000 interest on Government loans. To study the situation and, if possible, to remedy it, the Government appointed a Royal Commission under the chairmanship of the Rt. Hon. L. P. (now Sir Lyman) Duff, Judge of the Supreme Court of Canada, which held hearings throughout the country and on Sept. 13, 1932, submitted its report, summarized at pp. 648-650 of the 1933 Year Book. During the following session of the Dominion Parliament legislation known as The Canadian National-Canadian Pacific Act, (c. 33) 1933, was passed implementing the report of the Commission.

Under this Act the former Board of Directors of the Canadian National Railways is replaced by a board of three trustees, the chairmanship of which is a full-time position. The members are appointed for terms of five years and shall not be removed from office unless for assigned cause and on Address of the Senate and House of Commons. Decisions of the majority, which must include the chairman, will prevail. The trustees must submit each year estimates of requirements to Parliament through the Finance Minister and income deficits shall not be funded. The trustees shall also present annual reports to Parliament through the Minister of Railways and Canals. Continuous audit shall be made by independent auditors appointed annually by Parliament.

Under Part II of the Act the Canadian National and Canadian Pacific Railways are required to co-operate as recommended by the report of the Commission and, in addition, the railways are to divide the employment of such co-operative

activities between the employees of the two railways, the division to be made by negotiations with the employees.

The co-operative measures may include:—

(a) New companies controlled by stock ownership, equitably apportioned between the companies;

(b) Leases, entrusting agreements, or licences, or agreements for pooling and division of earnings arising from the joint operation of any part or parts of freight or passenger traffic, or express, telegraph, or other operating activities or services;

(c) Joint trackage, running rights, joint ownership, or joint operating agreements, depending upon the nature of the property or services included in any co-operative plan;

(d) Joint or individual highway services, or highway and railway services combined, in any form.

In the formation of any new company, the employees in any services taken over by the new company shall be given preference.

Under Part III provision is made for the erection of a tribunal with jurisdiction as recommended by the Commission, except that clause (e) "abandonment of lines, services and facilities" is struck out. The powers of the tribunal may be invoked by either company and decisions of the presiding officer and one member shall be final and binding on both railways, even if one railway fails to appoint a representative. The orders of the tribunal shall be binding and enforced in the same manner as orders of the Board of Railway Commissioners and shall not be subject to appeal except as to jurisdiction and only to the Supreme Court of Canada. Where an order of the tribunal conflicts with an order of the Board of Railway Commissioners the former shall prevail. Where a dispute is of substantial concern to the public, or affects any province, the presiding officer shall give due notice and the interested parties may be heard at the sitting.

The Act does not authorize the amalgamation or unified management of the two railways.

Section 2.—Statistics of Steam Railways.

The steam railways of the world may be said to have commenced their operation with the opening of the Stockton and Darlington railway in England on Sept. 26, 1825. Between then and 1933 the mileage of the steam railways of the world had increased to a total of approximately 783,000 miles. Nearly a third of this total was in the United States, which had a total of 247,595 miles in 1932. Soviet Russia came second with 55,926 miles, British India third with 42,961 miles and Canada fourth with 42,338 miles. France had 26,113 miles, Germany 36,405 miles, Great Britain 20,251 miles, Australia 27,798 miles, Argentina 25,451 miles, Brazil 19,853 miles and Mexico 14,506 miles. On a per capita basis Australia had the greatest mileage with only 238 inhabitants per mile of line, and Canada was second with 254 persons per mile of line, (exclusive of 341 miles of line, chiefly main lines of Canadian railways, crossing over United States territory).

The mileage of steam railways in operation in Canada is given by years for each year from 1850 to 1933 in Table **1**, showing the first great period of construction in the 1850's, when the mileage grew from 66 to 2,065, the lull in the 1860's, the second great period of construction in the 1870's and 1880's, the lull in the 1890's, the third great period of construction between 1900 and 1917 and the subsequent falling-off in the rate of increase.

[1]Revised since the publication of the 1933 Year Book.

The operated mileage in the different provinces is given for recent years in Table 2. Construction was most active in Saskatchewan and Alberta during the period covered, as will be seen from the increased mileage recorded in these provinces.

[1]Revised since the publication of the 1933 Year Book.

Capital Liability.—The capital liability of the steam railways of Canada is shown in Table 3 for the years 1901 to 1933. The great increase after 1922 is due to the inclusion of all Government loans to railways and investment in road and equipment of Government railways as part of the capital liability of the railways. Statistics of individual lines are given in Tables 4 and 4A.

3.—Capital Liability of Steam Railways, as at June 30, 1901-19, and Dec. 31, 1919-33.

NOTE.—Corresponding figures for each year from 1876 to 1900 inclusive were given on p. 649 of the 1927-28 Year Book.

[1]Canadian lines only. [2]Including capital of leased lines. [3]Constructed and operated by Ontario Government Railway Commission. [4]Included with Canadian Pacific Ry. [5]Includes $201,989,152 Canadian railway capital owned by Canadian railways.

Capital Investment.—The capital investment in road and equipment of Canadian steam railways is shown in Table **5** for the calendar years 1928–33. The table gives the investment in new lines and in additions and betterments during the year, together with the cumulative total of such investments as at the end of each year. During 1933, $208,671 was invested in new lines and $107,684 in additions and betterments, while up to Dec. 31, 1933, a total of $3,365,464,255 had been invested in road and equipment of Canadian steam railways. When comparison is made with the figures of Table **3**, it is seen that the capital liability of the steam railways was considerably greater than the actual investment in physical property by the railways at the same date. This discrepancy is largely accounted for by the fact that the total of capital liabilities as shown in Table **3** includes loans and advances from the Government to cover deficits of the Canadian National Railways and unpaid accrued interest on such loans which, up to Dec. 31, 1933, amounted to $424,338,109 as shown in Table **21**. A further factor in the discrepancy is that some of the outstanding railway stocks represent little actual investment in physical property.

5.—Capital Invested in Road and Equipment of Canadian Steam Railways, calendar years 1928-33.

[1]Includes a credit of $13,477,505 on account of Canadian National property transferred to Harbour Commissions of Halifax and Saint John.

[2]Includes difference between purchase price of Atlantic, Quebec and Western; Kent Northern; Quebec, Montreal and Southern; and Quebec Oriental Railways and investment reported in 1928—a credit of $7,198,024; difference between valuation of Northern Alberta Railways and investment of Alberta and Great Waterways; Central Canada; Edmonton, Dunvegan and British Columbia; and Pembina Valley Railways as at June 30, 1929—a credit of $5,639,429; a credit of $1,869,859 for the Hereford Railway which ceased operation; and additions and betterments to separately operated properties and other undistributed items amounting to a debit of $5,828,816.

[3]Credit of $18,180,692 for Canadian Northern and Grand Trunk Pacific rails lifted during the War for use in France and other lines dismantled after consolidation of the Canadian National system.

[4]Includes a credit of $6,928,410 due to balance sheet transfers, and a credit of $1,359,261 for additions and betterments to separately operated properties of Canadian National Railways and miscellaneous credits amounting to $309,876.

[5]Includes $2,900,000 due to balance sheet transfers, a credit of $179,805 for additions and betterments to separately operated properties of the Canadian National Railways and a credit of $1,742,894 due to adjustments in investment in leased lines of the Canadian Pacific Railway.

[6]Includes a credit of $1,792,204 due to balance sheet transfers of the Canadian National Railways; a credit of $139,806 due to balance sheet transfers and a credit of $40,295 for additions and betterments to its separately operated properties, also a debit of $14,883,870 covering investments of its leased lines not shown in previous years; a credit of $84,376,267 due to adjustments of expenditures of the Canadian Pacific Railway to Dec. 31, 1932, largely investments in hotels and office buildings previously carried as railway investment, and a debit of $2,000 due to correction of expenditures for its leased and acquired lines; a credit of $32,445,146 due to adjustments in investments of the Pacific Great Eastern Railway and a debit of $413,210 for the Winnipeg River Railway not previously shown.

Summary of Traffic Statistics.—A summary of freight and passenger traffic statistics and of the ratio of operating expenses to gross earnings, continuing a series which has been compiled since 1875, will be found for recent years in Table **6**. This table, however, has the defect that its figures of passengers and freight carried are not comparable throughout but have been reduced as a result of the consolidation of railways. Better tests of the real volume of passenger and freight traffic are supplied in Table **9** of this chapter under the headings "Passengers carried one mile" and "Freight carried one mile". These records, commencing in 1915, show that the maximum volume of passenger traffic was reached in the calendar year 1919 and the maximum volume of freight traffic in 1928. Both freight and passenger traffic, especially the latter, have in recent years been affected by the increase in the use of motor vehicles. This traffic decrease has been much aggravated since 1929 by the general decline in commercial activity.

The statistics of gross earnings and operating expenses illustrate the difficulties confronting our railways in recent years. Before the War it was generally held that, on account of the enormous initial investment required in roadbed and equipment, a railway's operating expenses should not exceed about two-thirds or 70 p.c. of its

gross earnings, the remainder being required to meet interest on capital invested, whether represented by stocks or bonds, as well as to provide for necessary improvements. The ratio of operating expenses to gross earnings is called the operating ratio, and in 1913 the Canadian operating ratio was 70·90 p.c. The new conditions of the war period, especially the higher cost of labour and of fuel, increased the operating ratio, in spite of advances in freight and passenger rates, until in 1920 it reached 97·18 p.c. By 1928 the operating ratio had declined to 78·53 p.c. but it rose to 89·53 in 1931 and decreased to 87·48 in 1932 and to 86·26 p.c. in 1933. Although operating revenues for 1933 were lower than in 1932 on account of the decreases in both freight and passenger traffic, the net operating revenues increased by $423,128.

In Table 7 will be found an analysis of the distribution of the operating expenses of steam railways for the latest four years. The earnings and operating expenses per mile of line and per train-mile are analysed in Table 8.

6.—Summary of Steam Railway Statistics of Freight and Passenger Traffic, and Ratio of Expenses to Earnings, years ended June 30, 1911-19, and calendar years 1919-33.

NOTE.—These statistics were published for the years 1875–1910 on p. 434 of the 1916–17 Year Book, and for 1901–25 on p. 591 of the 1926 Year Book.

A summary analysis of passenger and freight traffic statistics for recent years is given in Table 9, showing among other things a decline in average receipts per passenger per mile from 3·04 cents in 1921 to 2·29 cents in 1933, and a decline in the average number of passengers per train from 70 in 1919 and 64 in 1920 to 39 in 1933. Similarly, freight traffic statistics show a reduction in freight receipts per ton per mile from 1·200 cents in 1921 to 0·955 cents in 1933. The average haul for freight has been revised to show the average for all railways instead of for each railway, thereby eliminating the effects of consolidations of railways and of interchanging freight between Canadian railways. The passenger traffic has shown the effects of the competition of motor vehicles, both public and private, which in 1915, numbered only 89,944, while in 1933 they numbered 1,082,957. The average revenue per passenger increased in 1918 and 1919 with increases in rates, but the increases between 1924 and 1930 have been largely due to decreases in the short haul traffic. The increases in freight train loading and train revenues have been due to the use of larger and more powerful locomotives.

Railway Wages and Salaries.—The data in Table **10** show the number of employees and the salaries and wages, as reported by the railways, for 1912–33 inclusive and columns of adjusted data have been added. These adjusted data, as explained in footnote 2, are for comparative purposes only and were necessitated by several revisions in the method of reporting employees and wages.

The Canadian National Railways brought into their railway accounts in 1923 the express and hotel employees and, in 1928, the commercial telegraph employees. The Canadian Pacific excluded the wages chargeable to capital account and also deducted a *pro rata* number of employees prior to 1926, and in 1915 and 1916 omitted to include outside operations employees. Because these railways were not able to correct the data for the early years, the Bureau compiled these adjusted data on

a basis as nearly comparable as possible. Employees and wages for 1926 and subsequent years are on the same basis and include the total employees and salaries and wages charged to both capital accounts and operating expenses.

The number of railway employees and the amount of their remuneration are naturally affected by the volume of traffic, which tends to rise in periods of active business conditions and fall in times of depression. The volume of traffic is also very directly affected by the size of the grain crops in the West. Thus it may be observed in Table **10** that the very favourable industrial and agricultural conditions of 1928 resulted in a considerable increase in the number of employees.

The monthly average number of employees dropped from 132,678 in 1932 to 121,923 in 1933. This was the smallest staff working on Canadian railways since 1908, when the mileage was only 54 p.c. of the 1933 mileage. These are monthly averages, so that the average annual wages and time worked are not affected by seasonal lay-offs and fluctuations. Thus four men working three months would have the same effect on the average as one employee working twelve months.

[1] The ratio percentages are for pay roll chargeable to operating expenses only for 1926 and subsequent years.

[2] Data for early years could not be corrected, so the other data were adjusted to be as nearly comparable as possible, but these data should be used only for purposes of comparison. (See text above.)

[3] Revised to include commercial telegraph employees of Canadian National Railways.

Rolling Stock.—Statistics of the rolling stock of the steam railways of Canada are given for the last seven years in Table **11.** The figures may be supplemented by the statement that between 1920 and 1933 the average capacity of box cars increased from 34·779 tons to 39·398 tons, of flat cars from 33·459 to 39·536 tons, and of all freight cars from 35·141 tons to 40·016 tons. The average tractive power of the locomotive in use in 1920 was 31,112 lb. and in 1933, 37,242 lb.

[1] Includes pullman cars.

Commodities Hauled.—In Table **12**, the duplications from two or more railways handling the same freight have been eliminated. The peak year was 1928 when agricultural products were particularly heavy. The 1933 statistics show a decrease of 3,443,457 tons, or 6 p.c. from the 1932 total and of 52 p.c. from 1928.

12.—Commodities Hauled as Freight on Steam Railways during the calendar years 1929-33.

NOTE.—In this table duplications are eliminated, *i.e.*, the same freight handled by two or more railways is counted only once. In this respect these figures differ from those in the corresponding table in the 1926 and previous Year Books, and also from those of Table **6** in this chapter.

Government Aid to Private Railways.—In order that the private railways of Canada might be constructed in advance of settlement, as colonization roads or through thinly settled districts where little traffic was available, it was necessary for Dominion, Provincial and even municipal governments to extend some form of assistance. In our earlier history, when our governments had plenty of Crown land and little cash, the subsidies granted to railways frequently took the form of land grants, which had the advantage of giving the railway a direct interest in opening up the country, though they sometimes led to the railways holding large tracts of land idle for speculative purposes when intermixed Crown lands had been homesteaded, thus retarding the settlement of agricultural land. Table **13** shows the areas of the land granted as subsidies and for right of way, station grounds and townsite purposes to steam railway companies by the Dominion and Provincial Governments, with the names of the companies in the case of the Dominion Government. The total area granted up to Dec. 31, 1933, amounted to 47,405,719·53 acres.

As the country grew wealthier, the objections to the land-grant method became more apparent, and aid was more frequently given in the form of a cash subsidy per mile of line, a loan, or a subscription to the shares of the railway. From 1851 up to Dec. 31, 1933, as shown analytically in Table **14**, the total value of such aid granted to steam railways in Canada, exclusive of the capital of Government railways, amounted to $224,320,757. Of this sum, $177,834,528 was granted by the Dominion Government, $33,385,615 by the Provincial Governments, and $13,100,614 by municipalities. Table **15** records the details of the most recent type of assistance given to private railways, *viz.*, by the guaranteeing of their bonds or of the interest thereupon. These guarantees enabled the railways receiving them to borrow money at rates of interest considerably lower than would otherwise have had to be paid. The total amount outstanding on Dec. 31, 1933, was $900,046,923.

New Brunswick	917,000
Ontario	7,859,998
Manitoba	3,000,000
Saskatchewan	17,904,062
Alberta	18,394,428
British Columbia	45,186,001
Total Guaranteed by Provincial Governments	**93,261,489**
Dominion Government	806,785,434[1]
Grand Total	**900,046,923**

[1] Does not include $216,207,142 perpetual debenture stock and guaranteed stock of the Grand Trunk Railway, on which interest and dividends are guaranteed by the Dominion Government, nor Government-guaranteed bonds held by the Government itself but it does include $60,000,000 advanced to the Canadian Pacific Railway by the banks and guaranteed by the Dominion Government. This latter sum is not included in the guarantees shown in Tables **25** and **26**, Chapter XXI of this volume, nor is a further sum of $750,000, paid off between Dec. 31, 1933 and Mar. 31, 1934.

Railway Accidents.—The number of passengers, employees and others killed and injured in steam railway accidents is given in summary form from 1920 to 1933 in Table **16,** and in detailed analysis for 1931 to 1933 in Table **17.**

During 1933, (Table **17**) 8 passengers were killed in train accidents and 306 injured. Fewer passengers were killed in 1932 and 1931, but this is the smallest number injured since 1919. A new low record for the past 25 years was established in the number of employees killed in train accidents with a total of 41. In 1932, 57 were killed; in 1931, 42; in 1930, 81; and a maximum of 298 in 1913. There was an increase in employees injured from 957 in 1932 to 985; both these years, however, were well below the previous 20 years. Postal clerks, etc., trespassers and non-trespassers brought the total up to 260 persons killed and 1,851 injured in train accidents. Highway crossing accidents accounted for 78 persons killed and 247 injured. Of the fatalities, 11 were pedestrians, 61 were motorists and 6 were occupants of other vehicles. Fifteen of the total were killed at protected crossings and 63 at unprotected crossings and 46 persons were injured at protected highway crossings and 201 at unprotected crossings. Persons killed and injured in railway accidents other than train accidents numbered 20 and 3,522 respectively, the majority of the injured being trackmen and shopmen.

16.—Numbers of Passengers, Employees and Others Killed and Injured on Steam Railways, calendar years 1920-33.

NOTE.—For the years ended June 30, 1888 to 1919, see Canada Year Book, 1910, p. 378, and 1922-23, p. 635.

Section 3.—Origin and Growth of Government-Owned Railways.

Canadian Government Railways.—The Intercolonial Railway, built as a condition of Confederation and completed in 1876, and the Prince Edward Island Railway, opened in April, 1875, have since their construction been owned and operated by the Dominion Government. In 1903 the Dominion Government undertook the construction of the National Transcontinental Railway from Moncton, N.B., to Winnipeg, to be leased to the Grand Trunk Pacific Railway Co. for a period of 50 years. However, as a result of the conditions arising from the Great War, the company was unable to take over the operation of the road when completed in 1915. The Government itself undertook its operation and was also obliged to lease the Lake Superior branch of the Grand Trunk Pacific Railway, which was isolated from the main line. A number of eastern branch lines have been acquired in recent years, including: the New Brunswick and Prince Edward Island Railway which forms the mainland connection of the Prince Edward Island car ferry, the International Railway, the Moncton and Buctouche Railway, the Salisbury and Albert Railway, the St. Martin's Railway, the Elgin and Havelock Railway, the

York and Carleton Railway, the Quebec and Saguenay Railway, the Caraquet and Gulf Shore Railway, the Lotbinière and Mégantic Railway and the Cape Breton Railway. The Saint John and Quebec, and Inverness Railways, which had been operated under lease, were purchased in 1929, together with the Kent Northern, the Atlantic, Quebec and Western, the Quebec Oriental and the Quebec, Montreal and Southern. The Hudson Bay Railway, which had 332·5 miles of steel rail at the end of 1920, was declared to be comprised in the Canadian Government Railways, and until 1926 was operated to a limited extent by the board of directors of the Canadian National Railways. In that year, as a result of the decision to complete the road, it was returned to the Department of Railways and Canals until completed. The eastern terminus was transferred from Nelson to Churchill, and the line rehabilitated and extended through to Churchill. Construction of wharves and a grain elevator was completed in time to allow two cargoes of wheat to be shipped to Europe in September, 1931. To Mar. 31, 1934, the total cost of this railway was $32,090,577 and of terminal work at Churchill $12,900,635, exclusive of the expenditures of $6,240,201 on the terminal at Nelson, some of which was salvaged.*

Table **18**, from the Annual Report of the Department of Railways and Canals, shows Dominion Government investments in the Canadian Government Railways and other lines to Mar. 31, 1934.

*These figures of total cost include deficits from operations during construction.

The Consolidation and Organization of the Canadian National System.*—In pursuance of an Act of 1917 (7-8 Geo. V, c. 24), the Government acquired the capital stock of the Canadian Northern Railways with a mileage of 9,566·5. The insolvency of the Grand Trunk Pacific led to the appointment of the Minister of Railways as receiver on Mar. 9, 1919, and in October, 1920, the road was transferred to the Canadian National Railways. The Grand Trunk Railway was acquired under c. 13 of the Statutes of the second session of 1919, providing for arbitration of the considerations to be given to its shareholders. This arbitration finally disposed of, steps were taken to consolidate the various railways under government operation and control. In October, 1922, the Grand Trunk Board and the Canadian Northern Board gave place to a single Canadian National Board, to which the former Canadian Government Railways were turned over for management and operation. The unification of the Grand Trunk and Canadian National Railways was provided for by Order in Council of Jan. 30, 1923, which also brought into effect the Act to incorporate the Canadian National Railway Co. and respecting Canadian National Railways (c. 13, 1919). This was followed, on Feb. 5, 1923, by an Order in Council establishing the head office of the Canadian National Railways at Montreal, Que.

Operation of the Canadian National Railways.—The Canadian National system's steam mileage at Dec. 31, 1933, including lines in the United States but exclusive of the Northern Alberta Railways and Toronto Terminals Railway (which

*For further details of the acquisition of the Canadian Northern, Grand Trunk Pacific and Grand Trunk Railways by the Dominion Government, see pp. 602-603 of the 1926 Year Book.

are controlled jointly by the Canadian National and the Canadian Pacific Railways), was 23,750·03. Including the Thousand Islands Railway, 4·51, and the Muskegon Railway and Navigation Co., 5·25, controlled but separately operated, the total steam mileage was 23,759·79. Including 121·11 miles of electric lines, the grand total was 23,880·90.

The Maritime Freight Rates Act (17 Geo. V, c. 44), effective July 1, 1927, ordered that the accounts of the Canadian National lines east of Lévis and Diamond Junction, Quebec, be kept separate from those of the remainder of the Canadian National system. These lines were designated the "Eastern Lines" of the Canadian National Railways. The Act ordered that specified freight rates on the Eastern Lines be reduced by 20 p.c. Other railways were allowed to make similar reductions in their freight rates in that territory and to bill on the Board of Railway Commissioners of Canada for the difference in freight receipts due to such reductions. The Government contributions to the deficits of the Eastern Lines are shown in Table **22.** The differences between the reduced rates and the normal rates are treated as revenues by the Canadian National Railways and paid by the Dominion Government. The total paid to privately-owned railways under the Act was $421,655, $828,893, $811,149, $861,195, $669,673, $508,233 and $611,130, respectively, for 1927-33.

For operation the Canadian National Railways system is divided into five divisions: the Atlantic division, including all lines east of Rivière du Loup and Monk, Quebec, 3,339 miles; the Central division, west from these stations to Port Arthur and Armstrong and south to Portland, Maine, 7,529 miles; the Western division, all lines west of Port Arthur and Armstrong including the line to Duluth, 11,419 miles; the Grand Trunk Western, all lines in Michigan, Indiana and Illinois, 1,008 miles; and the Central Vermont from Iberville, Quebec, to New London, Connecticut, 455 miles.

The Quebec Bridge across the St. Lawrence above Quebec city, with a main span of 1,800 ft., carrying a single track railway and accommodation for motor and pedestrian traffic, forms a connecting link in the Canadian National Railways system and is operated as a part of it.

Table **19** shows some of the more important train traffic statistics of Canadian National Railways operation for the years 1932 and 1933.

19.—Canadian National Railways (Canadian and U.S. Lines) Train Traffic Statistics, for the calendar years 1932 and 1933.[2]

Average number of passengers per car mile	8·14	8·42
Revenue from passengers per passenger car mile $	0·20475	0·19024
Total passenger train earnings per train mile $	1·59	1·50
Total passenger revenue per mile of road $	1,331·40	1,174·19
Freight Traffic—		
Tons of revenue freight carried	34,376,605	31,368,058
Tons of revenue freight carried one mile	12,817,508,963	11,550,194,043
Tons of non-revenue freight carried one mile	1,179,198,114	1,283,211,921
Total tons (all classes) freight carried one mile	13,996,707,077	12,833,405,964
Tons of revenue freight carried one mile per mile of road	537,138	484,397
Total tons (all classes) freight carried one mile per mile of road	586,742	538,442
Average number of tons revenue freight per train mile	522·45	516·32
Average number of tons (all classes) freight per train mile	570·70	573·92
Average number of tons (all classes) freight per loaded car mile	24·97	24·34
Average haul revenue freight—miles	372·86	368·22
Freight revenue per loaded car mile $	0·21614	0·21388
Freight revenue per train mile $	4·94	5·04
Freight revenue per mile of road $	5,077·90	4,730·62
Freight revenue per ton $	3·51155	3·58069
Freight revenue per ton mile $	0·00942	0·00972

[1] Excludes electric lines.

[2] For detailed statistics of the operation and finances of the Canadian National Railways during 1933 see the annual report of the Department of Railways and Canals for the fiscal year ended Mar. 31, 1934, and Steam Railway Statistics, 1933, published by the Dominion Bureau of Statistics, also the annual report of the Canadian National Railways.

[3] Work service excluded.

Operating Finances of the Canadian National Railways.—In Table **20** "Canadian Lines" include those of the Canadian Northern system, the Grand Trunk Railway of Canada, the Grand Trunk Pacific and the Canadian Government Railways. The "United States Lines" include those lines known as the New England line, the Grand Trunk Western, the Duluth, Winnipeg and Pacific and the Central Vermont from Feb. 1, 1930. The Hudson Bay Railway was returned to the Government while under construction, and appropriations, etc., for this were not included with the 1926 and later data. The Maritime Freight Rates Act necessitated the segregation of the Eastern Lines, which were kept separate from July 1, 1927, but as a result of the "Duff Report" are again included with those of the Canadian Lines.

Gross revenues, operating expenses and net revenues shown in Table **20** include only those from steam railway and commercial telegraph operations, but the deficits are for the entire system, including the operating results of the Niagara, St. Catharines and Toronto Railway (electric) and other railways operated separately, hotels, commercial telegraphs, coastal steamships and all other outside operations.

Up to 1928 there was a marked improvement over the results of the first year after consolidation (1923), when the deficit, including profit and loss adjustments, was $54,634,322, but the light traffic in 1932 so reduced gross revenues that, with increased interest charges, the deficit increased to $101,335,074. It was reduced slightly in 1933 to $97,651,957.

The figures of Table **20** are taken from the accounts of the railways as at Dec. 31, 1933. Adjustments have been made which result in minor changes in the items of interest and deficits for former years.

[1] Includes Central Vermont Railway from Feb. 1, 1930. [2] Revenues and expenses 1923-27, adjusted to include commercial telegraph lines to be comparable with 1928-33. [3] The deficit shown is as per the accounts and includes Government interest accounting adjustments of $12,199,307 and appropriation for insurance fund of $9,634,306, the actual cash deficit for the period being $282,004,297, as shown in Table 22. [4] Interest at 4 p.c. on $34,927,098 G.T.P. debenture stock reduced under agreement to 2 p.c.

The Debt and Interest Charges of the Canadian National Railways.—Table **21** analyses the increase in the debt and interest charges of the system, including both Canadian and United States lines. The table shows to whom the liabilities which have accumulated up to the end of 1933 and the new funds available each year are payable. To define clearly what is included under debt due to the Dominion Government in Table **21**, the appropriations for the Canadian Government Railways have been separated from the loans and advances to the remainder of the system. The Canadian Government Railways include the Intercolonial, National Transcontinental, Prince Edward Island and several other smaller railways in the Eastern Provinces, together with the Quebec Bridge. The Hudson Bay Railway was included in the Canadian Government Railways until 1926, when it was transferred back to the Department of Railways and Canals for completion, and appropriations on its account were deducted. These Canadian Government Railways appropriations do not include the operating deficits of the Canadian Government Railways for 1919 and subsequent years nor the deficits of other portions of the Eastern Lines since July 1, 1927, but include investments for construction, purchase and working capital of the Canadian Government Railways. As the book value of these properties is included on the assets side of the balance sheet, the cost of these roads to the Dominion is included in the liabilities of the system as an offset. The construction or purchase of these roads was financed by the Dominion from the Consolidated Revenue Fund, and consequently no interest on such expenditures is allowed for in the railway accounts.

In a rather different class are the loans and advances made by the Government to the Canadian National Railways or constituent companies on notes, bonds and receiver certificates with accrued simple interest ranging from 3½ to 6 p.c. In computing the public debt of Canada the Finance Department considers these railway loans and advances as "non-active assets" similar to investments in canals, public works, etc., and as such does not subtract them from the gross debt in computing the net debt; also, no interest is charged by the Finance Department on the railway advances. The railways, however, debit their accounts with the accrued interest on these Government advances, all of which remains unpaid.

The debt due to the public includes debenture stock maturing and perpetual, and bonds and mortgages of the constituent railways, but does not include the capital stock of the Grand Trunk Railway held by the Government, nor the cost of acquiring the same. Likewise it does not include the capital stock of the Canadian Northern system. The stock of the Grand Trunk Pacific is all held by the Canadian National system and is therefore not included either.

Table **22** analyses the capital received by the Canadian National Railways. In addition to the funds available under long-term debt, as shown in Table **21**, the railways have frequently had short-term loans. Table **22A** shows how the capital thus made available has been expended.

21.—Long-Term Debt[1] of Canadian National Railways (Including Appropriations for Canadian Government Railways), Showing Principal Outstanding at ends of calendar years 1922-33, and New Funds Raised, calendar years 1923-33.

[1]See Table 22 for short-term loans. [2]Deficits of Eastern Lines from July 1, 1927, and deficits of remainder of system from Jan. 1, 1932, are paid by the Dominion Government and are not included herein. (See Table 22.) [3]Includes $216,207,142 perpetual debenture stock guaranteed as to interest only, formerly Grand Trunk guaranteed bonds. [4]Including Hudson Bay Railway $14,531,706. [5]Amounts outstanding as at dates constituent lines were taken over by Canadian National, *viz.*: Canadian Northern, Sept. 30, 1917; Grand Trunk Pacific, Mar. 9, 1919; Grand Trunk, May 21, 1920; Canadian Government, Mar. 31, 1919 (actual date of transfer Nov. 20, 1918). [6]Repayment of temporary loan of $14,259,436. [7]Central Vermont Railway bonds of $9,902,866 were included in annual report but excluded here. [8]Includes Government loans prior to July 1, 1927, to lines other than Canadian Government Railways, now comprising the Eastern Lines—capital $2,565,605; deficit $8,835,176; total $11,400,781—on which no interest has been accrued since July 1, 1927. [9]Temporary loan of $4,884,639 repaid and temporary loan of $8,561,500 for redemption of Central Vermont Railway bonds repaid and included in guaranteed bond issue of $50,000,000, June 15, 1930. [10]$42,118,413 advanced in 1932 to meet 1932 cash deficit of $53,422,662 deducted in 1933. [11]Does not include $40,189,127 cash deficits of Eastern Lines for 1927-33, $105,686,481 cash deficits of Canadian National Railways 1932-33, a total of $145,875,608. [12]The appropriations for Canadian Government Railways include a credit of $43,374,021 for properties transferred to other Government Departments, etc., not representing new funds available, *viz.*—Hudson Bay Railway, 1926, $15,245,889—Halifax Harbour Commission, 1928, $12,990,806—Saint John Harbour Commission, 1928, $645,183—1921-22 deficits, credited in 1930, $12,499,126—Quebec Bridge adjustment, $933,564, and other adjustments, $300,538. [13]Unpaid accrued interest on Government loans does not represent new funds available.

				Cash on Hand Dec. 31, 1933	15,599,358
					786,176,643

[1]Includes 1932 deficits paid in 1933 but not the following portions of 1933 deficits paid in 1934: Eastern Lines $688,777; Canadian National $12,291,921; total $12,975,698. [2]Excludes accounting adjustments and appropriations for insurance fund—(see note 3, Table 20). [3]Excludes transfer of $31,583,630 investment in Central Vermont Lines transferred from "Investments in Affiliated Companies" to "Investment in Road and Equipment" in 1930 accounts, also transfer of $30,571,817 for Canadian Government Railways property transferred per note 12 of Table 21, $17,827,041 for retirement of abandoned lines, principally duplicate lines of Grand Trunk Pacific and Canadian Northern, west of Edmonton, held in suspense until 1930, $3,021,486 for Toronto Suburban Railway for which a receiver was appointed in 1931, and other miscellaneous additions and deductions. [4]See note 6 for transfer to "Investment in Road and Equipment".

The figures given in Tables **22** and **22A** differ from the figures given in the annual reports of the railways by reason of certain accounting adjustments (not representing new funds or expenditures) entered into the accounts during the period but excluded therefrom. It should be noted, therefore, that the total cash deficit of $282,004,297 for the period 1923-33 does not include $12,199,307 of accounting adjustments and $9,634,306 appropriated for investment in the Insurance Fund. If these items are included, the total deficit for the eleven-year period is $303,837,909 as shown in Table **20**.

Table **23** has been compiled to reconcile the investments in and loans to the Canadian National Railways (including Canadian Government Railways) as shown in the Public Accounts for the fiscal year ended Mar. 31, 1934, with the debt to the Dominion Government shown in the railway's balance sheet, Dec. 31, 1933. The last section of the table shows the adjustments to the statement in Public Accounts which make up the difference.

Table **24** shows the assets of the Canadian National Railways at Dec. 31, 1922, and at Dec. 31, 1933, with the increase or decrease for the eleven-year period.

23.—Adjustments Accounting for Difference in Railway Obligations as shown by Public Accounts, Mar. 31, 1934, and by Canadian National Railways Balance Sheet, Dec. 31, 1933.

PART III.—ELECTRIC RAILWAYS.*

The cheap and reasonably rapid conveyance of human beings is a necessity of modern urban life. One important means by which this necessity is supplied throughout Canada is the electric street railway, generally operated by the hydro-electric energy which is so important a feature of Canadian economic life.

Historical.—Replacing the horse-car systems, used in Montreal and Toronto as early as 1861, electric street railways were first seen in operation in Canada in 1885, when a successful experimental railway was constructed and operated at the Toronto Exhibition grounds. Before many years their safety and convenience resulted in the discarding of the older system. An electric system 7 miles in length was opened at St. Catharines in 1887, using the double overhead trolley. The second electric railway in Canada commenced operations in Vancouver, in June, 1890. This was followed by the completion of the Ottawa Electric Railway in 1891, and the electrification of the Montreal and Toronto systems in 1892. The

* Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch publishes an annual report on Electric Railways in Canada.

street railways of other eastern cities were generally electrified during the 1890's, while in the newer western cities electricity was used from the commencement. In the cities of Eastern Canada, electric street railways are generally operated by private companies under city franchises, while in a considerable number of cities in Ontario and the West the street railways are owned and operated by the municipalities, a fact indicated in Table **28.** In 1921, on the expiry of the 30-year franchise of the Toronto Street Railway Co., the railway in this second largest city of Canada was taken over by the city and is now being operated by a transportation commission.

Many difficulties are met in operating the cars during the winter season, owing to snow. This, however, has been overcome by the use of sweepers, scrapers and ploughs. The single overhead trolley system has been found the most suitable and is in general use. During the past few years an increasing number of motor buses have been used; in 1924 only 48 were operated, but by 1933 the number had increased to 531.

In addition to street railways in the cities there are several systems serving suburban areas and also doing an interurban business, but this latter class of service is fast being supplanted by motor bus service.

Development of Electric Railway Traffic.—Figures for the year 1893 show that 30 companies, with a paid-up capital of about $9,000,000, operated 256 miles of railway. By 1897, 35 companies made returns showing 583 miles of track, 1,156 cars, 26,431,017 miles run, 83,811,306 passengers carried and capital of $18,727,355. In 1904, 44 companies showed 766 miles of track, 2,373 passenger cars, 42,066,124 car miles run, 181,689,998 passengers and capital of $50,399,188. The statistics for 1933 show that during that year 41 companies with a capital of $200,098,870, had 1,864 miles computed as single track, 3,773 passenger cars, 531 buses, 298 freight cars and 45 electric locomotives, 119,162,796 car miles run, and 585,385,094 fare passengers. The number of employees in the service of electric railways on Dec. 31, 1933, was 14,883, as compared with 15,961 in 1932. Total salaries and wages for the year 1933 were $18,692,236, as against $21,534,419 in 1932.

Statistics of Electric Railways.—Summary statistics of the operation of electric railways in Canada from 1911 to 1933 inclusive are given by years in Table **25.** It may be noted in this table that the carriage of freight reached its maximum in 1928, with 3,888,672 tons, while the number of fare passengers carried in 1929 reached a new record of 833,496,866, decreasing in 1933 to 585,385,094. In Table **26** statistics of mileage and equipment are given for the latest four calendar years, and statistics of the capital liability of electric railways are furnished for the years 1908-33 in Table **27.** Detailed figures of the mileage operated, the capital liability, the earnings, operating expenses, passengers carried, employees and salaries and wages, are given for 1932 and 1933 in Tables **28** and **28A,** while Table **29** shows by years from 1919 to 1933 the number of passengers, employees and others killed and injured on electric railways in Canada.

25.—Summary of Statistics of Electric Railway Operation, years ended June 30, 1911-19, and calendar years 1919-33.

NOTE.—For figures for 1901-10, see p. 676 of the 1933 Year Book.

PART IV.—EXPRESS COMPANIES.*

"Express service is an expedited freight service on passenger trains". But express companies do not own the means of performing their services; they use railway facilities by virtue of contracts with the railway companies. Express companies in Canada have had close relations with the railways practically from the beginning. A brief history of the various express companies will be found on pp. 611–612 of the 1926 Year Book.

Before 1915, an express company in Canada was not liable for delay or damage caused by anything quite beyond its control, thus maintaining itself as an entity separate from the railway company. Thenceforth an express company became liable for delay or injury of goods if either was caused by the railway company in whose cars the goods were being carried.

Goods are sent by express for quick transit, so that express rates do not compete with freight rates. Thus in its first tariff the Dominion Express Co., in pursuance of its contract with the Canadian Pacific Railway, gave a rate of 2½ times the maximum first-class railway freight rate for the same goods carried the same distance. The majority of the contracts between express and railway companies for carrying express freight are on the basis of a percentage of the gross express revenue. The rates are subject to the approval of the Board of Railway Commissioners.

Express Company Operations.—During 1933, the latest year for which the statistics of the Transportation Branch of the Dominion Bureau of Statistics are available, there were three Canadian and one American express organizations operating in Canada. The Canadian Pacific Express Co., formerly the Dominion Express Co., is a subsidiary of the Canadian Pacific Railway and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Canadian National system is handled by a department of the railway. When the Central Canada, the Edmonton, Dunvegan and British Columbia and the Alberta and Great Waterways railways were amalgamated to form the Northern Alberta Railways Company, the express business was handled by a department of the new company from Nov. 1, 1929. The Railway Express Agency, Inc., operates over the Canadian sections of United States railways and over the route from Skagway to points in Yukon. These companies are all organized under powers conferred by Acts of the Dominion Parliament and their business consists in the forwarding of parcels, the transfer of baggage and the issue of money orders, travellers cheques, letters of credit and other forms of financial paper. The total capital liabilities of the three Canadian companies and departments stood at $6,244,173 on Dec. 31, 1933.

Statistics of the receipts and expenses of express companies in Canada are given in summary form for all companies for the years 1919 to 1933 in Table **30**, and for each company for the years 1932 and 1933 in Table **31**. In these tables the amounts paid by express companies to the carriers, *i.e.*, railways, steamship lines, etc., for transporting the express matter, are shown under the heading "express privileges". Table **31** also shows the mileage operated by each company in 1932 and 1933. Of the total of 62,405 miles, 42,471 were over steam railways, 279 over electric railways, 14,227 on ocean steamship services (mainly by the Canadian Pacific lines), 5,176 miles on inland or coastal steamboat routes and 252 miles over other carriers.

*Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch issues an annual report on Express Statistics.

30.—Summary Statistics of Revenues and Expenses of Express Companies, calendar years 1919-33.

NOTE.—Similar figures for the years ended June 30, 1911-19, were published at p. 673 of the 1927-28 Year Book.

Calendar Year.	Gross Earnings.	Operating Expenses.	Express Privileges.	Net Operating Revenue.
	$	$	$	$
1919	24,933,219	13,227,652	12,936,615	−1,231,048

PART V.—ROADS AND HIGHWAYS.*

Historical.—The early roads were auxiliary to water routes as avenues of transportation. They were used during the summer season, when portages were necessary to avoid obstacles to river and lake travel, and during the winters, when ice prevented navigation. Even the extensive system of waterways of Eastern Canada was an inadequate means of communication between points of settlement in a rapidly growing colony, and the need for overland routes manifested itself in the introduction of the system of common roads which prevailed under the old *régime*. Not only did the crude early roads serve the needs of the settlers, but also those of the British, French and American armies during the numerous campaigns. Soldiers were frequently employed, in times of peace, on road construction in different parts of Upper and Lower Canada.

The first important highway in Canada extended along the north shore of the St. Lawrence from Quebec to Montreal, being gradually completed with the growth of the French settlements. In Upper Canada, one of the earliest roads (Yonge St.) was that from Toronto to lake Simcoe, completed in 1794 under the direction of Governor Simcoe, the work being done by the Queen's Rangers. This road not only gave access to the area north of Toronto, but also provided a more convenient route than that of the Ottawa river from the trading posts on the Upper Lakes to the centres of population along the St. Lawrence. Montreal was joined to Kingston by road in 1816, and in the following year to Toronto. Thereafter, other highways to inland settlements, from points served by water routes, began to increase in number, as it became apparent that they were essential to the commercial life of the country for transporting supplies to the settlers and bringing their products to the central markets of the colony. The system of posts, which had been established about the beginning of the nineteenth century, necessitated passable routes between the various points, and by 1827 a through road was available between Halifax and Amherstburg, comprising for the most part the old Kempt road, the York road, Dundas street and the Baldoon road. From this trunk line of communication branch roads extended north and south to the more important centres of population in the two Canadas. The cost of construction of these roads was high, and travel by stage coach was tedious and costly. As late as 1850 some points in central Ontario were still inaccessible to any vehicle. Later years, however, have brought with them improved methods of construction and a resulting reduction in expenses, together with an improvement in the wearing qualities of the more important highways.

Recent Highway Development.—The growth of motor traffic during and since the War has greatly stimulated the movement for increased and improved road construction. Good roads associations assisted by the automobile clubs are to be found in most of the provinces for the education of the public in the need for improved highways. With the rapid increase in the percentage of motor car owners to the population (see pp. 737-738) the demand for improved roads became insistent after the War. Furthermore, the advantages to be gained by attracting touring motorists have been a powerful incentive to governing bodies to improve trunk roads and scenic highways within their jurisdictions. One sphere where the motor car has been of special economic advantage has been in rural areas, where its speed and economy are a great improvement over the old horse-drawn vehicle.

*Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics, which publishes an annual report entitled "Highways and Motor Vehicles in Canada".

As a result, in the Census of 1931 every second farm reported a farm-owned motor vehicle (1·96 farms per farm-owned motor vehicle). This widespread rural ownership of automobiles has resulted in the improvement of secondary rural roads.

A table of road mileage in Canada follows. These roads do not include those within the boundaries of urban municipalities and average about one mile of road for each 10 rural inhabitants or for each 26 persons, both rural and urban. There are great stretches of country in the northern portions of Quebec, Ontario, the Prairie Provinces and British Columbia with very few people and very few roads, but the southern portions are well supplied. A Trans-Canada highway is now under construction, running from the Atlantic to the Pacific oceans entirely in Canadian territory.

[1] Manitoba and Saskatchewan figures are as at April 30, 1934. [2] B.C. figures are as at Mar. 31, 1933. [3] Includes 156 miles of other classes.

The great improvement indicated above in the extent and character of Canadian highways has entailed the expenditure of large sums by governing bodies, chiefly provincial or municipal authorities, as roads are under their jurisdiction. Unfortunately, there are no comprehensive or comparable statistics available regarding these expenditures prior to 1928. Expenditures by the Dominion Government have taken the form of subsidies to the provinces for specific highways and have been made under the Canada Highways Act, 1919, largely in the few years immediately after the War, and under relief legislation during the present depression to aid in providing useful employment. These subsidies paid in the years 1931-33 are shown in Table **34.**

The Canada Highways Act.—Partly in response to the general demand for improved highways and partly to increase civilian employment at the end of the War, the Dominion Parliament, by c. 54 of the Statutes of 1919, authorized the expenditure of $20,000,000 for the purpose of constructing and improving the highways of Canada during the five years succeeding the passage of the Act. In its apportionment, grants of $80,000 were made to each province during each of the five years, the remainder being allotted in proportion to their respective populations. By c. 4 of 1923 and c. 4 of 1925 the operation of the Act was extended to April 1, 1928. A table on p. 669 of the Canada Year Book, 1929, shows the working of the Act and the allocation of expenditure as between the Dominion and the various provinces down to Mar. 31, 1928, by which time the grant had been expended. Road projects subsidized under the Act amounted to 8,753 miles with an estimated subsidizable cost of $49,581,192.

Road Expenditures by Provinces and Municipalities.—Table 34 presents the available statistics of expenditures on highways in the latest five years. However, the limitations of the statistics in this table should be clearly realized. These expenditures cover only national and provincial highways, secondary highways and other important roads to which the Provincial Governments contribute, together with the bridges or ferries necessary to such highways. The figures do not include expenditures on roads or streets within urban municipalities, nor expenditures by rural municipalities on local roads to which no contribution is made by the Provincial Governments. Expenditures for both construction and maintenance of municipal roads receiving subsidies are often made over and above the amounts upon which subsidies are granted and these extra expenditures are not included. Although the record of expenditures on roads by municipalities is incomplete, the principal highways, which are the expensive roads to construct and maintain, are under provincial jurisdiction, so that only a small percentage of the total expenditures is omitted. In the Maritime Provinces all road expenditures are made by the Provincial Governments.

Provincial Funded Debt Incurred for Highways.—Table 35 shows the funded debts of the provinces outstanding at Dec. 31, 1932 and 1933, incurred for highway development. These amounts should not be confused with estimates of the total investment in highways. The cost of constructing a new road is considerably greater than that of putting a permanent surface on an old road; the latter has been the purpose of much of the provincial expenditure.

The maintenance expenditures by the Provincial Highway Departments during 1933 amounted to $13,117,735, while the annual charges for highway debt were $23,768,656, a total provincial charge of $36,886,391. The provinces collected $48,209,587 in licences, gasolene taxes, tolls, etc., in connection with highway traffic. While these left an apparent surplus of $11,323,196, no provision was made for the cost of administering highway and motor vehicle departments, for traffic patrols, nor for adequate retiring charges on capital expenditures.

35.—Provincial Government Funded Highway Debt and Annual Charges thereon, Dec. 31, 1932 and 1933.

NOTE.—New Brunswick and Ontario as at Oct. 31, Manitoba and Saskatchewan as at April 30, 1933 and 1934. Other provinces as at Dec. 31.

PART VI.—MOTOR VEHICLES.

The earliest motor vehicles were propelled by steam, the history of the gasolene motor car commencing with the successful construction of a gasolene engine by Daimler in 1884. Until 1900 France remained the headquarters of the industry, possessing in that year more than half of the 10,000 cars in operation in Europe, while in the United States the number of cars was only about 700. Shortly afterwards, the development of the Ford car resulted in a keen competition to bring motor cars within the reach of the average man, profits being secured from large production rather than high prices. Detroit became the centre of the automobile industry of the United States and the Canadian side of the Detroit river became the headquarters of the Canadian industry. As a consequence, the population of the border towns Windsor, Walkerville and Sandwich greatly increased between 1911 and 1921, while the town of Ford (now East Windsor), which had no existence in 1911, had 5,870 inhabitants in 1921 and 14,251 in 1931, when the aggregate for the "Border Cities" was 98,179. Problems of regional location have resulted, during more recent years, in a gradual shifting of the centre of the industry, and the Toronto and Oshawa districts now rival in importance the older established centre on the Detroit river.

Like many other inventions, the motor car commenced as a toy, then became a luxury of the rich, while now it ranks as a necessity of life to a large proportion of the population. In the past few years, the motor truck and the motor bus have assumed considerable economic importance, and are separately classified in Table **37.**

Up to the present the motor vehicle has affected the passenger traffic of the steam and electric railways more than the freight. Thirteen inter-urban and ten urban electric railways have ceased operation since 1926, and passenger traffic on the smaller electric railways and on the steam railways has declined during the last decade instead of increasing with increased population. This diversion of passenger traffic has been effected largely by the private automobile, although the motor bus is rapidly becoming more important and is now operating between all large centres. The motor truck is also carrying an increasing amount of freight, although no statistics showing the tonnage handled are as yet available.

The automobile manufacturing industry in Canada has made very rapid growth since its beginning about the year 1905, two of its chief tendencies during the period having been a consolidation of smaller firms into large units and the adoption of large-scale methods of production, similar in many ways to those of the United States' industry. A brief statement of its history, with statistics of production, etc., is to be found on pp. 432-436 of the Canada Year Book, 1924, while more recent statistics of production will be found in the Manufactures chapter of this volume. (Chapter XIV.)

Section 1.—Statistics of Motor Vehicle Operation.*

Registration.—The increase in the use of motor vehicles in Canada has been very rapid. In 1904 the number of motor vehicles registered in Ontario was only 535. In 1907, 2,130 motor vehicles were registered in six provinces and in 1908, 3,033 in eight provinces, the motor car being at that time prohibited in Prince Edward Island. From these small beginnings Table **36** shows an increase to 1,232,486 motor vehicles by 1930. For the last three years decreases have been recorded. In Table **37** the numbers of motor vehicles registered in 1932 and 1933 are given by provinces, classified as passenger cars, commercial cars or trucks, motor buses and motor cycles.

The average population per vehicle registered was 9·9 in 1933. Canada ranked fourth in this respect, the United States being first with 5·3. On the basis of the total registration of 1,114,503, only three countries had larger numbers in 1932, *viz.*, United States, 23,827,290; France, 1,890,174; and Great Britain and Northern Ireland, 1,725,025.

*Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. The subject is treated in greater detail in "Highways and Motor Vehicles in Canada", published annually by this Branch.

36.—Numbers of Motor Vehicles Registered in Canada, by Provinces, calendar years 1907-33.

NOTE.—The numbers of motor vehicles in Yukon are included in the totals for Canada, 1914-33.

[1]Revised figures.

In Table 37 the registration of motor vehicles in 1932 and 1933 is given according to the general type or purpose of the cars in use in each of the provinces.

37.—Types of Motor Vehicles Registered in Canada, by Provinces, calendar years 1932 and 1933.

Province.	Passenger Cars.[1]	Commercial Cars or Trucks.[2]	Motor Buses.	Motor Cycles.	Total.[3]

[1]Includes taxicabs.
[2]Includes tractors, road machines, flushers, and municipal fire engines, etc., in Ontario and Quebec.
[3]Revised to exclude dealers' cars and include road tractors.

Government Revenue.—The taxation of motor vehicles, garages, chauffeurs, etc., is becoming a lucrative source of Provincial Government income. In every province the operation of automobiles and motor cycles is dependent on carrying licences duly issued by the various authorities, while similar licences permit the maintenance of garages and the driving of cars or trucks by hired chauffeurs. Perhaps the most recent form of levy on the use of motor vehicles is the gasolene tax, which has been assessed in all provinces since May 1, 1928. The following table shows the provincial revenue for the years 1932 and 1933, indicating, at the same time, the more important sources from which it is derived.

38.—Provincial Revenues from the Taxation of the Distribution and Operation of Motor Vehicles, for the years 1932 and 1933.

Province.	Passenger Cars.	Trucks.	Motor Cycles.	Dealers' Licences.	Operators and Chauffeurs.	Mileage Tax on Motor Buses and Trucks.	Gasolene Tax.	Total, including Miscellaneous Revenue.

[1]Revenue figures for Ontario are for fiscal year ended Oct. 31. [2]No gasolene tax.

Apparent Consumption of Automobiles in Canada.—The apparent consumption of motor cars in Canada in any year may be computed by deducting the number of cars exported from the sum of the production and imports. In 1933 production totalled 65,852 cars and imports amounted to 1,781, making an available supply of 67,633 cars, but as exports aggregated 20,900 units, the apparent consumption was 46,733 cars.

Table **39** shows the statistics worked up on this basis for the years 1917 to 1933. Prior to 1925 the figures of apparent consumption do not show a pronounced trend but between 1925 and 1929 they increased substantially. From 1929 to 1932 the decrease was rapid and continuous but was practically halted in 1933, in which year production showed some improvement but mainly on account of the export demand.

39.—Apparent Consumption of Automobiles in Canada, 1917-33.

Year.	Production.	Imports.	Total Supply.	Exports.	Re-Exports.	Total Exports.	Apparent Consumption.

Section 2.—Motor Vehicle Acts and Regulations.*

In all provinces a motor vehicle must be registered and each person who operates a car must be licensed as a chauffeur, an operator, or a beginner. The following is a brief synopsis of the regulations in force in each province.

Prince Edward Island.—Under the Highway Traffic Act, 1930, and Regulations, all cars must be registered in the office of the Provincial Secretary. In addition to a registration fee of $2.50 for cars not previously registered in the province and a marker fee of $1, an annual tax of 50 cents per 100 pounds weight is payable on Mar. 1, but is not required of non-residents if the Province or State of origin grants exemptions to Prince Edward Island privately-owned passenger motor vehicles. Every car must have a lock or other device to prevent if from being operated when left unattended. The speed limits are: in cities, towns and villages 15 miles an hour; on approaches to steep descents, bridges, or highway crossings 10 miles an hour; on roads outside cities or incorporated towns on which the driver has not a clear view for at least one hundred yards free from turns and intersections 15 miles an hour; and in other places a speed reasonable and proper.

Nova Scotia.—The Motor Vehicle Act requires cars to be registered by the Motor Vehicle Branch, Department of Highways, which issues permits renewable annually on Jan. 1, but usually extended to Mar. 31. Cars belonging to persons residing outside of Nova Scotia need not be registered, if registered where the owners reside and operated for private use. This privilege is given for not more than three months in each year. If owners come into the province to reside permanently or to carry on business, they must register. Every person who operates a motor vehicle must be licensed as a chauffeur, an operator, or a beginner. Motor vehicles must be equipped as provided in the Uniform Vehicle Code. There is no set speed limit. The rate of speed must be reasonable and proper, and 20 miles per hour is *prima facie* reasonable and proper in a residential district, at intersections, passing schools, etc., and 40 miles per hour is *prima facie* reasonable and proper in open country. Commercial motor vehicles having a gross weight in excess of 4,000 lb., are limited to a maximum speed of 25 miles per hour.

*The information in this Section has been revised by the officials in charge of the administration of Motor Vehicle Acts and Regulations in the different provinces.

New Brunswick.—Under the Motor Vehicle Act, 1934, the registering and licensing authority is the Motor Vehicle Branch, Department of Public Works. An operator of a motor vehicle must carry a driver's licence. Cars must be registered each year and, besides the registration fee, an annual fee is payable on Jan. 1. A non-resident tourist may not, without registering in New Brunswick, operate a car registered in another Province or a State during more than 90 days in any year or such shorter time as is reciprocally granted in the Province or State in which the tourist's vehicle is registered. The speed of a motor vehicle must not be greater than is reasonable or proper having due regard to the traffic and use of the highway or such as to endanger life or property. Commercial vehicles must not exceed 30 miles per hour. Penalties may be suspension of driver's licence and fine or imprisonment.

Quebec.—The law regarding motor vehicles is contained in the Quebec Revised Statutes, 1925, c. 35. Cars must be registered in the Office of the Provincial Treasurer and re-registered annually on Mar. 1. Certain government and municipal cars and farm tractors are given free registration, while exemptions are made in the case of pleasure cars registered in other provinces and certain commercial vehicles, but only in cases specified in Article 10 of the Act. Cars must have mufflers and, when left unattended, must be locked in such a way as to prevent operation. The speed limits are: in cities, towns and villages, 20 miles an hour; on highways where the land is closely built up, 20 miles an hour; and in open country, 30 miles an hour. Motor vehicles must be stopped before proceeding over a railway crossing. Motors must stop for street cars which are standing to take on or discharge passengers, and must reduce the speed to 16 miles an hour when meeting another vehicle. These rates have reference to pleasure cars only. In the case of a commercial vehicle having non-pneumatic tires, a speed of 8 miles an hour when loaded and 10 miles an hour when unloaded is allowed. When equipped with pneumatic tires the corresponding rates are 12 and 15 miles an hour. Motor buses are allowed a speed of 30 miles an hour in open country.

Ontario.—In this province the Highway Traffic Act, under the administration of the Motor Vehicles Branch of the Department of Highways, regulates the operation of motor vehicles on the highways. Motor vehicle permits and drivers' licences are issued for the calendar year. Vehicles owned by residents of other provinces who do not reside or carry on business in Ontario for more than three consecutive months in each year may be operated in Ontario without Ontario registration plates. Passenger cars registered in the United States may be operated in Ontario without Ontario plates for thirty days in any one year. The speed limit in cities, towns and villages is 20 miles an hour; in open country, 35 miles an hour. At intersections, level railway crossings and where the view of the driver is obscured, the speed allowed is 10 miles within and 15 miles outside of cities, towns and villages. Vehicles must not pass street cars which are stationary for the purpose of taking on or discharging passengers. At intersections the motor vehicle on the right has the right of way and before entering or crossing a through highway a vehicle must be brought to a full stop. A motor vehicle must be equipped with non-glare headlights, muffler, windshield wiper and mirror. Under Part XIII of the Act a person convicted of certain serious offences in connection with the operation of motor vehicles or a person against whom an unsatisfied judgment is outstanding is required to file proof of his financial responsibility. All accidents resulting in personal injury, or property damage apparently exceeding $50, must be reported to the nearest provincial or municipal police officer.

Manitoba.—Under the Highway Traffic Act, 1930, cars must be registered in the office of the Municipal Commissioner, and registration is renewable annually on Jan. 1. On April 1, $\frac{5}{6}$ of the annual fee and on Aug. 1, $\frac{1}{2}$ of the annual fee is payable. All drivers must be licensed. No person, not a resident of the province, may operate without a licence for a period exceeding 30 days from the date of entry, unless the Province or State in which he resides gives reciprocity in this respect. Penalties for driving a car while intoxicated include imprisonment, suspension of driver's licence and impounding of the car. No person may operate a motor vehicle upon any highway or street at a greater speed than is reasonable and proper, having regard to the condition of the highway and the traffic. The onus of proof is on the motorist. No ray of light from any headlight may be thrown in a horizontal direction at a greater height from the ground than 42 inches in front of the motor vehicle when travelling on the highways. The use of searchlights and glare headlights is absolutely forbidden on highways. Number plates must be carried on the front and rear of the vehicles so as to be plainly visible. In the event of an accident the driver involved must render every help possible, and give his name and address to the police officer or, if no officer is at hand, report to the nearest police station or officer. Failure to comply may involve a fine of $50 or 30 days imprisonment.

Saskatchewan.—The licensing authority under the Vehicles Act is the Minister of Highways. Licences expire annually on Dec. 31, and for private vehicles are computed on the wheel base, the minimum fee being $10, the maximum $32·50. The licence fee in respect of cars registered on and after Aug. 1 is one-half the annual fee. All motor vehicles except motor cycles must expose two number plates. The registration fee for a motor cycle is $6. The fee for motor trucks is computed on the gross weight. The owner of every truck to be operated for gain before securing a licence must obtain a permit from the Public Utility Board. Besides two licence plates, he receives two weight plates, embossed with the gross weight for which the licence fee has been paid.

The fee for a chauffeur's licence is $5. The fee for livery privileges is $10 more than the fee paid for private licence for the vehicle to be registered. Permits to operate for gain must be obtained from the Public Utility Board. Every driver of a motor vehicle not in possession of a chauffeur's licence must secure an operator's licence.

A non-resident may use his motor vehicle for not more than three months in any year, but a non-resident operating a truck for gain must comply with the Public Utility Board requirements. Cities, towns and villages have authority to regulate speed limits within their boundaries. A loaded truck shall not be driven at more than 25 miles per hour, nor an unloaded truck at more than 35 miles per hour, while no motor vehicle may be driven at more than 35 miles per hour when passing any motor or other vehicle going in the opposite direction. Otherwise, speed is governed by the amount of traffic, the nature, condition and use of the highways. No motor vehicle and its load may have a greater width than 96 inches, while no vehicle may have a length of more than 33 feet, and no combination of vehicles coupled together may have a length of more than 85 feet. The maximum height of a vehicle including its load is 14 feet and the maximum weight of any vehicle and its load must not exceed 20,000 lb. Motor vehicles must stop for street cars which are taking on or discharging passengers. Should a driver on leaving a stopping place in a city or town desire to turn, he may do so only at an intersection of the public highway.

Alberta.—The law relating to motor vehicles is contained in the Vehicles and Highway Traffic Act, 1924. The speed limits are: 20 miles an hour in cities, towns and villages; 10 miles an hour at street crossings and bridges; and 30 miles an hour outside cities, towns and villages. A motor car may not pass a street car which has stopped for passengers to get on or off. A resident of any other province of Canada, entering Alberta for pleasure touring for a period not greater than six months, is required to have complied with the motor-vehicle laws of his own province, and on entering Alberta to register with the Provincial Police. Residents of the United States entering Alberta for touring purposes may carry with them their customs certificates in lieu of registration. The Provincial Secretary may revoke or suspend the licence of any chauffeur convicted under the provisions of the Liquor Act of selling or having for sale intoxicating liquor. Provision is made for the impounding of cars where the owners or drivers are convicted of driving cars while intoxicated or convicted under other sections of the Act relating to speeding and juvenile driving. There is provision against the carrying of loaded weapons in an automobile—a preventive measure against accidents during hunting trips.

British Columbia.—Under the Motor Vehicle Act and amending Acts, all motor vehicles are to be registered with the Commissioner of Provincial Police. Trailers must also be licensed. Motor vehicles registered outside of the province may be used for touring purposes for any period not greater than that allowed by owner's place of residence to touring motor-vehicles registered in British Columbia and in no case longer than six months providing that their owners obtain non-resident touring permits or carry the customs permits in the case of residents of the United States. All persons driving motor vehicles must carry current driver's licences.

Motor vehicles are to be driven in a careful and prudent manner at all times. The onus is on the driver for driving to the common danger if driving at a greater speed than 20 miles per hour in any city, town or village, or 30 miles per hour outside cities, towns or villages, or greater than the maximum rate of speed stated on signs erected on certain portions of the highway. A motor vehicle may not pass a standing street car at more than 5 miles per hour, if such street car is not taking on or discharging passengers, and must stop at least 10 feet from the passenger exit if such street car is taking on or discharging passengers (in cities where safety zones are provided, motor vehicles are allowed to pass between safety zone and curb at a rate as set by by-law). A motor vehicle must not exceed a speed of 15 miles per hour when passing schoolhouses between the hours of 8 a.m. and 5 p.m. of any day on which school is regularly held, or public playgrounds for children between dawn and dusk. Accidents in which death or personal injury has occurred, or in which loss or injury to property apparently exceeding $25 is sustained, must be reported to the police.

No person shall ride as a passenger on a motor cycle in front of the person driving or operating the motor cycle. Provision is made for the surrender of drivers' licences upon conviction for an infraction of the Act or Regulations or of Section 285 of the Criminal Code; upon arrest or indictment for manslaughter a driver's licence is suspended. Drivers' and owners' licences of all persons convicted for certain serious offences in connection with the operation of motor vehicles, as well as all persons against whom an unsatisfied judgment for bodily injury or property damage in excess of $100 is outstanding, are suspended until such time as proof of financial responsibility is furnished by them.

Yukon.—The Motor Vehicle Ordinance, No. 14, 1914, with amendments, requires all cars to be registered in the office of the Territorial Secretary, who issues certificates renewable annually on April 1. A non-resident may operate an unregistered motor for not more than 90 days. In cities, towns and villages the speed limit is 15 miles an hour, and 10 miles an hour at street intersections.

PART VII.—AIR NAVIGATION.*

During 1933 civil aviation was well maintained. Aircraft are a ready means of obtaining accurate information of conditions in remote and unsettled parts, and provide easy access thereto. Their use in developing and conserving natural resources has increased every year. Air-mail and air-transport lines are in operation in many parts of the Dominion.

Civil aviation in Canada is divided into two classes: (1) civil operations, carried out for other Government Departments under the Royal Canadian Air Force; (2) commercial aviation, under the regulation of the Controller of Civil Aviation. Both are under the Department of National Defence.

Civil Government Air Operations.—This branch carried out flying on forest fire patrols, fire suppression, oblique and vertical photography for surveys, transportation, etc., for different Government Departments in various parts of the country.

Provincial Operations.—The Ontario Provincial Air Service owns and operates 19 aircraft on forest fire protection, transportation, air photography and sketching in northern Ontario. Operations covered an area of about 800 miles from east to west, and 400 miles from north to south. A total of 8,731 hours was flown during 1933, as compared with 9,968 hours in 1932. The Manitoba Government Air Service operated 5 aircraft on forest protection in the province for the Forestry Branch; a total of 770 hours was flown on this work. The Saskatchewan Government Air Service operated 4 aircraft on forest protection in the province for the Department of Natural Resources; a total of 93 hours was flown on this work. British Columbia and Quebec contracted with commercial aircraft operators for flying required.

Commercial Aviation.—During 1933 there were 90 commercial aircraft operators in Canada. Their activities included forest fire patrols, timber cruising, air photography, transportation of passengers, express and mail, instruction, advertising, short passenger flights, etc., in various parts of the country.

Air-Mail Services.—Regular air-mail services were established in December, 1927. During 1933 commercial firms operated the following air-mail routes under Post Office Department contracts: *Winter Services.*—Leamington-Pelee Island; Quebec-Seven Islands-Anticosti; Moncton-Magdalen Islands; Moncton-Charlottetown. *Summer Services.*—Rimouski-Montreal; Vancouver-Victoria. *Yearly Services.*—Montreal-Albany; Sioux Lookout-Red Lake area; Amos-Siscoe-Pascallis; McMurray-Aklavik; Winnipeg-Pembina; Peace River-North Vermilion; Lac du Bonnet-Bissett; Prince Albert-lac La Ronge; Big River-Isle à la Crosse. Mail to the extent of 539,358 lb. was carried under contract, without loss or damage, during 1933. (See p. 745.)

*Revised under the direction of J. A. Wilson, Esq., Controller of Civil Aviation, by A. E. Heatley, Department of National Defence.

Encouragement of Aviation.—To encourage a more widespread interest and knowledge of aviation, the Department of National Defence, since 1928, has assisted by issuing two light aeroplanes and making grants to each of the twenty-three flying clubs in the following localities: Halifax, Cape Breton, Saint John, Montreal, McGill University, Brant and Norfolk, Fort William, Hamilton, Kingston, London, Ottawa, St. Catharines, Toronto, Border Cities, Kitchener, Brandon, Winnipeg, Moose Jaw, Regina, Saskatoon, Calgary, Edmonton, Vancouver. The total membership at present is 2,075. A total of 9,972 hours was flown. 120 members obtained private pilots' licences, and 26 members obtained commercial pilots' licences during 1933. Many aerodromes have been established through this movement.

A large air terminal has been built at St. Hubert, 7 miles south of Montreal. A mooring tower for airships and an aerodrome have been constructed there, and immigration, customs and postal facilities are available. A terminal aerodrome has also been constructed at Rimouski for the despatch and reception of trans-Atlantic mails by air.

Manufacture of Aircraft.—An aircraft industry, to construct in Canada the aircraft and equipment required for aviation, is essential to the sound development of flying. Canadian Vickers, the pioneer firm in Canada, have produced several original types specially suited to operation in Canada. Several aircraft constructors from England and the United States have formed branches in Canada for the assembly and service of their products. The De Havilland Aircraft of Canada, Ltd., established a plant in Toronto; the Curtiss-Reid Aircraft Co. established a factory at Cartierville, Que.; the Fairchild Aircraft Ltd., at Longueuil, Que.; the Bœing Aircraft of Canada, Ltd., at Vancouver; and the Ottawa Car Manufacturing Co., one at Ottawa for A. V. Roe aircraft. Aero engine factories are established for construction or assembly and service of their products as follows: Armstrong-Siddeley Motors, Ltd., at Ottawa; Aero Engines of Canada, Ltd., at Montreal, for "Wright" and "Bristol" engines; Canadian Pratt and Whitney Aircraft Co., Ltd., at Longueuil, Que.

[1]These figures show duplication, since practically all aeroplanes are convertible to float seaplanes.

PART VIII.—CANALS.*

Before the period of extensive railway construction which commenced for Canada in the 1850's, the water routes, more especially the St. Lawrence, the Great Lakes and the Ottawa, were the chief avenues of transportation. These routes were interrupted at certain points, necessitating portages, and to eliminate the toil of unloading, transporting and reloading at the portages the canals of Canada were constructed.

The earliest mention of canals in Canada is in connection with the Lachine canal, begun by early French settlers in 1700, but only after the conquest of Canada by the British were improvements of the main water routes made, and in the early part of the 19th century increased internal and foreign trade and the introduction of steam navigation resulted in more attention being given to this work. Although the canals were constructed primarily for military purposes they soon became essential to the commercial life of the country.

Section 1.—Canal Systems.

There are in Canada seven canal systems under the control of the Dominion Government in connection with navigable lakes and rivers. They consist of the canals: (1) between Port Arthur or Fort William and Montreal; (2) from Montreal to the International Boundary near lake Champlain; (3) from Montreal to Ottawa; (4) from Ottawa to Kingston and Perth; (5) from Trenton, lake Ontario, to lake Huron (not completed); (6) from the Atlantic ocean to Bras d'Or lakes, Cape Breton; and (7) from Winnipeg to lake Winnipeg. By means of these canals a total waterway of 1,846 miles has been opened to navigation, the actual mileage of canals being 509·40.

*Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch publishes an annual report on "Canal Statistics".

A detailed description of the individual canals was given on pp. 626-629 of the 1926 Year Book. Summary statistics of their length and lock dimensions are given in Table **41.**

[1]Navigable depths are occasionally less at times of extremely low water.
[2]Minimum depth between locks 25 feet.
[3]With lake Ontario at elevation 244 feet above sea-level.

Government Expenditures on Canals.—Tables **42** and **43** deal with the expenditures of the Dominion Government on the construction and maintenance of canals. The principal source of revenue is rentals for water for power purposes. All canals, it may be added, have since 1904 been free of tolls to vessels applying for the privilege of locking facilities. The total capital cost of Canadian canals since their construction was begun is set at $249,932,926. The heavy capital expenditures in recent years are due to the construction of the Welland Ship Canal, on which $131,065,440 had been spent up to Mar. 31, 1934. The lock gates were first opened on April 21, 1930, and upper lake vessels with certain restrictions were allowed through. In 1932 the largest of the lake vessels (633 feet long) used the canal and draughts up to 22 feet were accommodated.

42.—Expenditures and Revenues of Canals for Period Before Confederation, 1868-1910, and fiscal years ended Mar. 31, 1911-34.

NOTE.—For the individual years 1868 to 1910, see Canada Year Book, 1916–17, p. 462.

[1]The records relating to cost of construction by the Imperial Government were destroyed by fire in 1852 and the statistics prior to that year are not included in this table.

Section 2.—Canal Traffic.

Tables 44 to 49 deal with the traffic passing through Canadian canals in recent years up to and including 1934. In this latest year the total traffic amounted to 18,069,252 tons, which was a decrease of 711,237 tons from the total for 1933. By the summer of 1931, the new Welland Ship Canal was advanced sufficiently to allow vessels drawing up to 18 feet of water to pass through and, at the opening of navigation in 1932, the allowable draught was increased to 20 feet for the large upper-lake vessels. Later in the season vessels drawing 20½ feet and with cargoes up to 15,900 tons used the canal. Iron ore, which had previously been shipped by rail from Point Edward to Hamilton, has since been shipped through from Lake Superior to Hamilton by water, and increased quantities of coal and other commodities have been shipped through the canal.

For details of traffic handled through each canal, see the annual report on Canal Statistics published by the Bureau of Statistics.

44.—Total Traffic through Canadian Canals, by Nationality of Vessels and Origin of Freight, navigation seasons 1911-34.[1]

NOTE.—For Canadian canal traffic from 1886 to 1899, see 1902 Year Book, p. 398, and for the figures for 1900-10 see the 1933 Year Book, p. 697.

[1]Totals include duplications where vessels use two or more canals.

The Panama Canal.*—The Panama canal, which was opened to commercial traffic on Aug. 15, 1914, is a waterway which is destined to be of the greatest importance to the British Columbian ports, from which vessels now leave direct for Great Britain and European ports throughout the year. As an alternative route to that of the transcontinental railway lines, such a passage by water is of vital importance in the solution of the larger transportation problems of the continent, and while its influence is perhaps more potential than actual, such a check on transcontinental rail rates is a valuable one. During the War the great expectations based upon the opening of the canal were not realized, owing to the scarcity of shipping, but, with the post-war decline in ocean freight rates, an increase in traffic between our Pacific ports and Europe has taken place, and, while the proportion carried in vessels of Canadian registry is comparatively small, the cargo tonnage has nevertheless assumed considerable proportions. During the years ended June 30, 1933 and June 30, 1934, as will be seen from Table **50**, tonnages of 121,875 and 196,204 originating on our eastern coast and tonnages of 134,511 and 189,227 destined for our western coast were carried westward through the canal. The greater importance of the route as one from Pacific to Atlantic ports is illustrated by the 2,201,180 tons originating at western ports and 498,706 tons destined for eastern Canadian ports locked through in the latest period. Strictly intercoastal Canadian cargo during the latest year aggregated 106,519 long tons as compared with 90,802 long tons in 1933. The canal is thus becoming an avenue of trade between Eastern and Western Canada.

The report of the Governor of the Panama Canal Zone for the year ended June 30, 1934, records an increase from 1933 of from 4,494 to 5,533 in the number of transits, an increase from 22,821,876 to 28,566,595 in canal net tonnage and increases from $19,620,459 to $24,063,789 in tolls collected, and from 18,177,728 to 24,718,651 in tons of cargo carried (Table **51**).

With respect to traffic by nationality of vessels and cargo carried, vessels of United States registration carried 11,578,453 tons, or 46·8 p.c. of the total cargo of 24,718,651 tons locked through in the year 1934. British vessels carried 5,193,136 tons, or 21·0 p.c., Norwegian vessels 2,080,833 tons, or 8·4 p.c., Japanese vessels 1,510,916 tons, or 6·1 p.c., German vessels 962,218 tons, or 4·0 p.c.

*Revised, and figures supplied, by courtesy of the Governor of the Panama Canal Zone.

PART IX.—SHIPPING AND NAVIGATION.

Canadian shipping may be divided into three classes: (1) ocean or sea-going shipping; (2) inland or rivers and lakes international shipping; and (3) coasting trade or coastwise shipping. Ocean shipping covers the sea-going vessels arriving or departing from Atlantic and Pacific Coast ports, including St. Lawrence River ports up to Montreal. Inland international shipping is the term used to cover shipping between Canadian and United States ports on the Great Lakes and international rivers and on lakes and rivers accessible to shipping from United States ports such as the Ottawa, Rideau, Trent, etc. (Ferriage is, however, excluded from this and other classes of shipping.) Coastwise shipping or the coasting trade covers shipping between one Canadian port and another on the Atlantic coast, on the Pacific coast and on the inland international lakes and rivers or lakes and rivers accessible to them. It does not, however, include shipping on isolated Canadian waterways, such as the Mackenzie river, lake Winnipeg, lake St. John, etc.

Since the dates between which free navigation is possible down the St. Lawrence are so very important to Central Canada it has been considered advisable to include the following historical statement giving the dates, for years 1882 to 1934 inclusive, respecting the clearance of ice, the opening and closing of navigation, and the first arrivals and last departures of sea-going vessels in the ship channel between Quebec and Montreal.

OPENING AND CLOSING OF NAVIGATION, AND THE FIRST ARRIVAL AND LAST DEPARTURE OF SEA-GOING VESSELS IN THE HARBOUR OF MONTREAL, SINCE 1882; ALSO DATES WHEN CHANNEL BETWEEN QUEBEC AND MONTREAL WAS CLEAR OF ICE.

Year.	Channel Clear of Ice, Quebec to Montreal.	Opening of Navigation, Montreal Harbour.	Closing of Navigation, Montreal Harbour.	First Arrival from Sea, Montreal Harbour.	Last Departure for Sea, Montreal Harbour.

[1]1912. [2]1913. [3]1929.

Whereas, in the case of most countries of such extensive coast line, the ocean shipping is much the more important, in Canada the shipping on inland waters, while finally dependent to a large extent on ocean traffic to foreign ports, shares, almost equally with that on the Atlantic and Pacific oceans, the attention devoted to water traffic. The Great Lakes are among the leading highways of the international trade of the world; consequently, the statistics of inland international shipping are included with those of sea-going shipping in Table **52**, while those of sea-going shipping alone will be found in Table **53**.

Tables **52-60**, following, have been compiled or revised from the Shipping Report of the Department of National Revenue for the fiscal years ended Mar. 31, 1933 and 1934.

52.—Sea-Going and Inland Vessels (Exclusive of Coasting Vessels and Ferriage) Arrived at and Departed from Canadian Ports, fiscal years ended Mar. 31, 1911-34.

NOTE.—For the years 1868-1910, see Canada Year Book, 1911, p. 380.

Section 1.—Ocean Shipping.

Canadian ocean shipping dates back to the days of early European fishermen who frequented the shores of Newfoundland and the Maritime Provinces. Ocean-going vessels of that time were crude wooden sailing craft of but 20 or 30 tons burden, entrusted only to skilful and hardy mariners for navigation through little-known seas. Later on exploration and settlement produced a larger volume of traffic, but it was not until the building of ships in Canada by the French assumed some dimensions that traffic became important. The first ocean-going vessels in Canada were probably built by Pont-Gravé, one of the first settlers in New France, and soon afterwards Talon and Hocquart, intendants of the colony, realizing the advantages offered to the industry by the timber resources available, gave it every encouragement. Shipyards were established at Quebec and other points along the St. Lawrence, and these, together with later establishments in the Maritime Provinces and on the western coast, have formed the principal bases of Canadian shipping on the Atlantic and the Pacific.

Canadian shipping attained some prominence in the days of fast wooden sailing vessels, and also at a later date when steam power first came into use. In 1833 the *Royal William*, a Canadian ship built to ply between Quebec and Halifax,

crossed the Atlantic from Pictou to London, the first vessel to navigate the Atlantic under steam power. A few years later Samuel Cunard established the well-known steamship line of that name. His company pursued a conservative course; wooden ships were used long after iron hulls were a proven success, and paddle wheels after the introduction of the screw propeller. By 1867 the company's business had shifted to New York and its terminal was moved thither from Halifax. The Allan line had a somewhat similar early history but remained a purely Canadian company. In addition to other lines of less importance, both the C.P.R. and the Dominion Government operate fleets on the Atlantic and the Pacific oceans.

In the following tables statistics are given of sea-going vessels entered and cleared at Canadian ports during the fiscal years from 1911 to 1934 (Table **53**); of the nationalities, tonnages of freight carried, and numbers of crews of vessels entered and cleared at Canadian ports in the fiscal years ended 1933 and 1934 (Table **54**); of entrances and clearances of sea-going and all ships at principal ports (Table **59**); and of the countries whence arrived and to which departed (Tables **55** and **55A**). The numbers and particularly the tonnages of vessels entered and cleared at Canadian ports, in both ocean and coasting trade, indicate clearly the predominance of British and Canadian shipping over that of all other nations. This is particularly the case on the Atlantic coast, where the bulk of our European and South American trade is handled. The figures in Table **53** show a significant and fairly steady expansion in the total of ocean shipping through Canadian ports during the period since 1911.

53.—Sea-Going Vessels Entered and Cleared at Canadian Ports with Cargo and in Ballast, fiscal years ended Mar. 31, 1911-34.

NOTE.—For the years 1868-1910, see Canada Year Book, 1911, p. 379.

Section 2.—Inland Shipping.

Inland shipping is associated in its beginning with the birch-bark canoe of the American Indian. The advantages of this light and easily navigable boat were realized by explorers and fur traders, and for many years it was in general use, giving way to more substantial craft only with the demands of heavier traffic. The *bateau* and Durham boat came into common use after the migration of the U.E. Loyalists but soon gave place to larger vessels on the St. Lawrence and the other main highways of the time. Original plans of the Lachine canal, calling for a width of 12 feet and a depth of 18 inches, afford an illustration of the size of these primitive craft.

In the absence of any roads to make land travel possible, the St. Lawrence river and the Great Lakes formed the main highway to the interior. The route from Montreal to the Upper Lakes was broken at three places—from Montreal to Kingston transportation was by *bateau* or Durham boat, from Kingston to Queenston schooners were used, then there was the portage road from Queenston to Chippawa and, finally, schooner again to the destination. The charge for transporting a barrel of rum from Montreal to Kingston was from $3 to $3.50, and freight charges on other goods were proportions of this standard rate.

In 1809, the *Accommodation*, the first Canadian steamship, was built for the Hon. John Molson, to run between Montreal and Quebec. By 1818 Molson had formed a company, the St. Lawrence Steamship Co. or the Molson Line. On lake Ontario, the *Frontenac* was used from 1817 on a weekly service between York and Prescott and, following this beginning, came a period of great activity in lake and river shipping. In 1845, the *Gore* reached lake Huron by way of the Welland canal to carry on transport trade on the Upper Lakes, where previously there had not been enough traffic to support a large ship. Shipping on the Upper Lakes became brisker now, for there were settlers to be carried from Buffalo to the western United States and grain to be brought back. In this period Canadian shipping made its profit by carrying United States goods, for there was little traffic originating in the Canadian near-West.

Upon the advent of steam railways, water-borne traffic did not decrease but, on the contrary, increased, and at present the greater part of the western grain is shipped *via* the Great Lakes route to eastern ports. The iron ore and coal traffic between lake Superior and lake Erie ranges between 60 and 80 million short tons per annum; the total traffic on these upper lakes alone is greater than that carried by all Canadian railways and about one-twelfth of that carried by all United States railways.

Inland International Shipping.—Statistics of the inland international shipping between Canadian and United States ports for the fiscal years ended Mar. 31, 1930-34, exclusive of ferriage, are given in Table **56.** The total tonnages of inland international shipping entered and cleared in the fiscal years 1926-34 were as follows: 1926, 29,591,831; 1927, 31,181,890; 1928, 35,589,163; 1929, 39,326,700; 1930, 36,446,557; 1931, 36,311,727; 1932, 31,096,156; 1933, 26,505,653; 1934, 27,179,518.

56.—Canadian and United States Shipping on Rivers and Lakes between Canadian and United States Ports, Exclusive of Ferriage, fiscal years ended Mar. 31, 1930-34.

Section 4.—Grand Total Shipping Trade.

Statistics are given in Table 58 showing sea-going, inland international, coastwise and total vessels entered and cleared at Canadian ports, by provinces, during the fiscal years ended Mar. 31, 1933 and 1934, and totals for the fiscal years 1923 to 1934. It is noteworthy in this table that the volume of coastwise shipping is the greatest, while sea-going is next in tonnage. In the period from 1923 to 1929, both sea-going and coastwise shipping showed marked expansion, but in recent

years there has been some decline. Inland international shipping, on the other hand, has varied considerably from year to year without showing any definite trend. It is, however, significant of the importance of water-borne traffic on the inland rivers and lakes that the total tonnage of shipping entered and cleared was greater for Ontario than for any other province in the fiscal year ended 1930 and in the latest year, as in 1933, was only slightly below that of British Columbia. This was due to the fact that the great bulk of the inland international shipping was through Ontario ports, while there was also a large tonnage of coasting trade through these ports. Quebec came third in total shipping in 1934, followed by Nova Scotia and New Brunswick.

58.—Totals of Numbers and Tonnages of All Vessels Entered and Cleared at Canadian Ports, Exclusive of Ferriage, 1923-34, With Details by Provinces for the fiscal years ended Mar. 31, 1933 and 1934.

The relative volume of shipping in the leading ports of the provinces of Canada is shown in Tables **59** and **59A**. Details are given of the sea-going vessels and of the total of all shipping (exclusive of ferriage) arrived at and departed from each port. In the fiscal year ended Mar. 31, 1934, the tonnage of sea-going vessels arriving at and departing from Vancouver exceeded that of any other port in Canada; Victoria was next, followed by Halifax and Montreal. In total shipping, which included coastwise and inland international as well as sea-going shipping, Vancouver was considerably in the lead, followed by Montreal, Victoria and Halifax.

59.—Number and Tonnage of Sea-Going and of All Vessels Entered and Cleared at the Principal Ports of Canada, fiscal year ended Mar. 31, 1933.

NOTE.—For details of coastwise and inland international shipping at these ports and at all other ports of Canada, see the Shipping Report of the Department of National Revenue for the fiscal year ended Mar. 31, 1933. Figures of total shipping are exclusive of ferriage.

Section 5.—Shipping Constructed and on the Registry.

The shipbuilding industry in Canada dates from the earliest settlement of the country, and up till the 1870's was one of the leading industries of Quebec and of the Maritime Provinces, 490 vessels with a total tonnage of 183,010 being constructed in the calendar year 1874. At that time, however, the advent of the steel ship rendered the wooden vessels, the material for which was so abundant in Canada, obsolete, with the result that the tonnage built has never since reached the above figure, though in the fiscal years 1919 and 1920 the construction of the

Canadian Government Merchant Marine, built as an extraordinary measure arising out of the War, raised the totals constructed to 104,444 and 164,074 tons respectively. Statistics of ships built and registered in Canada or sold to other countries are given in Table 60. For further information on the shipbuilding industry, see Table 7 of the chapter on Manufactures, pp. 466-467.

60.—Vessels Built and Registered in Canada and Vessels Sold to Other Countries, fiscal years ended Mar. 31, 1911-34.

NOTE.—For 1874-1900, see Canada Year Book, 1911, p. 383, and for 1901-10, see 1932 Year Book, p. 597. Statistics are from the Shipping Reports of the Department of National Revenue.

[1]Revised since the publication of the 1933 Year Book.

Section 6.—The Department of Marine.*

Administration of the general shipping interests of Canada is in the hands of the Dominion Department of Marine. It deals with: (1) administration of the Canada Shipping Act and other Acts of the Dominion Government relating to marine transportation; (2) pilotage; (3) the construction and maintenance of lighthouses, lightships, fog alarms, buoys and beacons; (4) ports, harbours, piers, wharves and breakwaters; (5) the Meteorological Service of Canada; (6) relief of distressed seamen; (7) hydrographic, tidal and current surveys; (8) inquiries into the causes of shipwrecks and casualties, and the collection of wreck statistics; (9) life-saving service; (10) the inspection of steamboats; (11) the construction and maintenance of the St. Lawrence River ship channel; (12) marine signal service; (13) ice breaking and (14) the administration of Government radiotelegraph stations and the supervision of private stations in Canada. The net revenue of the Department for the fiscal year ended Mar. 31, 1934, was $1,645,291, and the expenditure for the same period was $12,208,231.

A summary statement of the revenue and expenditure of the Department of Marine is given for each fiscal year since 1901 in Table **62**, while details for the six years from 1929 to 1934 are presented in Tables **63** and **64**.

*Revised by E. Hawken, Assistant Deputy Minister, Department of Marine.

62.—Total Revenues and Expenditures of the Department of Marine, fiscal years ended June 30, 1901-06, and Mar. 31, 1907-34.

NOTE.—For fiscal years 1868 to 1900, see 1933 Year Book, p. 715.

Steamboat Inspection.—The Steamboat Inspection Service of Canada, maintained under the authority of the Department of Marine, comprises the Board of Steamboat Inspection, together with staffs of inspectors at the principal ocean and inland ports. The Board decides on the standards required of all vessels coming under its jurisdiction. These must be attained by all ships given official warrant as to their seaworthiness and mechanical condition. Further, the Board grants certificates of competency to engineers of steamboats.

Table **65** shows the numbers and tonnages of steamboats inspected, not inspected, and subject to inspection; vessels added to the Dominion Register; and vessels lost, broken up, or destroyed, by Inspection Divisions, during the fiscal years ended Mar. 31, 1933 and 1934.

Wrecks and Casualties.—The figures of Table 67, supplied by the Department of Marine, apply to vessels of every nationality in respect of wrecks and casualties in Canadian waters, and to Canadian vessels in respect of wrecks and casualties in other waters. The returns in some years cover wrecks and casualties of previous years. Statistics of marine danger signals appear in Table 68.

67.—Canadian Wrecks and Casualties, years ended June 30, 1911-17, and calendar years 1918-33.

NOTE.—For details of the years 1870-1910, see Canada Year Book, 1911, p. 381.

Section 7.—Merchant Marine Services Operated by the Canadian Government.*

The War had far-reaching effects upon the merchant shipping of the world. The losses from submarines, the demands for naval auxiliary and transport services, and the abnormally large quantities of material to be carried overseas for both war purposes and the support of the civilian populations of Europe, all combined to create pressing demands for merchant shipping. In the latter part of the War, when submarine operations were intensified, the supply of merchant tonnage became a source of serious anxiety to the Allies and every effort was made not only to economise the shipping then afloat but to increase the supply by new building. It was under these circumstances that the Dominion Government placed orders with Canadian shipbuilding firms for the construction of 63 steel cargo vessels of six different types. These vessels were intended primarily to co-operate with British shipping in supplying the necessities of war, but, though the War ended before the ships were all built, the construction program was continued to provide employment and, in view of the losses of the War, to assure sufficient shipping as a complement to the National Railways and as a means of carrying abroad the products of Canada's farms, forests, mines and factories.

Shipping construction at that time was very costly and this abnormally high first cost has been a serious handicap to the economical operation of the ships ever since. Prior to Dec. 31, 1919, 19 vessels had been delivered by the builders. Additions were subsequently made to the fleet until the total fleet, as at Dec. 31, 1924, numbered 57 vessels of a total deadweight tonnage of 353,450. Through sale and the loss of three vessels the fleet was reduced to 29 vessels with a deadweight tonnage of 96,987 at Dec. 31, 1933. Early operations proved profitable: a surplus of $1,056,767 was shown for the year ended Dec. 31, 1919 and a surplus of $1,263,307 for the year ended Dec. 31, 1920 (without provision for interest

*Revised under the direction of Geo. W. Yates, Assistant Deputy Minister, Department of Railways and Canals, by A. H. Allan, General Manager, Canadian National Steamships, Montreal.

charges). Operating income results from the date of the inception of these services have been as follows, exclusive of interest and depreciation on the original high cost of the vessels. Operating deficits are indicated by a minus sign:—

Calendar Year.	Operating Results.	Calendar Year.	Operating Results.
	$		$
1919	1,056,767	1927	−720,735
1920	1,263,307	1928	−1,209,083
1921	−2,325,906	1929	−878,907

1924	−1,450,887	1932	−326,613
1925	−926,844	1933	−17,938
1926	−90,159		

In conformity with the Canada-West Indies Trade Agreement Act of 1926 (16-17 Geo. V, c. 16), the Dominion Government has provided direct steamship services to the West Indies through the medium of Canadian National (West Indies) Steamships, Ltd. The service is provided by a fleet of eleven vessels of a total deadweight tonnage of 63,426. Five of these boats, known as the "Lady" ships, were specially constructed for passenger service on this route, while the remaining seven vessels previously formed part of the Canadian Government Merchant Marine fleet, and were taken over by the Canadian National (West Indies) Steamships, Ltd., for operating purposes, under entrusting agreements with the respective companies which owned the ships. The investment in vessels at Dec. 31, 1933, amounted to $10,665,567, mainly made up of the construction cost of the "Lady" ships and the present-day valuation of the other seven ships, together with the cost of conversion for use in the West Indies service of three of the latter. The financial results of the operations of the Canadian National (West Indies) Steamships, Ltd., have been as follows:—

Calendar Year.	Operating Revenues.	Operating Expenses.	Net Operating Loss.	Depreciation.	Interest.	Book Loss.

PART X.—TELEGRAPHS.*

The Toronto, Hamilton and Niagara Electro-Magnetic Telegraph Co., organized by a group of Toronto men, was the first to establish an electric telegraph service in the pre-Confederation Province of Canada. It was formally organized on Oct. 22, 1846, and its Toronto-Hamilton line was opened on Dec. 19 of the same year. In January, 1847, the line was completed to Queenston, whence there was a connecting line to Buffalo. The Montreal Telegraph Co. commenced the construction of a line to Toronto in February, 1847, and began actual operation between the two cities on Aug. 3 of the same year. By the end of the year it had 540 miles of wire in use, 9 offices and 35 employees, and had sent out 33,000 messages. Both the Montreal and the Toronto companies were incorporated by special Acts at the 1847 session of the Legislature. In 1852 the Toronto, Hamilton and Niagara Co. sold out to the Montreal company.

The British North American Electrical Association was also formed in 1847, with the object of connecting Quebec with the Maritime Provinces, but for some years its line went no further than Rivière du Loup, though it was finally extended to Woodstock, N.B., where it connected with the American Telegraph Co., which already had lines in New Brunswick. The New Brunswick Telegraph Co. built a line connecting Saint John with the Maine Lines in 1848, and in the following year extended it to Amherst, N.S., where it connected with the Nova Scotia line, bringing Halifax for the first time into telegraphic communication with New York.

The movement for consolidation of services, so evident in the Canadian railways, was also active among the telegraph companies. Thus the Montreal company bought out the Toronto, Hamilton and Niagara Telegraph Co., the Montreal and Bytown Telegraph Co. and the Grand Trunk Telegraph Co., and maintained a strenuous competition with the Dominion Telegraph Co., organized in 1868. In 1881, however, the conflicting interests were consolidated under lease by the Great North Western Telegraph Co., this move effecting great economies in operation. A few years later, however, the Canadian Pacific Railway Co. established competing lines and by September, 1886, had opened 366 offices in Ontario, Quebec and Western Canada.

Dominion Government Telegraph Service.—This service is operated by the Telegraph Branch of the Department of Public Works. Its general object has been to furnish rapid communication for outlying and sparsely settled districts where the amount of business is so small that commercial companies will not enter the field but where the public interests require that there should be communication. Thus these facilities include: telegraph and telephone services to scattered settlements around the coasts of Cape Breton island; cable services to Campobello, Grand Manan and other islands in the bay of Fundy, to Prince Edward Island, Magdalen islands and Anticosti island in the gulf of St. Lawrence; telegraph or telephone services along the north shore of the gulf of St. Lawrence from Quebec to the straits of Belle Isle; cable connections with Pelee and Manitoulin islands in Ontario; some lines to northern outlying districts in Saskatchewan; lines from Edmonton to the Athabasca and Peace River country in Alberta; telegraph or telephone communications around the coast of Vancouver island and to fishing, lumbering and mining settlements along the coast of the mainland of British Columbia, as well as to isolated

*Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics, which issues an annual report dealing with telegraph statistics.

mining centres in the interior; and finally the overland telegraph line to Dawson and other settlements in Yukon. All these services, on Mar. 31, 1934, comprised 8,864 miles of pole line, 10,782 miles of wire, 326 knots of cable and 705 offices, with 422 salaried employees engaged in operation and maintenance, as well as 242 other persons operating offices on a commission basis. The lines in operation amounted to 3,797 miles of pole line in British Columbia and an additional 535 miles in Yukon, 1,671 miles in Quebec, 1,442 in Alberta and 877 miles in Nova Scotia, as well as smaller mileages in New Brunswick, Ontario and Saskatchewan.

Telegraph Systems.—The Canadian telegraph systems are composed of lines owned by the Dominion Government and by chartered railway and telegraph companies. The lines previously owned by the Great North Western Telegraph Co., the Grand Trunk Pacific Telegraph Co., the Canadian Northern Railway Co and the National Transcontinental Railway are now owned by the Government and are operated by the Canadian National Telegraph Co. (formerly Great North Western Telegraph Co.). The Dominion Government Telegraph Service operates the line to Yukon and other lines in outlying districts.

The Canadian system, in proportion to population, is one of the most extensive in the world, and is operated under considerable climatic and geographic disadvantages. In the operation of railways and in the receipt and dispatch of market and press reports, its services to the nation are invaluable.

Telegraph Statistics.—A brief summary table giving the more important figures of the operation of Canadian telegraphs from 1920 to 1933 follows. For details see the Annual Report on Telegraph Statistics published by the Bureau of Statistics.

69.—Summary Statistics of All Canadian Telegraphs, calendar years 1920-33.

Year.	Gross Revenue.	Operating Expenses.	Net Operating Revenue.	Pole Line Mileage.	Wire Mileage.	Employees.	Offices.	Messages, Land.	Cablegrams.[3]	Money Transferred.

[1]Cablegrams not included. The total in Table **69** includes messages handled by the Marconi Wireless Telegraph Co. [2]Not including press messages. [3]The total in Table **69** includes offices of wireless and cable companies. [4]Included with Canadian National.

Submarine Cables.—Six transoceanic cables have termini in Canada—five of them on the Atlantic coast and one on the Pacific. The year in which the cable was first demonstrated to be of commercial value was 1866, and up to the present its use has greatly increased. The Atlantic cables are controlled by English and United States' interests. The Pacific cable, from Canada to Australia and New Zealand, has been in operation since 1902, and was owned by a partnership of the Governments of Great Britain, New Zealand, Australia and Canada. As a result of the recommendation of the Imperial Wireless and Cable Conference of 1928, in view of increased wireless competition, it was decided to dispose of the Pacific and West Indian Islands cable systems to the Imperial and International Communication Co., a company formed to take over all Empire-owned cables and lease the Empire-owned beam wireless systems. The necessary legislation was passed by the United Kingdom in February, 1929, and by Canada in June, 1929.

PART XI.—TELEPHONES.*

The telephone is in part a Canadian invention, though its inventor, Alexander Graham Bell, a Scotsman by birth, was at the time of its invention a resident of the United States, having immigrated with his father to Brantford, Ontario, in 1870, and subsequently proceeded to Boston. According to his account, the discovery of the telephone, both as to its main principle and as to the first transmission of the human voice, was made at his father's residence at Tutela Heights, Brantford, in 1876, and the first telephone talk over any distance was conducted between Brantford and Paris, a distance of 8 miles, on Aug. 10, 1876.

Telephone development in Canada dates from the year 1880, when the Bell Telephone Co. was incorporated by Act of Parliament. Although at this time all patents and lines were owned by the Canadian Telephone Co., this was dependent on the Bell Co., to which it sold out in 1882. By 1883 the first submarine telephone cable had been laid between Windsor and Detroit, and during the year the Bell Co. operated in Canada 4,400 rental-earning telephones, 44 exchanges and 40 agencies, with 600 miles of long-distance wire. It controlled development in all the provinces except British Columbia, where the greater part of the system has always been in the hands of the British Columbia Telephone Co., Ltd.

With the rapid growth of private companies in the Maritime Provinces, the lines of the Bell Co. were disposed of in 1888 to the Maritime Telegraph and Telephone Co. in Nova Scotia, and to the New Brunswick Telephone Co. in New Brunswick, an interest in these corporations being retained under the terms of sale. A development of a different kind is seen in the three Prairie Provinces, where well-organized systems were sold to the Governments of Manitoba and Alberta in 1908 and to Saskatchewan in 1909. The lines in Ontario and Quebec are still largely owned by the Bell Telephone Co.

Telephone Systems.—The 2,403 telephone systems existing in 1933 (Table **72**) include the three large provincial systems in Manitoba, Saskatchewan and Alberta, and a smaller governmental system in Ontario, together with the system operated by the National Parks of Canada, Department of the Interior. There were also 142 municipal systems, the largest operated by the cities of Edmonton, Fort William and Port Arthur. Out of the 1,503 co-operative telephone companies, no fewer than 1,169 were in Saskatchewan alone and 211 in Nova Scotia. Besides the above, there were 539 stock companies, 95 partnerships and 117 systems privately operated.

A summary of the principal statistics is contained in Table **71.** Up to 1930 there had been a steady growth in the use of telephones, the number reaching a peak at 1,402,861, but in 1931, 1932 and 1933 decreases of 2·7 per cent, 7·5 per cent and 5·5 per cent, respectively, were recorded. The number of telephones per capita is, however, second only to that of the United States, the numbers being 13·94 telephones per 100 population in the United States and 11·16 in Canada. By provinces the numbers of telephones were in 1933: Ontario 543,907, Quebec 259,530, British Columbia 116,528, Saskatchewan 74,258, Manitoba 61,874, Alberta 57,429, Nova Scotia 43,556, New Brunswick 29,750, Prince Edward Island 5,348, and Yukon 150. The numbers of instruments per 100 population were as follows: British Columbia 16·4, Ontario 15·4, Quebec 8·7, Manitoba 8·6, Nova Scotia 8·3, Saskatchewan 7·8, Alberta 7·6, New Brunswick 7·1, Prince Edward Island 6·0 and Yukon 3·8.

*Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics, which issues an annual report dealing with telephone statistics.

Estimates of the numbers of telephone conversations during 1933 were 2,247,-144,000 local and 24,437,452 long-distance calls. Systems operating almost 90 p.c. of all telephones in Canada made estimates by actual count on days of normal business, and, after adjusting for uncompleted calls, holidays, Sundays, etc., the average was multiplied by 365. The long-distance calls in practically all cases were the actual long-distance calls put through or completed. The averages were 1,885 local and 21 long-distance calls per telephone and 213 telephone conversations per capita as compared with 223 in 1932. The estimated per capita average for the United States in 1932 was 205 and for New Zealand, 206.

Statistics of the number of telephone companies reporting to the Dominion Bureau of Statistics are given in Tables **72** and **73.**

71.—Summary Financial Statistics of Telephones in Canada, years ended June 30, 1911-18, and Dec. 31, 1919-33.

PART XII.—RADIO.*

Under the Radiotelegraph Act (c. 195, R.S.C., 1927), the administration of radio within the Dominion was vested in the Department of Marine. Dominion jurisdiction has been questioned by certain of the provinces from time to time, but on Feb. 9, 1932, the Judicial Committee of the Imperial Privy Council ruled that the control and regulation of radio communication is within the jurisdiction of the Dominion Parliament. This decision was a very important one and has done much to further the nationalization of radio broadcasting in Canada. (See pp. 788-789.)

Section 1.—Radiotelegraphy.

The Coast Station Radiotelegraph System.—The present coast station system of 69 stations consists of three chains—one extending from Vancouver to Prince Rupert on the Pacific, another from Port Arthur to the Atlantic ocean in the east, and the third from Port Churchill to Resolution island at the entrance to Hudson strait. The Great Lakes coast stations connect with those of the east coast, which, in turn, connect with the Hudson Bay Route chain. There is no direct radio connection between the Great Lakes and the Pacific Coast chain.

Of the above stations, 17 on the east coast and Great Lakes are operated by the Canadian Marconi Co. under contract with the Department, and the remaining 52 on the east coast, west coast and Hudson bay and strait are operated directly by the Department. Twice daily, at advertised hours, a number of these stations broadcast messages to shipping containing such important information as weather forecasts, storm warnings, reports in connection with floating derelicts, ice and other dangers to navigation. In the interests of navigators, to whom accurate time is essential in computing observations on celestial bodies, three Canadian coast stations—two on the west coast and one on the east coast—transmit time signals at advertised hours daily.

* Sections 1 and 2 have been revised by Commander C. P. Edwards, O.B.E., Director, Radio Service, Department of Marine, Ottawa. A fuller treatment of the historical and descriptive background of radio communication was published at pp. 607-610 of the 1932 Year Book.

Some years ago the discrimination of underwriters in the matter of insurance rates charged on ships plying to Canadian ports led the Department to feel that any reasonable expenditure which would tend to reduce these charges would be a sound investment. To this end 13 direction-finding stations have been established at specially selected sites with respect to navigational routes—7 on the east coast, 5 on Hudson bay and strait, and 1 on the west coast. These stations are fitted with special apparatus which enables the direction of the incoming radio signal transmitted by a ship to be accurately determined.

A more recent extension of the shore direction finder is the development of the direction-finding instrument on board ship. To assist this development, the Department has established radio beacon transmitters at a number of lighthouses and lightships (see Table 76). These radio beacons transmit characteristic radio signals with an approximate range of 50 miles every hour at advertised times during clear weather and continuously when the atmosphere in the vicinity of the station is so obscure as to impede navigation.

To insure the safety of life at sea, all passenger steamers and freighters plying to and from Canadian ports must carry radio equipment manned by competent operators in possession of a certificate of proficiency in radio. The Department maintains a complete radio inspection service to enforce this regulation. Inspectors located at various ports throughout the Dominion are responsible for checking the efficiency of the radio equipment on ships of all nationalities, and seeing that only competent operators are carried. Examinations for certificates of proficiency in radio are conducted by the Radio Branch, and 4,758 certificates had been issued up to Mar. 31, 1934.

Table 76 shows the name and situation of the Government-owned radiotelegraph stations in Canada and Newfoundland.

Section 2.—Radiotelephony.

Transatlantic Radiotelephone Service.—A radiotelephone service between Canada and Great Britain was first made available to the Canadian public, through the medium of the Bell Telephone Co. *via* the transatlantic radio circuit operated by the American Telegraph and Telephone Co. from New York, in March, 1928. In 1932 a direct circuit with Great Britain was opened through the medium of the beam station of the Canadian Marconi Company at Drummondville, P.Q.

Radio Broadcasting.—Broadcasting of the human voice by radio first commenced in Canada with test programs carried out by the Canadian Marconi Company in Montreal during the winter evenings of 1919. Regular organized programs were commenced in December, 1920, by the same company, on a wavelength of 1,200 metres.

In April, 1922, the establishment of broadcasting stations on a general scale commenced, 52 private, commercial and amateur broadcasting licences being granted during the fiscal year 1922-23. During the fiscal year 1933-34, 74 broadcasting stations were in operation in the Dominion, and the number of licensed receiving sets was 707,625. The licence fee for a broadcasting station is $25 for a period of 6 months, and for a receiving set $2 per annum.

Approximately $250,000 is expended annually by the Radio Branch of the Department of Marine for the suppression of inductive interference in the interests of broadcast listeners. This service is entirely free. Upwards of 100 men and 24 fully equipped cars are engaged in this work.

The extent to which private receiving sets are used for the reception of Public Broadcasting is indicated by the number of private receiving licences issued in the various provinces of the Dominion during the fiscal year 1933-34 as follows:—Alberta, 40,455; British Columbia, 55,978; Manitoba, 44,420; New Brunswick, 17,206; Nova Scotia, 25,039; Ontario, 288,357; Prince Edward Island, 1,758; Quebec, 201,154; Saskatchewan, 32,951; Yukon and Northwest Territories, 307.

[1] Includes licences issued free to the blind, numbering 1,517 in 1934.

Section 3.—The Canadian Radio Broadcasting Commission.*

From the time its original networks were established, about the middle of 1933 until the present, the Canadian Radio Broadcasting Commission has maintained a daily broadcasting service on regular schedule to all the populated areas of Canada. Its time on the air in regular schedule broadcasting has amounted to approximately 40 hours a week, being 4½ hours on week days and about 9 hours on Sundays, with additional hours on Saturdays during certain periods. On week days the broadcasting has been in the evening hours when the maximum number of listeners can be served. The Sunday schedule includes also several hours in the afternoon. The service is provided on a system of broadcast networks organized as follows:—

Maritime network serving Nova Scotia, Prince Edward Island and New Brunswick;
Mideast network serving Ontario and Quebec;
Central network serving Manitoba and Saskatchewan;
Pacific network serving Alberta and British Columbia;
Midwest network serving Manitoba, Saskatchewan and Alberta;
Eastern network which includes the Maritimes and Mideast networks;
Western network which includes the Central, Midwest and Pacific networks;
National network which includes all the above and thus serves all points in Canada.

By the end of 1934 commission networks included upwards of 50 broadcasting stations covering the country from Sydney, N.S., to Vancouver, B.C. Of these stations 23 were 'basic' stations which, either through being operated by the commission itself or through contract arrangement with it, reserved specified time each day for commission broadcasting. The others were stations to which the commission service was made available but their use of it was entirely optional. The network stations are connected by approximately 12,000 miles of communication wires or about 5,900 miles of broadcast wire pairs. For the operation of this wire communication system, a telegraphic monitor circuit involving an additional 5,900 miles of wire and 64 repeater and control stations is used. The wire network was supplied jointly by the Canadian Pacific Telegraphs and Canadian National Telegraphs under contract arrangement with the commission. Of the network stations six are operated by the commission itself.

The national broadcasting service follows usual broadcasting practices with respect to the types and variety of entertainment provided. The daily broadcasting, however, contains no advertising, direct or indirect, and all Canadian cities are represented in the broadcasting. The regular service consists, broadly speaking, of: entertainment, mainly musical; informative and educational broadcasts; news bulletins and weather forecasts; and special features. Such a classification, however, is very general. An accurate classification would be difficult as a number of the regular features of the service fall under two or more headings. Many of the musical programs, for example, are directly educational and informative in that they include biographical sketches of the lives and works of the great composers. Musical programs include opera, chamber music, choral concerts, instrumental recitals, bands and orchestras of all kinds. In its musical programs particularly the commission seeks to serve all tastes. During the winter season of 1933-34 a series of weekly broadcasts by the Metropolitan Opera Co. of New York was carried

*Supplied by Hector Charlesworth, Chairman, Radio Broadcasting Commission.

on the commission networks. In the commission's own studios light operas were produced by its own groups of artists. The commission also secured, and broadcasted from coast to coast, the Sunday afternoon series of concerts by the New York Philharmonic Society as well as other symphony concerts by well known organizations in Canada and the United States. Leading Canadian concert orchestras, dance orchestras, bands and choral groups have been heard frequently in the national service. Other entertainment programs include what might be called variety revues, humour, programs for children. There is a fifteen-minute news bulletin period every evening followed by weather bulletins and the broadcasting of "A Fact A Day About Canada" supplied by the Dominion Bureau of Statistics. During the fall and winter season the commission maintains a weekly service by short wave to the outposts in the Far North. This service includes a weekly summary of the news, a special entertainment program, and personal messages. In response to public request this northern messenger service is also carried on the national network.

The part of the service which falls under the head of informative and educational broadcasts includes addresses by outstanding Canadians and visitors from other lands, short talks by officials of the Government services, university lectures and debates, commentaries on world events and book reviews. As in other countries drama is finding a steadily increasing place on the air in this country and the commission broadcasts a number of plays written especially for the microphone by Canadians.

In addition to the regular schedule broadcasting, the commission broadcasts events of special interest taking place in Canada and other countries. During the past year for example it broadcasted the launching of the new ocean liner, the *Queen Mary*, the Jacques Cartier quater-centennial celebrations at Gaspé and elsewhere, the wedding of the Duke of Kent and Princess Marina of Greece, and other events in which there was general interest. The commission participated in the Empire Christmas broadcasts of 1933 and 1934. Broadcasts in behalf of international peace, community relief and child welfare and other causes were carried on the commission networks.

During 1934 a new broadcasting station at Quebec was added to the chain of stations operated by the commission and another station for this chain was nearing completion at Windsor, Ontario. A receiving station was constructed at Ottawa with special equipment for the reception of short wave programs from the United Kingdom. This station was ready for operation in the summer of 1935 and the commission proposes to pick up selected programs from the United Kingdom and re-broadcast them over its networks by means of its blattnerphone recording equipment. Programs are regularly exchanged between the commission and the large broadcasting companies of the United States.

As required by the Canadian Radio Broadcasting Act the commission continued to control and regulate all broadcasting in Canada.

PART XIII.—THE POST OFFICE.

Historical.—A postal service was established between Montreal and Quebec as early as 1721, official messengers and other travellers making a practice of carrying letters for private persons. When Canada came under British rule, the Post Office was placed on a solid footing by Benjamin Franklin, then Deputy Postmaster General for the American colonies, who visited Canada in 1763, opened post offices at Quebec, Montreal and Three Rivers, and also established courier

communication between Montreal and New York. Since 1755 Halifax had had a post office and direct postal communication with Great Britain.

As a consequence of the American Revolution and the resulting isolation of Canada from Nova Scotia, the first exclusively Canadian postal service, a monthly courier route from Halifax to Quebec, was established in 1788, involving a seven weeks trip and expenses of about £200 of which only one-third was met by postal charges. Up to 1804 the postal facilities of Upper Canada consisted of one regular trip by courier each winter with whatever mail might reach Montreal during the season of navigation. Charges were necessarily high, $1.12 being paid on ordinary letters from London to York (now Toronto) *via* Halifax.

The first post office in York (now Toronto) was opened about 1800. By 1816 there were 19 offices in the two Canadas and by 1827 this number had increased to 114. At this time the system consisted primarily of a trunk line of communication between Halifax, Quebec, Montreal, York and Amherstburg, over which couriers travelled at varying intervals. Branching off this line were routes to Sorel, Sherbrooke, St. Johns, Hull, Hawkesbury, Perth and Richmond, with most deliveries made once or twice a week.

Hitherto the Post Office had been under the control of the Imperial Department, but considerable agitation resulted in the service being transferred on April 6, 1851, to the several provinces. Only enough mutual control was maintained to insure the continuance of Imperial and intercolonial services. The provinces had complete jurisdiction over the establishment and maintenance of systems and rates.

At Confederation the provincial systems were transferred to the Dominion. The Post Office Act of 1867 established a service throughout Canada. The domestic rate on letters was reduced from 5 to 3 cents per half-ounce, and in 1870 the rates to the United States and the United Kingdom were reduced from 10 to 6 cents and from 12½ to 6 cents, respectively, per half-ounce. In 1875 a convention between Canada and the United States reduced postal rates between the countries to the domestic level. In 1878, on the admission of Canada to the Postal Union, letter postage to the countries of the Postal Union was reduced to 5 cents per half-ounce. After a conference in 1897 Imperial penny postage (2 cents per half-ounce) was established on Dec. 25, 1898, while the domestic rate was reduced from 3 to 2 cents per ounce. These rates were maintained until 1915, when a 1-cent war tax was imposed on all pay letters and post cards (except where this would be in violation of international agreements), and also on postal notes. Later the rate to the United Kingdom was increased to 4 cents on the first and 3 cents on succeeding ounces, while that to Postal Union countries was raised to 10 cents on the first and 5 cents on succeeding ounces. The Postal Union rate was reduced in October, 1925, to 8 cents for the first ounce and 4 cents for subsequent ounces. Penny postage again became effective for Canada, to the United States, Newfoundland and other countries of North America on July 1, 1926, and to the United Kingdom and all other places within the British Empire on Dec. 25, 1928. On May 24, 1929, penny postage became effective to France and, on Dec. 25, 1929, was extended to all places in South America. On July 1, 1930, the rate to other Postal Union countries was made 5 cents for the first ounce and 3 cents for each succeeding ounce. On July 1, 1931, a special revenue tax, imposed by the Government for the purpose of obtaining additional revenue, came into effect on letters addressed to places in Canada, throughout the Empire, to France and to North and South America

generally, making the rate in these cases 3 cents for the first ounce and 2 cents for each succeeding ounce.

The Post Office Department is administered by the Postmaster General. Besides the several administrative branches at Ottawa, the Dominion is divided into 15 districts, each in charge of a Superintendent of Postal Service. The Canadian system embraces a territory more extensive than that served by any other system, excepting those of United States and Russia, and the sparsity of population and the comparative lack of development make inevitable a peculiarly difficult and expensive service.

Rural Mail Delivery.—A system of rural mail delivery was inaugurated in Canada on Oct. 10, 1908, limited at that time to existing stage routes, persons residing on such routes being entitled to have mail boxes put up in which the mail carrier was to deposit mail matter and from which he was to collect mail matter and carry it to the post office. As a consequence of the public approval of this scheme, new regulations, taking effect on April 1, 1912, made all persons residing in rural districts along and contiguous to well-defined main thoroughfares of one mile and upwards eligible to receive their mail in this manner, while couriers on rural mail routes were also required to sell postage stamps and take applications, and accept money, for money orders and postal notes. The result has been an increase in the number of rural routes from approximately 900 in 1912 to 4,329 in 1933, having 236,380 mail boxes as against approximately 25,000 in 1912. The establishment of these routes has been an important factor in the amelioration of the conditions of Canadian rural life.

Statistics.*—Tables **79** to **81** show the numbers of post offices in operation in Canada in the latest six years, the gross revenue in each office collecting $10,000 and upwards in 1933 and 1934, and the net revenues and expenditures of the Department in various years since 1890.

*Revised as to financial transactions by H. E. Atwater, Financial Superintendent, Post Office Department.

[1] "Net Revenue" is exclusive of salaries and allowances to postmasters and some other smaller items. The gross revenue in the fiscal year 1933 was $36,891,968 and in 1934, $36,352,253.

Auxiliary Services.—The auxiliary postal services—the issuing of money orders (including postal notes) and the facilities offered by the Post Office savings banks—have expanded enormously since Confederation. In 1868, there were 515 money order offices in operation, issuing orders to an amount of $3,342,574. In 1934 the number of offices had increased to 6,464. In the following tables, illustrating the use of money orders and postal notes, it will also be noticed that the large number of 12,633,710 money orders, representing a value of $107,471,321, was issued during 1934. The number of postal notes received and paid was 5,115,761, with a value of $9,247,459. Statistical tables showing deposits with the Government savings banks since Confederation and the business of the Post Office savings banks, 1929-34, are included in the chapter on Currency and Banking, (Chapter XXII).

82.—Operations of the Money Order System in Canada, fiscal years ended Mar. 31, 1911-34.

NOTE.—For 1868 to 1910, see Canada Year Book, 1911, p. 289. For 1901-10, see 1932 Year Book, p. 622.

Postal Notes—					
Total notes received and paid.....No.	8,466,055	8,145,855	7,227,262	5,963,810	5,115,761
Total value, including postage and postal note stamps affixed..... $	15,578,489	14,681,376	12,629,304	10,530,490	9,247,459

Postage Stamps.—The value of the postage stamps, post cards, etc., sold during each of the latest seven fiscal years, was: $26,200,776 in 1928, $26,475,541 in 1929, $27,101,353 in 1930, $25,769,781 in 1931, $27,242,715 in 1932, $25,999,159

in 1933 and $25,541,129 in 1934. Receipts from postage paid in cash were as follows: $7,467,611 in 1928, $8,410,255 in 1929, $9,045,805 in 1930, $8,887,322 in 1931, $9,078,136 in 1932, $8,173,950 in 1933 and $8,129,387 in 1934.

Air-Mail Services.—The total poundage of mail carried by air throughout Canada during the year ended Mar. 31, 1934 was 592,758 lb., an increase of 30 p.c. over the previous year, while the mileage flown showed an increase of approximately 10 p.c.

An interesting feature of the returns is the volume of mail carried by air into the several mining districts, and there would seem to be little doubt that aerial postal communication contributes materially to the development of Canada's natural resources.

Subsidies, etc.—The conveyance of mail by land, water and air entailed a total expenditure of $13,140,593 during the fiscal year ended 1934. Land transportation (largely that by rural delivery) cost $6,097,562, railway carriage cost $6,557,541, conveyance by steamship cost $270,600, while that by air cost $214,890. These amounts were paid solely for services rendered as carriers. In addition, however, considerable mail is carried, on both the Atlantic and Pacific coasts, by steamships and steamship lines which are especially subsidized by the Government. Table **85**, showing amounts so paid in 1932, 1933 and 1934, follows.

85.—Mail Subsidies and Steamship Subventions, fiscal years ended Mar. 31, 1932-34.

NOTE.—The figures in the following table were supplied by F. E. Bawden, Esq., Director of Steamship Subsidies, Department of Trade and Commerce. They appear annually in the Annual Report of the Auditor General and represent the amounts paid in connection with contracts made under statutory authority by the Department of Trade and Commerce for trade services, including the conveyance of mails.

CHAPTER XIX.—LABOUR AND WAGES.*

PART 1.—LABOUR.

Section 1.—Occupations of the People.

The occupations of the people of a country are, at any given time, mainly determined by its natural resources and the stage which has been reached in their development. The outstanding characteristics of Canada are its enormous extent, its immense natural resources and the comparatively slight development of these, only the resources of the southern portions being as yet at all well-known. The developed areas fall into four economic units with quite distinct physical characteristics: first, the Maritime Provinces, where lands, forests, mines and fisheries are the chief natural resources; secondly, Ontario and Quebec, with lands, forests, mines and abundant water power for manufacturing purposes; thirdly, the Prairie Provinces, where the land is the chief natural resource, except in Alberta which contains immense coal deposits; lastly, British Columbia, with fisheries, forests and mines, where agriculture plays a comparatively minor part. When the country as a whole is considered, the immense fertile areas of arable land must be considered as its chief natural resource, but in different parts of its vast expanse other resources predominate and give the key to the chief occupations of the people.

In Canada, as in other new countries, the labouring population (using the term in its widest sense) bears a larger proportion to the total than is the case in older civilizations where there exists more realized wealth. In addition to our native-born workers, great numbers of young males and smaller numbers of females, who have nothing to sell but their personal services, have, in the past, immigrated from older countries to Canada to find here a better market for their labour. Thus both the sex distribution and the age distribution of the population of Canada is rendered somewhat abnormal, an unusually large percentage of that population being of working age and of the male sex—that is, of the sex which is most generally gainfully employed.†

A gainful occupation for census purposes is an occupation by which the person who pursues it earns money or money equivalent, or in which he assists in the production of marketable goods. Children working at home or women doing housework in their own homes without wages, and having no other employment, were not included among the gainfully employed. A person who happened to be idle or unemployed at the date of the census was enumerated as of the occupation usually followed when employed, or of the occupation in which last regularly employed.

The gainfully occupied, as defined above, recorded in the Census of 1931 are presented in the tables which follow under two different classifications, *i.e.*, by occupations in Table **1** and by industries in Table **2.** The differences in these classifications are explained in the introductions to the tables.

The Labour Force of Canada in 1931.—In 1931, out of a total population 10 years of age and over in the nine provinces of 8,159,059 over (including 3,668 of unstated ages), 3,927,591 or 48·1 p.c. were gainfully occupied, as compared with 3,173,169 or 47·5 p.c. in 1921, 2,723,634 or 49·4 p.c. in 1911, 43·9 p.c. in 1901 and 44·5 p.c. in 1891.

* The sections and subsections of this chapter, with the exceptions of Sections 1, 3, 7 and Section 9, Subsections 3 and 5, all of Part I and Section 4 of Part II, have been revised by, or under the direction of, W. M. Dickson, Deputy Minister, Department of Labour, Ottawa. The information in Section 3, Part I, has been obtained through the courtesy of the Provincial Departments of Labour or Bureaus of Labour, and that in Section 7, Part I. has been revised by the chairmen of the respective provincial Workmen's Compensation Boards. The remaining sections have been prepared in the Dominion Bureau of Statistics.

† On the sex distribution of the population, see pp. 111-113; on the age distribution, see pp. 117-120.

Male Labour in 1931.—Of the male population in the nine provinces 10 years of age and over in 1931 (4,252,537) 3,261,570 or 76·6 p.c. were gainfully occupied, as compared with 2,683,019 or 77·5 p.c. in 1921, 2,358,813 or 79·5 p.c. in 1911, 74·2 p.c. in 1901 and 76·6 p.c. in 1891. Thus the latest census shows a decrease in the proportion of males gainfully occupied, a decrease probably due partly to a later age at school leaving, partly to a change in the age distribution of the male population 10 years of age and over, a larger percentage of the total being at relatively advanced ages, and a smaller percentage in the younger groups. For example, 5·5 p.c. of the males of Canada were over 65 years of age in 1931 as compared with 4·7 p.c. in 1921.

Female Labour in 1931.—Of the female population of 10 years and over in the nine provinces, numbering altogether 3,906,522 in 1931, 666,021 or 17·1 p.c. were then gainfully occupied, as compared with 490,150 or 15·3 p.c. in 1921, 364,821 or 14·3 p.c. in 1911, 12·0 p.c. in 1901 and 11·1 p.c. in 1891. Thus the tendency for women to go increasingly into gainful occupations, which has been noticeable since 1891, continues.

Occupational Classification.—The classification of occupations was based upon the principle of the material worked on, the process performed and type of service rendered, while degree of skill was also taken into account. The detailed classification, which is given in full detail by provinces in Bulletin XXXI, Census of 1931, provides readily for a combination of occupations into more comprehensive occupational groups.

It was considered to be more useful to group all the building trades together under Construction rather than to assign some to other groups. For example, the occupation "carpenters" might have been included under Wood Products and "plumbers, gasfitters, steamfitters" under Metal Products. The arrangement endeavours to provide as convenient a grouping of occupations as possible without seriously departing from the principle of assigning certain occupations to specific groups. Clerical occupations which can hardly be included under one occupational division more than another are shown in a separate group. The occupation "labourer" is not included in any of the groups except the primary ones—"agricultural", "mining", and "logging". In the "logging" group the labourers have been included in "lumbermen". "Labourers" in all but the primary industries were classified in a residuary occupation "labourers and unskilled workers (not agricultural, mining or logging)". No attempt was made to classify them occupationally because it was felt that the labourer in an automobile factory, for example, is not necessarily following a metal-working occupation or a labourer in a store, a commercial one.

1.—Persons, Ten Years of Age and Over, Engaged in Gainful Occupations in Canada, by Sex and Occupation, 1931.

Occupation.	Male.	Female.	Total.
Agricultural[1]	**1,107,669**	**24,202**	**1,131,871**
Farmers, stock-raisers, gardeners, etc.	624,988	19,184	644,172

Professional[1]	122,725	118,060	240,785
Clergymen, nuns, brothers, religious workers	15,478	9,518	24,996
Lawyers, justices, magistrates	8,539	65	8,604
Doctors, dentists, opticians, osteopaths, etc.	15,123	346	15,469
Nurses, graduate and in training	–	31,903	31,903
Professors, teachers (incl. physical training)	21,940	65,199	87,139
Engineering professions (civil, mining, chemical, architects, draughtsmen, etc.)	24,925	227	25,152
Accountants, auditors	18,948	830	19,778
Entertainment and sport	7,455	626	8,081
Personal service[1]	114,669	219,894	334,563
Restaurant, hotel, boarding house keepers	16,794	20,693	37,487
Matrons, stewards, waiters, waitresses	12,299	38,677	50,976
Janitors, watchmen, caretakers	28,115	1,062	29,177
Barbers, hairdressers, manicurists and apprentices	16,369	6,743	23,112
Cooks	17,942	7,815	25,757
Domestic servants, n.e.s.	8,541	133,966	142,507
Laundering, cleaning, dyeing, pressing	13,615	8,978	22,593
Clerical (Stenographers, Bookkeepers, Officer Clerks)	**122,220**	**116,663**	**238,883**
Labourers (not Agricultural, Mining or Logging)	**425,304**	**11,728**	**437,032**
Unspecified	**1,379**	**301**	**1,680**
Totals, All Occupations	**3,261,570**	**666,021**	**3,927,591**
Employers	**387,702**	**18,956**	**406,658**
Own account	**549,633**	**54,824**	**604,457**
Wage and salary earners	**2,022,461**	**547,996**	**2,570,457**
No pay[2]	**301,774**	**44,245**	**346,019**

[1] Group totals include other occupations not specified.

[2] Farm labourers composed 82·2 p.c. of those receiving no pay. These were largely farmers' sons.

Industrial Classification.—The above occupational classification of the gainfully occupied differs from the industrial classification (Table 2) in that, in Table 1, all persons following occupations similar in nature come under the same occupational group irrespective of the industry in which employed, whereas in Table 2 persons in the same occupation may appear under several industrial groups, and any one industrial group may be made up of quite diverse occupations. For example, under "manufacturing", as an occupational group, are included only such occupations as are concerned with the making of some product, and each of these occupational classes contains every person following the occupation whether employed in factory or elsewhere. On the other hand, the group or division "manufacturing", in the industrial classification, includes occupations commercial, clerical, professional, etc., in their nature, as well as those directly connected with the making of various products, but only persons actually employed in factories come under this group. In other words, all machinists, all blacksmiths, in fact all persons following processing occupations, whether employed in factories or elsewhere, are included under the occupational group "manufacturing" in Table 1, while the industry group "manufacturing" in Table 2 includes machinists and blacksmiths working in factories only, also persons following such occupations as clerks, civil engineers, truck drivers, etc., who were employed by manufacturing concerns.

[1] Such services as health, education, etc., administered by public authority as well as by private agencies are listed elsewhere. Only services peculiar to public administration are listed under this head.

Section 2.—The Dominion Department of Labour.

The Department of Labour of the Dominion Government was established in 1900 under the authority of the Conciliation Act, 1900 (63-64 Vict., c. 24). Its chief duties originally comprised the administration of certain provisions of this statute designed to aid in the prevention and settlement of labour disputes, the administration of the Government's fair wages policy for the protection of workmen employed on Dominion Government contracts and on works aided by grants of public funds, the collection and classification of statistical and other information relative to conditions of labour, and the publication of a monthly periodical known as the *Labour Gazette*. From 1900 to 1909 the Department was administered by the Postmaster General, who was also Minister of Labour. It was constituted a separate Department under the Labour Department Act, 1909 (R.S.C., 1927, c. 111).

The work of the Department was greatly increased in 1907 by the passage of the Industrial Disputes Investigation Act (R.S.C., 1927, c. 112). At present the Department is also charged with the administration of an Act passed in 1918 known as the Employment Offices Co-ordination Act (R.S.C., 1927, c. 57), the Government Annuities Act of 1908 (R.S.C., 1927, c. 7), the Technical Education Act enacted in 1919 (R.S.C., 1927, c. 193), the White Phosphorus Matches Act of 1914 (R.S.C., 1927, c. 128), the Combines Investigation Act of 1923 (R.S.C., 1927, c. 26), the Old Age Pensions Act of 1927 (R.S.C., 1927, c. 156), the Fair Wages and Eight Hour Day Act of 1930 (20-21 Geo. V, c. 20), the Vocational Education Act, 1931 (21-22 Geo. V., c. 59), the Unemployment and Farm Relief Act, 1931

(21-22 Geo. V, c. 58), the Unemployment and Farm Relief Continuance Act, 1932 (22-23 Geo. V, c. 13), the Relief Act, 1932 (22-23 Geo. V, c. 36), the Relief Act, 1933 (23-24 Geo. V, c. 18), and the Relief Act, 1934 (24-25 Geo. V, c. 15). The scope of the Department has increased in other directions, especially in investigating the cost of living, and in connection with the International Labour Organization of the League of Nations. For a report of the operation of the Old Age Pensions Act, see p. 837 and for the proceedings under the Combines Investigation Act, 1923, see p. 850. For the operation of the Government Annuities Act of 1908 and the Technical Education Act, see the chapters on Insurance and Education, respectively.

Industrial Disputes Investigation Act.—The Industrial Disputes Investigation Act (R.S.C., 1927, c. 112), has attracted considerable favourable attention from legislators and publicists throughout the world. As enacted in 1907, it forbids strikes and lockouts in mines and certain public utility industries until the matters in dispute have been dealt with by a board of conciliation and investigation consisting of three members, two appointed by the Minister of Labour on the recommendation of the respective parties to the dispute, the third on the recommendation of the first two, or, if they fail to agree, by the Minister himself. Should either of the parties fail to nominate a board member, the Minister may appoint a fit person on its behalf. After the board has made its report, either of the parties to the dispute may reject it and declare a strike or a lockout, a course adopted, however, only in a small percentage of cases. The machinery of the Act may be extended to other industries with the consent of the parties concerned. In January, 1925, a judgment was rendered by the Judicial Committee of the Privy Council declaring that the Act as it stood was not within the competence of the Dominion Parliament.* At the ensuing session of Parliament amendments were made to the statute, with the object of limiting its operation to matters not within exclusive provincial jurisdiction. It was also provided by these amendments that the statute should apply in the case of "any dispute which is within the exclusive legislative jurisdiction of any Province and which by the legislation of the Province is made subject to the provisions of this Act".

The Legislatures of all provinces except Prince Edward Island have taken advantage of this provision and enacted enabling legislation, by which the Dominion Industrial Disputes Investigation Act becomes operative in respect of disputes of the classes named in the Dominion law and otherwise within exclusive provincial jurisdiction.

A review of the proceedings under the Industrial Disputes Investigation Act from its enactment in March, 1907, to Mar. 31, 1934, shows that, during the 27 years, 802 applications were received for the establishment of boards of conciliation and investigation, as a result of which 536 boards were established. In all but 38 cases, strikes or lockouts were averted or ended.

Fair Wages Branch.—The Fair Wages Branch of the Department of Labour is charged with the preparation of fair wages conditions and schedules of minimum wage rates, which are inserted in Dominion Government contracts and must be adhered to by contractors in the execution of such works. The number of fair wages schedules prepared, from the adoption of the Fair Wages Resolutions in 1900 up to the end of the fiscal year 1933-34 was 6,131. The number of fair wages schedules and clauses furnished during the fiscal year 1933-34 was 123.

*See p. 241 of the *Labour Gazette* for February, 1925, for text of judgment of the Judicial Committee of the Privy Council in regard to the validity of this statute.

The fair wages policy of the Government of Canada was originally based on a resolution adopted by the House of Commons in 1900 and expressed in an Order in Council adopted on June 7, 1922, and amended on April 9, 1924. As drawn up by Order in Council it was applied to contracts for building and construction operations, also to contracts for the manufacture of certain classes of Government supplies. The policy required that the current wage rates and working hours of the district should be observed in the case of all workmen employed, or if there were no current rates or hours in existence, then fair and reasonable conditions in both respects. Contracts for railway construction to which the Dominion Government has granted financial aid, either by way of subsidy or guarantee, are likewise subject to fair wages conditions. The policy has, moreover, been extended within recent years to cover contracts for works carried out by the several Harbour Commissions and aided by grants of public funds.

On May 30, 1930, an Act of Parliament was adopted, known as the Fair Wages and Eight Hour Day Act, 1930, which provides for the payment of current wage rates to all persons employed on contracts made with the Government of Canada for works of construction, remodelling, repair or demolition, provided that the wages in all cases shall be fair and reasonable. This statute also directed that the working hours of persons while so employed shall not exceed eight hours a day. It was further declared that the foregoing conditions are to be applied to all workmen employed by the Government itself on the construction, remodelling, repair or demolition of any work.

On Mar. 27, 1930, an Order in Council was passed providing that, except in cases where the work of employees was intermittent in character, or the application of the rule was not deemed to be practicable, or in the public interest, the hours of work of any Dominion Government employees who had up to that time been required to work more than eight hours daily should be reduced to eight hours a day, with a half holiday on Saturday.

An Order in Council was adopted on Dec. 31, 1934, rescinding the labour conditions previously applied to contracts for the manufacture of various classes of Government supplies, and substituting other conditions therefor. The provision for the payment of wages not less than current rates, or fair and reasonable rates if there are no current rates, is retained in the new conditions, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, 20 cents an hour. It is also declared that males and females under 18 years of age shall be entitled to rates of wages not less than those provided for women and girls in the minimum wage scales of the respective provinces, and that, in any cases where the provincial minimum wage laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Dominion contract work.

The Department of Labour is frequently consulted by other Departments of the Government regarding the wage rates to be observed in connection with work undertaken on the day-labour plan.

Labour Gazette.—A monthly publication, known as the *Labour Gazette*, has been issued by the Dominion Department of Labour since its establishment in 1900. It contains a monthly review of the industrial situation in Canada and of the state of employment, including reports of the operations of the Employment Service of Canada in the various provinces, also information relative to: labour

legislation, wage rates and hours of labour, wholesale and retail prices of staple commodities in Canada and other countries, labour disputes (including the proceedings under the Industrial Disputes Investigation Act), industrial accidents, legal decisions affecting labour, industrial training and technical education, proceedings under the Combines Investigation Act, and other matters of general or current industrial interest. The *Labour Gazette* is widely distributed throughout Canada, and the statistical and other information contained therein is constantly used in connection with wages and other issues between employers and workers. A subscription charge of 20c. per annum is made for this publication.

Labour Legislation.—Much attention is devoted to labour legislation. Information as to new laws enacted by the Dominion and the provinces is kept up to date, while notes or articles regarding their provisions are published in the *Labour Gazette*. Since 1917, the Department has published annual reports containing the text of Canadian labour laws enacted during each year, together with an introduction summarizing this legislation under subject headings. The first of these reports was based on Dominion and provincial labour legislation as existing at the end of 1915. Reports on the labour laws enacted in the four succeeding years were published in regular order. In 1920 a further consolidation was brought out and annual reports supplementary thereto were issued in 1921, 1922, 1923, 1924, 1925 and 1926. A third consolidated report on labour legislation, containing the texts of the Dominion and provincial labour laws up to the end of 1928, was issued in 1929. Annual supplements containing labour laws of subsequent years were issued in 1930 to 1933, respectively. The Department of Labour has also published articles dealing with various provincial labour laws, indicating the extent to which these have been standardized and the differences which exist.

Section 3.—Provincial Labour Departments and Bureaus.

The rapid industrial development at the end of the nineteenth century in Quebec and Ontario, the leading manufacturing provinces, brought with it the recognition of the need of special provincial offices to safeguard the interests of labour, with the result that the Ontario Bureau of Labour was established in 1900 and the Quebec Department of Public Works and Labour in 1905. In 1904 an Act was passed in New Brunswick providing for a Bureau of Labour, but this never became operative. Some years later, to cope with conditions created by the growth of industry in the West, Acts were passed providing for the creation of Provincial Bureaus of Labour in Manitoba (1915), in Sakatchewan (1920), and in Alberta (1922), while a Department of Labour was established in British Columbia in 1917. A Department of Labour was established in Nova Scotia by c. 3 of the Statutes of 1932, and the Manitoba Bureau of Labour became a Department in 1934. All these authorities publish annual reports on their activities.

The Nova Scotia Department of Labour.—The Act establishing the Nova Scotia Department of Labour provides that "the Department of Labour shall take cognizance of all matters relating to labour and shall administer such affairs, matters, Acts and regulations as the Governor in Council from time to time assigns to that Department, whether or not the same have been assigned or have belonged by or under any Act of the Legislature of Nova Scotia or otherwise to some other Department or to some member of the Executive Council".

The Department is in charge of a Minister of Labour, who has under him a Deputy Minister of Labour. The latter is empowered to collect and publish information and statistics affecting labour, and to administer such Acts as may be assigned to the Department by Order in Council. At present, labour bureaus in the province and the administration of the Factories Act have been assigned by Order in Council to the Department of Labour.

The Quebec Department of Labour.—This Department was formerly known as the Department of Public Works and Labour, each division having a separate Deputy Minister, but in 1931, the Legislature raised each division to a distinct Department.

The duties of the Department of Labour include the institution and control of inquiries into important industrial questions and those relating to manufactures, and it may collect useful facts and statistics relating thereto, to be transmitted to the Quebec Bureau of Statistics. The Department is charged with the administration of provincial Acts respecting industrial and commercial establishments, trade disputes, and the maintenance of fair wages clauses in Provincial Government contracts. The Women's Minimum Wage Commission is under its jurisdiction, together with the provincial Employment Service.

The Department is responsible for the licensing and qualification of electricians, moving picture machine operators, stationary enginemen and firemen, and pipe mechanics; it is also charged with the inspection of electrical installations, heating installations, steam, hot-water and hot-air furnaces, boilers registered under the Interprovincial Code, together with the registering of blue prints in connection with the construction of boilers. A special branch of the Department is entrusted with the inspection of public buildings and the approval of the plans of new buildings.

The Department, since the 1934 Session, is charged with the enforcement of the Collective Labour Agreements Extension Act; however, it has not the duty of leading employers and employees into the preparation of agreements. The Department has jurisdiction over the limitation of hours of work; since the coming into force of the Act giving it such authority, hours of labour, in the building trades, have been limited to forty per week throughout the province.

The Department also issues qualification certificates to workmen charged with the use and handling of explosives, and is responsible for the enforcement of the Scaffolding Inspection Act in towns where there is no municipal service providing for such duties.

The Department of Labour of Ontario.—The Department of Labour of Ontario was established in 1919 and placed under the direction of a Minister and a Deputy Minister of Labour. This Department had its origin in the Bureau of Industries formed in 1882 under the Department of Agriculture, to collect and publish statistics relating to the industries of the province and (later) to adminster the first Factory Act of 1886. In 1900 a Bureau of Labour, attached to the Department of Public Works, was authorized to collect and publish information relating to employment, wages and hours, strikes, labour organizations and general conditions of labour. Several investigations were made regarding such matters and the first free employment offices were opened by the Bureau of Labour. In 1916 this Bureau was in turn superseded by the Trades and Labour Branch, also under the Ministry of Public Works but administered by a Superintendent. The establishment of the Branch had been recommended by the Ontario Commission on

Unemployment and the expansion of the work undertaken by the Branch, and the increase in the demands made upon its resources led to the creation of a special Department of the Government by the Department of Labour Act, 1919.

The Department of Labour administers the following Acts: the Department of Labour Act; the Factory, Shop and Office Building Act; the Steam Boiler Act; the Operating Engineers Act; the Building Trades Protection Act; the Employment Agencies Act; the Apprenticeship Act; the Regulations respecting the Protection of Persons working in Compressed Air; the Regulations respecting the Protection of Persons working in Tunnels and Open Caissons; the Minimum Wage Act. The Department is required to maintain employment offices, to collect information respecting employment, sanitary and other conditions in work places, wages and hours of work, and to study labour legislation in other parts of the British Empire and in foreign countries, as well as any suggested changes in the labour laws of Ontario. The representatives of the Department of Labour have right of access to offices, factories and other work places at any reasonable hour, and may be authorized to hold inquiries under the Public Inquiries Act. The Department publishes annual reports which cover the work of the officers employed in the administration of the various Acts assigned to it. The Minimum Wage Act is administered by the Minimum Wage Board.

Manitoba Department of Labour.—The Act of 1915, establishing the Manitoba Bureau of Labour, provided that it be attached to the Department of Public Works; an amendment of 1922, however, provided for its attachment to any other Department as the Lieutenant-Governor in Council may determine. The Bureau was created a separate Department by c. 28 of the Statutes of Manitoba, 1931, but the Act was not proclaimed until July 6, 1934.

The Department is charged with the administration of the following Acts: the Bureau of Labour Act; the Manitoba Factories Act; the Bake Shop Act; the Shops Regulation Act; the Minimum Wage Act; the Elevator and Hoist Act; the Steam Boiler Act; the Building Trades Protection Act; the Public Buildings Act; the Fair Wage Act; the Electricians' License Act; the Amusements Act (Secs. 11 to 15); the One Day's Rest in Seven Act; the Employment Bureau Act.

Saskatchewan Bureau of Labour and Public Welfare.—This Bureau was created by an Act of 1934 to replace the Department of Railways, Labour and Industries. It is administered by the Minister of Municipal Affairs, assisted by a permanent Commissioner. The function of the Bureau is to administer matters relating to the relief of distress in addition to the following Acts: the Factories Act; the Building Trades Protection Act; the Employment Agencies Act; the One Day Rest in Seven Act; the Weekly Half-Holiday Act; the Coal Mines Safety and Welfare Act; the Minimum Wage Act, and the Workmen's Wage Act. It is also charged with the operation of public free employment offices; the collection and publication of information and statistics relating to employment; wages and hours of labour throughout the province; strikes and other labour difficulties; trade unions and labour organizations; the relations between capital and labour, and other subjects connected with industrial problems; the commercial, industrial and sanitary conditions of employment.

Alberta Bureau of Labour.—The Act of 1922, creating the Alberta Bureau of Labour, provided that the Bureau be in charge of a Minister having under him a Commissioner of Labour. The latter is empowered to collect and publish infor-

mation and statistics affecting labour, and to administer such Acts as may be assigned to the Bureau by Order in Council. Important among these Acts are: the Alberta Government Employment Bureau Act; the Minimum Wage Act; the Boilers Act; the Factories Act; the Theatres Act; the Trade Schools Act.

The British Columbia Department of Labour.—This Department was instituted by an Act of 1917, under a Minister and Deputy Minister of Labour. It administers the laws of British Columbia affecting labour, and is empowered to collect information respecting industries, wages, employment, prices, labour organizations and other data pertaining to labour problems. Prominent among the Acts administered by of the Department are: the Male Minimum Wage Act 1934; the Female Minimum Wage Act 1934; the Hours of Work Act 1934; these are administered by the Board of Industrial Relations, the Deputy Minister of Labour being Chairman of the Board. Other activities of the Department include the administration of: the Semi-monthly Payment of Wages Act; the Factories Act; and the operation of employment bureaus within the Province.

Section 4.—Canada and the International Labour Organization.*

The International Labour Organization of the League of Nations was set up in 1919 in accordance with Part XIII of the Treaties of Peace, to promote the improvement of industrial conditions by legislative action and international agreement.

The Organization comprises: the International Labour Conference, which meets annually and is composed of four representatives of each Member State, two of whom are government delegates, while two represent employers and workers respectively; and the International Labour Office in Geneva, which functions as a secretariat of the annual conference and also collects and publishes information on subjects relating to industrial life and labour. The Office is under the control of a Governing Body, consisting of 32 persons, appointed by the International Labour Conference, of whom 16 represent governments, 8 represent employers and 8 represent workers. In addition to its control of the Labour Office, the Governing Body is charged with the preparation of the agenda of the annual conference.

Under the terms of the Peace Treaties, eight of the government seats on the Governing Body are held by the countries of "chief industrial importance". Canada was designated by the Council of the League of Nations in 1922 as one of these eight States of "chief industrial importance". Sixty-two countries are members of the International Labour Organization, including the United States and Russia, which became members during the past year. In January, 1935, the list of eight states was revised by the Governing Body in order to permit of the inclusion of the United states and Russia. Canada and Belgium were called on to surrender their permanent seats at this time but were accorded the status of Deputy Members until the Governing Body is reconstituted in 1937. The present President of the Trades and Labour Congress of Canada is one of the eight workers' representatives on the Governing Body.

The conclusions of the International Labour Conference are cast in the form of draft conventions or recommendations, addressed to the national governments which comprise the membership of the International Labour Organization. A

*On this subject see also the 1921 Year Book, pp. 607-609; 1922-23 Year Book, pp. 704-707; 1924 Year Book, pp. 666-670; 1925 Year Book, pp. 676-678; 1926 Year Book, pp. 679-681; 1927-28 Year Book, pp. 735-737; 1929 Year Book, pp. 725-727; 1930 Year Book, pp. 710-712; 1931 Year Book, pp. 753-755; 1932 Year Book, pp. 633-634; and 1933 Year Book, pp. 750-752.

two-thirds majority of the Conference is required for the adoption of either a draft convention or recommendation. Under the Treaties of Peace, the Member States are bound to bring the draft conventions or recommendations before the authority or authorities within whose competence the subject matter lies, for the enactment of legislation or other action. Thus the findings of the Conference only become binding in the various countries concerned if and when action regarding them is taken by the latter.

The Dominion Department of Labour is entrusted with the duties arising out of the relations of Canada with the International Labour Organization. These have entailed much correspondence, not only with the International Labour Organization but also with the different Departments of the Dominion Government, with the provinces, and with employers' and workers' organizations. Replies have also been prepared in the Department of Labour to various questionnaires issued by the International Labour Office. Performance of these duties has necessitated a close study of the different technical questions which have figured on the agenda of the various conferences and at the meetings of the Governing Body. A bulletin entitled "Canada and the International Labour Conference" has been issued by the Department of Labour, furnishing information respecting the International Labour Organization. Comprehensive articles dealing with the proceedings of the annual sessions of the International Conference have been published from year to year in the *Labour Gazette*. These articles contain the text of the various draft conventions and recommendations of the Conference.

Eighteen sessions of the International Labour Conference have been held. Forty-four draft conventions and 43 recommendations have been adopted at these annual gatherings. The draft conventions and recommendations of the Conference have, among other subjects, related to the following: hours of labour, measures for the avoidance of unemployment, employment conditions of women and children, employment conditions of seamen, employment in agriculture, weekly rest, statistics of immigration and emigration, principles of factory inspection, inspection of emigrants on board ship, workmen's compensation for accidents and occupational diseases, social insurance, minimum wages, prevention of accidents to dockers, forced labour, and regulation of hours of work of salaried employees and of workers in coal mines.

Up to Dec. 31, 1934, 636 ratifications of these conventions had been registered with the League of Nations, of which 11 were conditional or with delayed application; 27 had been approved by the competent national authority and 90 had been recommended to the competent national authority for approval.

Canadian Action on Draft Conventions and Recommendations.—The action taken by the Dominion and the Provincial Governments on the draft conventions and recommendations of the International Labour Conference has been summarized in the articles on this subject published in previous Year Books and referred to in the footnote on p. 809.

Section 5.—Organized Labour in Canada.

The Dominion Department of Labour publishes an annual report on labour organization; this sets out the various branches of unionism in existence, the principles on which they are founded, their chief activities, and statistics of the different groups comprised in the trade unions of the Dominion. Reference is also made in this annual report to the principal international labour organizations with which the organized workers of Canada are affiliated.

Trade unionism in Canada occupies a unique position by reason of the fact that a large number of organized workers in the Dominion are members of organizations whose headquarters are located in a foreign country, *viz.*, the United States. In years gone by Canadian workmen who sought a livelihood in the United States greatly outnumbered those who came from that country to Canada. As industry was further developed in the United States there arose there a number of unions of various crafts, and with these the Canadian workers soon became affiliated. With the development of industry in the Dominion, many of these Canadians returned to their native land, bringing with them the gospel of trade unionism and collective bargaining as a means of protecting their rights. In many instances these trade unionists become the nuclei of strong bodies of organized workers formed in Canadian cities.

The usual résumé of the origin and growth of the trades union movement in Canada has been omitted in this edition, owing to considerations of space. The interested reader is referred to pp. 712-714 of the 1930 edition of the Year Book and to "Labour Organization in Canada, 1931", published by the Dominion Department of Labour. This latter publication presents the history and present organization of trades unionism in the Dominion in a very comprehensive manner. The following paragraphs give a short sketch of the present organization of the five main groups into which Canadian labour organizations now fall.

Trades and Labour Congress of Canada.—Through the initiative of the Toronto Trades Assembly (now the Toronto District Trades and Labour Council), the first national labour organization, the Canadian Labour Union, was formed in Toronto in September, 1873. This organization held its second and third annual meetings in 1874 and 1875, but disappeared as a result of the serious depression of the later '70's. In 1883 the Trades and Labour Council of Toronto, feeling the necessity of the wage-earners of Canada having a medium through which to express their opinions, assumed the responsibility of calling another trades and labour congress, which met in Toronto on Dec. 26, with 47 delegates. On the summons of the Toronto Council, a second meeting, with 109 delegates, assembled on Sept. 14, 1886, the first occasion on which any labour body outside of the province of Ontario was represented. A permanent organization was effected at this meeting under the name of "Trades and Labour Congress of the Dominion of Canada". This was the title of the organization until 1895, when the title "Trades and Labour Congress of Canada" was adopted in preference to "Canadian Federation of Labour". Since 1886 conventions have been held annually, the 1934 meeting in Toronto being counted as the 50th. The Trades and Labour Congress is representative of international trade unionism in the Dominion, the bulk of its membership being drawn from the international organizations which have local branches in Canada. According to reports for 1934, the Congress received payment of per capita tax on the Canadian membership of 60 international bodies and also from two national organizations which had their entire membership in the Dominion; the combined membership was 103,424, comprised in 1,523 local branches.

All-Canadian Congress of Labour.—The All-Canadian Congress of Labour was organized Mar. 16, 1927, by labour bodies not eligible for membership in the old established Trades and Labour Congress of Canada. One of the promoters of the new body was the Canadian Federation of Labour, which was formed as a result of the expulsion from the Trades and Labour Congress of Canada of Knights of Labour assemblies and all other unions which were composed of members of

crafts over which existing international organizations claimed jurisdiction. With the formation of the All-Canadian Congress of Labour the Canadian Federation passed out of existence. At the close of 1933, the All-Canadian Congress of Labour had eleven central bodies in affiliation, with a combined membership of 51,998, as well as 39 directly chartered local unions with a membership of 3,120, making a total combined reported membership of 55,118.

Membership of International Organizations in Canada.—At the close of 1933 there were 78 international craft organizations having one or more local branch unions in Canada, the same as the number recorded in 1932. These bodies among them had 1,753 local branches in the Dominion with 140,801 members. The membership of the two industrial unions with branches in the Dominion was 26,918 comprised in 54 branches. Thus the total international trade union membership in Canada at the close of 1933 was 167,719 (Table **4**). The international *craft* organizations alone represent about 49 p.c. of the total of all classes of workers in the Dominion organized under trade union auspices as shown in Table **3**.

Canadian Central Labour Bodies.—There are in Canada 34 Canadian central labour bodies, 21 of which are in direct opposition to the international organizations. In some instances these Canadian central labour bodies have been formed by secessionists from international unions. The combined membership of the Canadian central labour organizations on Dec. 31, 1933, was 76,062, comprised in 748 local branches (Table **5**).

Membership of Independent Units.—There are 42 independent local labour bodies in the Dominion, 41 of which had a membership of 15,545 at the end of 1933.

Federation of Catholic Workers of Canada.—During the period when the Knights of Labour operated in Quebec, there existed also four independent unions, one of labourers and three of leather and shoe workers. Up to 1902 these several bodies were represented at the annual conventions of the Trades and Labour Congress of Canada. In that year, in an effort to eliminate a duplication of unions and bring the independent bodies under the banner of the international organizations, the Trades Congress denied them further representation. The Knights of Labour assemblies grandually disappeared, but the independent unions continued to exist. Up to the time of the expulsion by the Trade Congress of those bodies which were outside the ranks of the international organizations, there was only one Catholic union, that composed of shoe workers in the city of Quebec, which had accepted the social doctrine of the Roman Catholic Church and admitted a chaplain (a member of the clergy), this course being adopted in 1901 following the adjustment of a dispute in the shoe industry in that city by the archbishop of the diocese. Some years later, a number of other national unions were formed in the province of Quebec, all of which accepted for their guidance the declarations of Pope Leo XIII, who on May 15, 1891, issued an encyclical on "The Condition of the Working Classes", the provisions of which were subsequently proclaimed by Pope Pius X as fundamental rules for workingmen's associations. In 1918, a conference of national unions was held in Quebec city, followed by other meetings in Three Rivers in 1919 and Chicoutimi in 1920; the delegates at the latter conference, numbering 225 from 120 unions, decided to establish a permanent central body to co-ordinate the work of the scattered units. Accordingly, at the 1921 conference held in Hull, at which approximately 200 delegates representing 89 unions were present, a constitution to govern the new body was approved. The name selected was "Federation

of Catholic Workers of Canada" and permanent officers were elected, the constitution and by-laws becoming effective on Jan. 1, 1922. From information at hand, there are 110 National Catholic unions with a combined membership of 26,894.

One Big Union.—Delegates from Western Canada to the Quebec convention of 1918, dissatisfied with the alleged reactionary policy of the Trades and Labour Congress of Canada, held a caucus at which it was decided to concentrate their energies towards having the Trades Congress legislate in accordance with their views. Some months later a meeting of delegates was called by the British Columbia Federation of Labour to assemble immediately following the annual convention of that body, which, for the first time in its history, met outside of the province under its jurisdiction, in Calgary. The conference assembled on Mar. 13, 1919, with 239 delegates present; the outcome of the meeting was the formation of an industrial organization, the "One Big Union". On June 11, 1919, a conference of the new body was held in Calgary to further the plans of the organization, which had a membership of 41,150 at the close of 1919. From the outset the O.B.U. met with much opposition from the old-established labour unions, represented by the Trades and Labour Congress of Canada, which was opposed to the substitution of industrial unionism for the existing system of craft unions. According to information supplied by the general secretary, the O.B.U., at the close of 1933, had 47 units under charter, one of which was located in the United States, as well as two central labour councils (bodies similar to trades and labour councils), the combined reported membership being 23,640.

Total Reported Membership of Organized Labour in Canada.—The numerical strength of organized labour in Canada at the close of 1933 was given by the Department of Labour as follows: international organizations, 1,807 local branches with an aggregate membership of 167,719; Canadian central labour bodies, 748 branches and 76,062 members; independent units, 42 with 15,545 members; National Catholic unions, 110 with 26,894 members; grand total, 2,707 local branches and 286,220 members. As compared with 1932, this represents a decrease of 18 branches but a gain of 2,644 members. Table **3** shows by years the membership of trade unions in Canada since 1911.

3.—Membership of Trade Unions in Canada, 1911-33.

Year.	Members.	Year.	Members.	Year.	Members.
1911	133,132	1919	378,047	1927	290,282
1912	160,120	1920	373,842	1928	300,602
1913	175,799	1921	313,320	1929	319,476
1914	166,163	1922	276,621	1930	322,449
1915	143,343	1923	278,092	1931	310,544
1916	160,407	1924	260,643	1932	283,576
1917	204,630	1925	271,064	1933	286,220
1918	248,887	1926	274,064		

International Trade Unions Operating in Canada.—Table **4** gives the names of the 78 international craft labour organizations and the two industrial unions which now carry on operations in Canada, and shows: (1) the number of branches which were in existence in the Dominion at the close of 1933, and (2) the reported membership.

4.—International Trade Unions Operating in Canada, showing Numbers of Branches and Members, December, 1933.

International Organization.	No. of Branches in Canada.	Reported Members in Canada.

Section 6.—Fatal Industrial Accidents.

Statistics of fatal industrial accidents have been compiled by the Dominion Department of Labour since 1903, the data being obtained from provincial Workmen's Compensation Boards, the Board of Railway Commissioners for Canada and various other governmental authorities, from departmental correspondents and from press clippings. Table 6 shows the number of fatal industrial accidents reported to the Department during each year from 1930 to 1934 inclusive. The number of fatalities in each of the different industries is also shown as a percentage of the total number. Preliminary figures show 974 fatal industrial accidents in 1934.

[1] Figures subject to revision.

Causes of Fatal Accidents.—The classification of fatal accidents in 1934 by causes shows that the largest number, 282, came under the category "by moving trains, vehicles, etc". This includes all accidents due to cars or engines, including mine and quarry cars, and to automobiles and other power vehicles and horse-drawn vehicles, as well as accidents caused by moving implements, by moving watercraft and by aircraft. Next in order as a cause came "falls of persons", 166 in number, including those who fell from some elevation and those who fell into pits, shafts, holds of vessels, harbours, rivers, etc. "Dangerous substances" including electric current, explosives, hot and inflammable substances, gas fumes, boiler explosions, etc., caused 128 fatalities. Fatalities numbering 142 were caused by falling objects. Animals caused 42 fatalities, including 23 caused by horses. Sixteen fatalities were caused by working machines, 20 by prime movers, 30 by striking against or being struck by objects, 30 by handling of heavy or sharp objects, 20 by hoisting apparatus, 2 by tools, 4 by infection, 35 due to industrial diseases, 6 by shooting and violence, 17 by cave-ins, and 21 by lightning, frost, storms and sunstroke.

Numbers of industrial accidents, fatal and non-fatal, dealt with by the various provincial Workmen's Compensation Boards are included in the following section on Workmen's Compensation in Canada.

Section 7.—Workmen's Compensation in Canada.

An account of the development of workmen's compensation legislation in Canada from employers' liability legislation was given at pp. 744–746 of the 1927–28 Year Book, while a summary of the 1932 legislation with regard to workmen's compensation appears in the general sketch of labour legislation in Canada at pp. 844–849 of the current edition. Details regarding the operation of the various Workmen's Compensation Boards of the provinces are given below.

Operations of the Workmen's Compensation Boards.—*Nova Scotia.*—The Workmen's Compensation Act was passed in 1915 but only became effective on Jan. 1, 1917. During the eighteen years between that date and Dec. 31, 1934, 128,202 accidents were reported to the Board, of which 112,904 were compensated as per Table 7. Prior to Jan. 1, 1920, medical aid was only furnished in special cases.

New Brunswick.—The Workmen's Compensation Act of New Brunswick was passed in 1918. It extends to a wide range of industries, and is administered by a Board of three persons, levying assessments and paying benefits. For the sums paid out annually from 1920 as compensation and for medical aid see Table 8.

Quebec.—The Quebec Workmen's Compensation Commission was established in 1928 by authority of cc. 79 and 80 of the Statutes of that year. The Act was brought into force by proclamation on Mar. 22, 1928, operations of the Commission commencing as of Sept. 1, 1928. Under this Act, the Quebec Commission did not insure employers against their liability. On April 4, 1931, a new Act was enacted by the Quebec Legislature (21 Geo. V, c. 100), effective Sept. 1, 1931, providing for state insurance, practically along the same lines as the Workmen's Compensation Act of Ontario. This new Act was amended by 23 Geo. V. c. 98, enacted on Apr. 13, 1933. Table 9 shows the operations of the Quebec Commission from Sept. 1, 1928, to Dec. 31, 1933.

Ontario.—Under the system operated by the Ontario Workmen's Compensation Board in Schedule 1, where the liability is collective, 24 classes of industries pay various percentages of their pay rolls annually to the Board and escape individual civil liability for accidents and certain specified industrial diseases. The percentage of pay roll collected by the Board is graded according to the degree of hazard in the occupation and ranged in 1934 from 10 cents per $100 of pay roll in blue-printing to $13.50 per $100 in transportation of freight by aeroplane. The average for all classes was $1.16 per $100 of pay rolls which amounted to $335,257,000. Certain

other industries under Schedule 2, including municipal undertakings, railways, car shops, telegraphs, telephones, etc., are made individually liable to pay the rates of compensation fixed under the Act. Employees of the Dominion or of the province, killed or injured in the discharge of their duty, are by special legislation placed on the same footing as those of private employers of the second class.

Statistics of the benefits awarded and the accidents to workers reported during the first 20 years of the operation of the Act appear in Table **10**; 49,302 accidents were *paid for* during the year 1934 including: 190 cases of death, 14 of permanent total disability, 1,705 of permanent partial disability, 23,238 of temporary disability and 24,155 in which medical aid only was provided. These latter are all under Schedule 1, as medical aid in Schedule 2 cases and Crown cases is furnished directly by the employer.

[1] No provision for medical aid.
[2] Half year only.

Manitoba.—Under the Workmen's Compensation Act, effective Mar. 1, 1917, Part 1 of the Act, dealing with workmen in hazardous occupations, is administered by the Workmen's Compensation Board, which charges insurance rates according to the hazard of the industry, the sums received by the workman being in lieu of the rights of action previously existing. The province, the city of Winnipeg, and certain corporations operating public utilities are permitted by the law to practise self-insurance.

From the date of the coming into force of the Act to Dec. 31, 1933, the Board dealt with 89,957 compensable accidents and paid out $12,137,105 for compensation and medical aid. Of the accidents in 1933, 2,655 involved medical aid costs only, 2,680 involved temporary and 160 permanent disability, while 10 resulted in death (Table **11**).

Saskatchewan.—The Workmen's Compensation (Accident Fund) Act became fully effective July 1, 1930, and covers practically all employees in the province except railway employees engaged in the running trades, casual workers, farm and ranch labourers, domestic and menial servants, janitors, retail store employees, and persons who cannot be classed as workmen.

The Act is administered by a Board of three and imposes compulsory collective liability on the employers covered. The schedule of benefits is similar to that provided by other compensation Acts. Table **12** shows the number of accidents and benefits paid to the end of 1933.

[1] Six months.

Alberta.—The Workmen's Compensation Act of 1918 became effective Aug. 1, 1918, as regards mining, and Jan. 1, 1919, in respect of almost all industries except agriculture, railroading and the operation of retail stores and offices. Railroading (except for the running trades) was brought within the scope of the Act in 1919, and a further amendment in 1928 left only conductors and trainmen exempt from the operations of the Act.

Table **13** shows the operations of the Board for the calendar years 1921 to 1933. Of the 8,160 accidents reported in 1933, 21 were fatal and 57 resulted in some permanent injury. The amounts shown below do not include sums transferred to the pension fund, which had assets amounting to $2,842,089 on Dec. 31, 1933, nor do they include administration expenses nor sums set aside to cover estimated liabilities.

British Columbia.—The Workmen's Compensation Act, effective Jan. 1, 1917, provides compulsory accident insurance in almost every industrial occupation carried on in the province, protecting in 1933 approximately 120,000 employers with a pay roll of almost $110,000,000. Insurance rates levied against employers are graded according to the hazard of the industry. All employers under the Act are required in addition to deduct one cent per day or part thereof from the wages of employees and to remit this money to the Board to the credit of the medical aid fund, which provides all necessary medical and surgical and hospital expenses for injured employees. For figures see Table **14.**

Section 8.—Strikes and Lockouts.

Statistics of strikes and lockouts in Canada have been collected by the Dominion Department of Labour since its establishment in 1900. Table **15** shows the numbers of disputes, of employees involved in disputes, and the time loss in working days for each year from 1911 to 1934 and the totals for the period beginning 1901. The items in the columns headed "time loss in working days" in the tables following are calculated by multiplying the number of persons directly involved in strikes and lockouts by the number of working days they are so affected during the time the disputes are in existence. Tables **16** and **17** give detailed analyses, by provinces and by industries, for 1933 and 1934.

Summary tables of the figures with details as to strikes and lockouts during 1934 will be found in the *Labour Gazette* for February, 1935, pp. 105-129.

Industrial Disputes in Recent Years.—During 1933 and 1934 there were increases in the number of disputes, in the number of workers involved and also in the time loss as compared with any year during the period 1926 to 1932, when the figures were relatively low, largely because there were then no coal-mining disputes involving large numbers of workers for long periods. In the last two years there was a considerable increase in the number and importance of disputes in industries other than coal mining, including important strikes in clothing manufacturing, in logging, sawmilling and woodworking. The number of disputes in 1934 was 191 as compared with 125 in 1933, while the number of workers involved was 45,800 as compared with 26,558 in 1933, the time loss being 574,519 man working days as compared with 317,547 in 1933. Table **15** includes figures regarding coal mining and industries other than coal mining.

15.—Strikes and Lockouts in Canada, calendar years 1911-34.

NOTE.—For the years 1901-10, see the 1933 Year Book, p. 763.

[1]Figures for disputes extending over the end of a year are here counted more than once. [2] The totals are for the whole period of record, 1901-34.

Table **16** is a record of industrial disputes by provinces for the years 1933 and 1934. In 1933 the most important disputes were: in Ontario, in logging and in textile and clothing; in Quebec, in the clothing industry and in furniture manufacturing; in British Columbia, in logging; and in Nova Scotia in coal mining. In 1934 important disputes occurred in Ontario in clothing factories, also in fur, shoe and furniture factories, in British Columbia in logging, in Quebec in clothing factories, in Manitoba in metal mining and in clothing factories, and in Nova Scotia in coal mining.

[1]Non-ferrous smelting is included with Mining; erection of all large bridges is under Bridge Construction; water service is under Public Administration.

Causes and Results of Industrial Disputes.—During 1933 and 1934, as in previous years, most of the disputes (92 and 139 respectively) were in regard to wages, or wages and working conditions. In 1934 there were only 10 strikes against decrease in wages, whereas in 1933 there were 20. A number of disputes were in regard to trade unionism, 35 in 1934 and 21 in 1933, as compared with 26 in both 1932 and 1931. In both years slightly over half of the disputes were terminated by direct negotiation between the parties, over one-quarter by the return of workers or their replacement, and about one-eighth of the disputes by conciliation.

Section 9.—Employment and Unemployment.

Subsection 1.—Operations of the Employment Service of Canada.

Employment Service of Canada.—Under Sec. 3 of The Employment Offices Co-ordination Act (c. 57, R.S.C., 1927), an Act passed by the Dominion Parliament in May, 1918, the Minister of Labour is empowered:—

"(a) to aid and encourage the organization and co-ordination of employment offices and to promote uniformity of methods among them;
"(b) to establish one or more clearing houses for the interchange of information between employment offices concerning the transfer of labour and other matters;
"(c) to compile and distribute information received from employment offices and from other sources regarding prevailing conditions of employment".

The Act further provides that certain sums of money are to be appropriated annually and paid to the provinces on a basis proportionate to the amount that each expends on the maintenance of employment offices.

The desired uniformity and co-ordination of employment office activities throughout the various provinces are obtained by having the Dominion's payments contingent upon an agreement ensuring that the provinces, in the conduct of their employment offices, shall endeavour to fill situations in all trades and occupations for both men and women, and that no charge shall be made to employers or employees for this service. Each province agrees to maintain a provincial clearance system in co-operation with the interprovincial clearance system established by the Dominion Government, in order to secure the necessary mobility of labour as between localities in the same province or in different provinces. For the fiscal year 1934–35, agreements were concluded with all of the provinces except Prince Edward Island. Thus is formed the Employment Service of Canada—a chain of employment offices reaching from Halifax to Vancouver. At the time the Act came into force only 12 provincial employment offices were operated in Canada. This number was steadily increased until, at the close of 1919, due to the impetus given by the Employment Offices Co-ordination Act together with the requirements of the demobilization period, offices were functioning at 84 different centres. Subsequent contractions have reduced the Service to offices permanently located at 65 centres (on Dec. 31, 1934), distributed by provinces as follows: Nova Scotia, 3; New Brunswick, 4; Quebec, 7; Ontario, 26; Manitoba, 3; Saskatchewan, 9; Alberta, 5; and British Columbia, 8.

Employment Service Council of Canada.—An Order in Council, issued in 1918 in pursuance of the Act, provided for the formation of a body to be advisory to the Minister of Labour in the administration thereof. This body, known as the Employment Service Council of Canada, is composed of representatives of the Dominion Departments of Labour and of Pensions and National Health, the Provincial Governments, the Canadian Manufacturers' Association, the Canadian Construction Association, the Trades and Labour Congress of Canada, the Railway Association of Canada, the Railway Brotherhoods, the Canadian Lumbermen's Association, the Canadian Council of Agriculture and the returned soldiers. At the eleven meetings of the Council, the most recent of which was held on Aug. 21-22, 1930, various recommendations and suggestions relative to employment office administration were brought forward and presented to the Minister.

Operations of Employment Offices.—Statistics covering the work of the local offices are collected and tabulated by the Employment Service Branch of the Department of Labour. Table 18 shows the positions available, applications for

work and placements effected by the Service in each year since 1920 for the Dominion, and for the years 1933 and 1934 by provinces. During 1934 there were 724,365 applications for employment, 427,792 vacancies and 406,091 placements recorded, as compared with 674,221 applications, 369,685 vacancies and 352,097 placements in 1933. About 45 p.c. of the total placements were of a casual nature, many of these being the result of work given on a rotation basis by municipalities and provincial governments on various relief schemes throughout the year to persons who, otherwise, would have been unemployed.

Reduced Railway Fares.—In order to facilitate the movement of labour in cases where there were not enough workers in any one locality to fill the available vacancies, the Employment Service, by special arrangement with nearly all the members of the Canadian Passenger Association, has been granted the privilege of issuing certificates which entitle the bearers to purchase railway tickets at the reduced rate of 2·7 cents per mile. This rate is for a second class ticket and is applicable only to fares of not less than $4. During 1933, 3,850 certificates were issued, 2,694 to persons proceeding to points within the same province as the despatching office and 1,156 to workers going to points in other provinces. During 1934, 7,961 certificates for special rates were granted, 5,972 to persons travelling to employment within the same province as the despatching office and 1,989 to persons for whom employment had been secured in other provinces.

[1]Figures by provinces for the years 1920-25 will be found at p. 703 of the 1926 Year Book, for 1926-28 at p. 731 of the 1930 Year Book, for 1929-30 at p. 773 of the 1931 Year Book and for 1931-32 at p. 768 of the 1933 Year Book.

Subsection 2.—Unemployment as Reported by Trade Unions.

Monthly statistics on unemployment are compiled and published by the Employment Service Branch of the Dominion Department of Labour, based on returns received from 1,700 local trade unions having an aggregate membership of nearly 156,000 workers. "Unemployment" as here used means involuntary idleness, due to economic causes. Persons engaged in work other than their own trades, or idle because of illness, are not considered as unemployed, while unions involved in industrial disputes are excluded from the tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentages of unemployment are based, it should be understood that the figures for each month have reference only to the reporting organizations. Table **19** is a record of unemployment in trade unions, for the past 20 years, by provinces. The maximum of unemployment in 1934 was in January, when the percentage stood at 21·2; in 1933 the January figure of 25·5 p.c. constituted the maximum. In 1933 the minimum, reached in both September and October, was 19·8 p.c., while the 1934 low was 16·2 p.c. recorded in October. Employment among organized workers, as indicated by these statistics, was more active on the average in 1934 than 1933, the average of the monthly figures of unemployment for 1934 being 18·2 p.c., while for 1933 the corresponding figure was 22·3 p.c.

19.—Percentages of Unemployment in Trade Unions, by Provinces, half-yearly, 1915-32, and by months, 1933 and 1934.

NOTE.—For the percentages of unemployment for 12 months in 1921 and 1922, see p. 732 of the 1922-23 Year Book; for 12 months in 1923, p. 688 of the 1924 Year Book; for 12 months in 1924, p. 700 of the 1925 Year Book; for 12 months in 1925, p. 704 of the 1926 Year Book; for 12 months in 1926, p. 757 of the 1927-28 Year Book; for 12 months in 1927, p. 745 of the 1929 Year Book; for 12 months in 1928 and 1929, p. 733 of the 1930 Year Book; for 12 months in 1930, p. 774 of the 1931 Year Book; for 12 months in 1931, p. 651 of the 1932 Year Book, and for 12 months in 1932, p. 769 of the 1933 Year Book.

Subsection 3.—Employment as Reported by Employers.

The Dominion Bureau of Statistics tabulates monthly reports of the numbers employed by firms having 15 or more persons on their staffs; the returns are representative of practically every industry except agriculture and the more specialized business and professional callings. During 1934 about 8,700 of these employers reported an average working force of 893,653 persons, varying from 821,131 on Jan. 1, to 941,165 at the beginning of July. The general recovery in industrial activity, in evidence from the second quarter of 1933, continued with considerable force in 1934. The fluctuations in the latter differed from those of the preceding year, but the gains then made were consolidated and extended, with the result that employment in 1934 was in greater volume than in either 1933 or 1932. A significant feature of the situation during 1934 was the widespread nature of the revival, in

which all five economic areas, the leading industrial cities and the principal industries shared to a greater or less degree.

Works undertaken for the relief of unemployment continued to be an important factor during 1934, when the number of man-days worked on a wage basis, as reported to the Dominion Unemployment Relief Commissioner by Dominion and provincial authorities, was 8,749,940; there were also 9,557,862 man-days relief work afforded in publicly operated camps where the unemployed were cared for and given useful work in return for subsistence and a small cash allowance. During 1933, the man-days worked on a wage basis numbered 1,643,111, and the number of man-days relief work afforded on a subsistence basis was 9,714,701.

The fluctuations in employment in the past nine years are illustrated in the following chart. This shows the generally upward movement that characterized industrial activity in the twenty months from the low point of employment in the depression on Apr. 1, 1933, to the close of 1934.

Employment by Economic Areas.—The recovery in industrial activity during 1934 extended to all five economic areas, but to a varying extent; the situation at the close of the year was decidedly better in each of the districts than it had been at the opening of 1934, and also than it was at the end of 1933. The greatest proportional gain between the 1934 low and high points occurred in Ontario, where the index, at its maximum of 109·9 on July 1, was 18·7 points higher than the minimum of 91·2 recorded on Jan. 1. Employment in all five economic areas was greater, on the average, in 1934 than in the preceding twelve months. Table **20** is a record of employment in the five economic areas, by months, in 1933 and 1934, with averages for preceding years since 1921.

20.—Index Numbers of Employment as Reported by Employers in Economic Areas, as at the First of each Month, January, 1933, to December, 1934, with Yearly Averages since 1921.

NOTE.—These indexes are calculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of employees reported in the indicated economic area to the total reported by all employers making returns in Canada on Dec. 1, 1934.

Relative weights of employment in economic areas, as at Dec. 1, 1934[2]	8·2	28·5	42·2	12·8	8·3	100·0

[1] Since the average for the calendar year 1926, including figures up to Dec. 31, 1926, is the base used in computing these indexes, the average index here given for the 12 months Jan. 1-Dec. 1, 1926, generally shows a slight variation from 100. [2] Percentages of Dominion total.

Employment by Cities.—Separate tabulations are made for the eight leading industrial centres, of which Montreal, Toronto, Ottawa, Hamilton, Windsor*, Winnipeg and Vancouver reported improvement in 1934, while in the eighth—Quebec city—the index averaged the same as in 1933. It is of significance that the recovery in the cities has generally been at a slower rate than in the Dominion as a whole. This is partly accounted for by the concentration of single homeless unemployed men in publicly-maintained construction camps outside the munici-

*Includes adjacent "Border Cities".

palities. The unusually large gains in industries ordinarily operated in the rural areas, such as mining, logging, lumbering and canning, also contributed to the disparity in the increase in the cities as compared with the Dominion as a whole. Still other factors are the forces, legislative and other, which operate to maintain wages in the cities at a relatively higher level than in towns and villages, thus tending to hasten recovery in the smaller centres at the expense of the larger units of population, where taxes, rents, etc., are necessarily higher. Table 21 gives monthly indexes in the cities in 1933 and 1934, with yearly averages since 1922.

21.—Index Numbers of Employment as Reported by Employers in Leading Cities, as at the First of each Month, January, 1933, to December, 1934, with Yearly Averages since 1922.

NOTE.—These indexes are calculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of employees reported in the indicated city to the total reported by all employers making returns in Canada on Dec. 1, 1934.

[1] Since the average for the calendar year 1926, including figures up to Dec. 31, 1926, is the base used in computing these indexes, the average index here shown for the 12 months Jan. 1-Dec. 1, 1926, generally shows a slight variation from 100. [2] Includes adjacent "Border Cities". [3] Percentages of Dominion total.

Employment by Industries.—An analysis of the returns by industries shows widespread improvement in 1934 as compared with the preceding year. Manufacturing, logging, mining, construction and maintenance, services and trade recorded the most important gains, while among the chief industrial groups only communications showed a decline in comparison with the statistics for 1933. Within the manufacturing division, there were especially pronounced advances in the lumber, rubber, textile, clay, glass and stone, electrical apparatus, iron and steel, non-ferrous metal and miscellaneous manufactures. Table 22 gives index numbers of employment by main industrial groups.

22.—Index Numbers of Employment as Reported by Employers, by Industrial Groups, as at the First of each Month, January, 1933, to December, 1934, with Yearly Averages since 1921.

NOTE.—These indexes are calculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of the employees reported in the indicated industry to the total reported by all employers making returns in Canada on Dec. 1, 1934.

[1] Since the average for the calendar year 1926, including figures up to Dec. 31, 1926, is the base used in computing these indexes, the average index here given for the 12 months Jan. 1–Dec. 1, 1926, generally shows a slight variation from 100. [2] Percentages of Dominion total.

Subsection 4.—Unemployment Relief.

The assistance rendered by the Dominion Government under The Unemployment Relief Act, 1930, The Unemployment and Farm Relief Act, 1931, and The Relief Act, 1932, is fully set out in the Canada Year Books for the years 1931, 1932, and 1933 respectively. The recapitulation appearing at the end of this statement shows the Dominion's disbursements under those statutes as at Jan. 31, 1935.

The Relief Act, 1933.—The Relief Act, 1933, which received Royal Assent on Mar. 30, 1933, was enacted at the fourth session of the 17th Parliament. The administration of the Act was, by Order in Council, vested in the Minister of Labour.

Pursuant to the terms of the agreements entered into between the Dominion and the provinces, the Dominion continued under the 1933 Act to contribute to the expenditures of the provinces for direct relief, the contribution to organized municipalities being 33⅓ p.c., with equal contributions from the province and municipality concerned. In the case of unorganized territory, the Dominion continued to pay 50 p.c. of the provincial expenditures for direct relief. In the four western provinces, the Dominion also continued to contribute to the care of homeless unemployed persons, the contribution of the Dominion being 20 cents per day per individual cared for in camps and urban centres, and $5 per month for each individual placed on a farm.

Under the agreements contributions were also made by the Dominion for approved work in connection with the construction of the Trans-Canada Highway and also for provincial roads and undertakings and work carried out by municipalities. Relief works in the National Parks were continued by the Department of the Interior, while the Department of National Defence continued to operate camps throughout the Dominion for the care of single homeless unemployed men.

The extent of the Dominion's expenditures under The Relief Act, 1933, as at Jan. 31, 1935, is indicated in the recapitulation of relief expenditures shown in Table **23** at the end of this summary.

The Relief Act, 1934.—At the fifth session of the 17th Parliament, The Relief Act, 1934, which received the Royal Assent on April 20, 1934, was enacted. The administration of the Act was, by Order in Council, vested in the Minister of Labour.

Under this statute the Dominion continued contributing to the direct relief expenditures of the provinces and municipalities to July 31, 1934, on a similar basis to that in effect under the Relief Act, 1933.

The agreements with the provinces under the Relief Act, 1934, provide that from July 31, to Mar. 31, 1935, the Dominion's contribution for the relief of necessitous persons be made in the form of monthly grants-in-aid. In addition to the monthly grants-in-aid, provision is made for carrying to completion with

Dominion assistance such undertakings under the 1933 agreements as had not been completed by Mar. 31, 1934, and which the province concerned has requested should be so completed. Provision is also made for continued Dominion assistance to construction on the Trans-Canada Highway.

As outlined in the Canada Year Book, 1933, agreements were completed under the provisions of the Relief Act, 1932, with all the provinces except Prince Edward Island, providing for a non-recoverable expenditure of one-third of an amount not to exceed $600 per family for the purpose of providing a measure of relief to self-sustaining families who would otherwise be in receipt of direct relief, by placing such families on the land. It was provided that the remaining two-thirds of the expenditure should be contributed by the province and the municipality concerned. The agreements covered a period of two years and expired on Mar. 31, 1934.

Under the provisions of the Relief Act, 1934, agreements, effective from April, 1934, to Mar. 31, 1936, providing continuity of settlement with the agreements which expired Mar. 31, 1934, were entered into with all the provinces excepting Prince Edward Island and British Columbia. Provision is made in the new agreements for an additional non-recoverable contribution by the Dominion, on the recommendation of the province and with the approval of the Governor in Council, of one-third of an amount not exceeding $100 in the case of a settler who may not be self-supporting at the end of the two-year period, and for whose subsistence expenditure during the third year of settlement is deemed necessary. This additional amount for subsistence during the third year applies where necessary both to those settled under the 1932 agreements and those settled under the 1934 agreements.

Reports received from the provinces indicate that as at Jan. 31, 1935, there have been approved and settled under both the 1932 and 1934 agreements 4,002 settler families, while the total number of individuals settled under the scheme aggregate 21,030.

In the Prairie Provinces the Dominion undertook again to provide for the placement of single homeless unemployed persons on farms and contributed to those provinces in this respect $5 per month for each individual so placed. In addition the Dominion has agreed, under the 1934 Act, to continue contributing to certain special measures in the dried-out areas of the Prairie Provinces.

Continued operation of camps for single homeless persons by the Department of National Defence at various points throughout Canada, also the special relief works carried out in the National Parks by the Department of Interior for the care of single homeless persons and unemployed residents of the parks, are other measures being carried out by the Dominion under the provisions of the Relief Act, 1934.

Table 23 sets forth the Dominion's disbursements under relief legislation from 1930 to Jan. 31, 1935.

23.—Recapitulation of Dominion Disbursements under Relief Legislation as at Jan. 31, 1935.

Subsection 5.—Employment and Unemployment Statistics of the Census.

In the 1933 edition of the Year Book pp. 775-780 were devoted to an examination of the preliminary figures of unemployment as reported at June 1, 1931, for that date and for the preceding twelve months. The final results of this enquiry are available in Vol. 6 of the Census Publications, which may be obtained from the King's Printer, Ottawa, at a price of 75 cents for the paper-bound volume.

Tables **24** and **25**, supplementing information given by provinces at pp. 775-780 of the 1933 Year Book, summarize by industries the statistics of those actually unemployed at the date of the Census, and of time lost during the twelve months preceding that date. It will be noted in Table **25** that the unemployment was most serious in forestry, fishing and trapping, in construction and in the unspecified group, including largely general labourers.

24.—Wage-Earners, 10 Years of Age and Over, and Numbers Not at Work on June 1, 1931, According to Industrial Group and Sex, and Percentages of Total Wage-Earners Not at Work in Each Group.

Section 10.—Old Age Pensions.

The Old Age Pensions Act, 1927.—Legislation respecting Old Age Pensions (R.S.C., 1927, c. 156) was adopted by the Dominion Parliament in 1927. Under the provisions of this statute the Dominion Government reimbursed each province participating in the Dominion scheme to the extent of one-half of the provincial expenditure for old age pensions. An amendment passed at the 1931 session of Parliament (c. 42, Statutes of 1931) provided that the Dominion contribution to the provinces be increased from 50 p.c. to 75 p.c. of the provincial disbursements for old age pensions pursuant to a provincial statute authorizing and providing for the payment of such pensions to the persons and under the conditions specified in the Act and the regulations made thereunder. Following the enactment of the amendment to the Dominion Act, the Dominion Old Age Pensions Regulations were revised and agreements negotiated with the provinces whereby the Dominion contribution of 75 p.c. of provincial disbursements was made effective from Nov. 1, 1931; the provinces have since been reimbursed on this basis.

Sec. 5 of the Act provides that before any such agreement is made with the province, the scheme for the administration of pensions proposed to be adopted by the province shall be approved by the Governor in Council, and that no change in such scheme shall be made without the consent of the Governor in Council.

Sec. 8 reads as follows:—

(1) Provision shall be made for the payment of a pension to every person who, at the date of the roposed commencement of the pension:—
(*a*) is a British subject, or, being a widow, was such before her marriage;
(*b*) has attained the age of seventy years;
(*c*) has resided in Canada for the twenty years immediately preceding the date aforesaid;
(*d*) has resided in the province in which the application for pension is made for the five years immediately preceding the said date;
(*e*) is not an Indian as defined by the Indian Act;
(*f*) is not in receipt of an income of as much as three hundred and sixty-five dollars ($365) a year, and
(*g*) has not made any voluntary assignment or transfer of property for the purpose of qualifying for a pension.
(2) The receipt of a pension shall not by itself constitute a disqualification from voting at any provincial or municipal election.

Sec. 9 provides that the maximum pension payable shall be $240 yearly, subject to reduction by the amount of the income of the pensioner in excess of $125 a year. The pension authority may accept a transfer of the pensioner's interest in a dwelling house in which he resides, in which case the value of the dwelling will not be computed in calculating the amount of pension payable. The pension authority is entitled to recover out of the estate of any deceased pensioner the amount of pension payments with interest at 5 p.c., subject to the limitation that no claims shall be made for such recovery out of any part of the estate which passes by will or intestacy to any other pensioner or to any other person who has contributed, since the grant of the pension or for the last three years during which the pension has been paid, to the pensioner's support.

Secs. 10, 12, 13 and 14 provide for the distribution of the pension burden among the provinces where the pensioner has resided during the 20 years immediately preceding the grant of the pension. Sec. 11 provides for a reduction of pension where a pensioner has resided for a portion of the 20 years in a province with which no agreement is in force. Sec. 15 provides for a suspension of the pension where a pensioner has transferred his residence to some place out of Canada. It is provided by Sec. 16 that a pension shall not be subject to alienation or transfer by the pensioner or to seizure in satisfaction of any claim against him.

The Governor in Council was empowered by Sec. 19 of the Act to make regulations pursuant to this section. Existing regulations were revised and approved by an Order in Council dated Feb. 1, 1932.

During 1933 the provinces of Prince Edward Island and Nova Scotia entered into agreements with the Dominion Government whereby old age pensions became payable in Prince Edward Island as from July 1, 1933, and in Nova Scotia as from Mar. 1, 1934. The Dominion Old Age Pensions Act is now operative in seven of the nine provinces, namely—Alberta, British Columbia, Manitoba, Nova Scotia, Ontario, Prince Edward Island and Saskatchewan, as well as in the Northwest Territories.

The New Brunswick Legislature, at its 1930 session, passed an Old Age Pensions Act, to come into force on a day to be fixed by proclamation. The Gold Commissioner of Yukon was given authority, by a Yukon Territorial Council Ordinance passed in 1927, to enter into an agreement with the Dominion Government for the purpose of obtaining the benefit of the Old Age Pensions Act for residents in the territory. No proposed scheme of administration for adoption in Yukon has been submitted for the approval of the Governor in Council. At present Quebec is the only province which has not enacted old age pensions legislation and, under the terms of the Dominion Act, is therefore ineligible to enter into agreement with the Dominion Government to obtain the benefit of the provisions of the Dominion Act.

Table **26** is a financial summary of old age pensions in Canada as at the end of the calendar year 1934. The total payments in the last quarter of that year were $5,825,099.

26.—Financial Summary of Old Age Pensions in Canada, by Provinces, as at Dec. 31, 1934.

Section 11.—The Co-operative Movement in Canada.

A general article on "The Co-operative Movement in Canada" appeared at pp. 704-720 of the 1925 edition of the Year Book under the three sub-headings of "Consumers' Co-operation", "Co-operative Credit", and "Producers' Co-operation".* Because of the pressure upon space, this article is not reprinted here, but a digest of the latest available material on each of these three sub-divisions of co-operation follows, the presentation of producers' co-operation being confined to that among agricultural producers.

Subsection 1.—Consumers' Co-operation.

The co-operative store was first introduced into Canada by miners who had had experience of co-operation in the United Kingdom. The first co-operative store was opened at Stellarton, N.S., in 1861, and continued to do business until 1916. Many similar ventures were afterwards commenced, but a considerable number failed through their neglect to build up adequate reserve funds. In 1909 the Co-operative Union of Canada was formed, with six affiliated societies and 1,595 members; since October, 1909, it has published a monthly, *The Canadian Co-operator*, from which the following statistics (Table 27) showing the growth of consumers' co-operation in the societies affiliated with the Co-operative Union have been taken.†

*The article referred to above was prepared for the Year Book by Miss Margaret Mackintosh, M.A., of the Department of Labour, Ottawa.

†For details regarding the Co-operative Union of Canada and its activities, see the 1925 Year Book, pp. 708-709.

27.—Statistics of Co-operative Societies Affiliated with the Co-operative Union of Canada, 1909-33.

[1] The decrease in membership is accounted for by the withdrawal of the United Farmers of Canada, Saskatchewan Section, Ltd., and the United Grain Growers, Ltd., the non-inclusion of the latter society being also mainly responsible for the decreases in the figures shown in the remaining columns.

The progress shown by the returns from the societies affiliated with the Co-operative Union does not represent the whole growth of the consumers' co-operative movement in Canada. Although the societies affiliated with the Co-operative Union are among the oldest and best established, there is a larger number of consumers' co-operative societies outside the Union than within it, the great majority of these being in the western provinces. In 1926, the Manitoba Co-operative League was organized to link up the co-operative societies in that province, and a similar organization was formed in Alberta in 1923. In Saskatchewan a conference of representatives of co-operative societies has been held annually since 1923.

Subsection 2.—Co-operative Credit in Quebec.

A form of co-operation which has achieved great success is that which provides short-term credit for small farmers and industrial workers in the province of Quebec. In 1900, what are known as "Les Caisses Populaires", or People's Banks, were begun with the establishment, by the late Alphonse Desjardins, of La Caisse Populaire at Lévis. M. Desjardins adopted the principles of lending money only for approved purposes to carefully selected members in a restricted area, of limited liability, of withdrawable shares of small amount payable by instalments, and of distribution of profits. These banks are for the most part established in agricultural districts. Loans are made to purchase agricultural implements at cash prices, to increase farm live stock, to improve farm buildings, to tide over a period of depression, to pay off a merchant and for various similar purposes. The loans, though comprised within the term "short credit", are for longer periods than are usual in ordinary commercial transactions because agricultural operations necessarily extend over longer periods than those of trade. They may be for 12, 15, or even 24 months, because they must give time for the farmer to realize on his products.

Details of organization may be found in the Statistical Year Book of Quebec, in the 1933 edition of which may be found statistics of the system as a whole, together with complete information of the working of each individual bank, including such details as number of members and depositors, rates of interest paid, loans made and profits realized, classification of size of loans, receipts and expenses and a résumé of chief operations from 1915 to 1932.

Table 28 shows the progress of these banks by quinquennial years from 1915 to 1930 and annually since then.

28.—Progress of Co-operative People's Banks in Quebec, 1915-33.

Subsection 3.—Agricultural Co-operation in Canada in 1933.*

Co-operative organization forms an integral part of the economic fabric of Canadian agriculture. The activities of the larger organizations such as the wheat pools, live-stock and fruit co-operatives have reached a high stage of development, and have received world-wide recognition. In addition to these are hundreds of comparatively small organizations which are working quietly and effectively to serve local areas.

Available statistics show 687 co-operative associations actively engaged in business in 1933. Approximately 100 community halls which were listed in former reports are not included in this summary of farmers' business organizations. The 687 associations have 2,585 branches which combined make a total of 3,272 places of business engaged in the marketing of farm products and the purchase of supplies for farmers. The shareholders and members financially interested number 342,692 and patrons reported total 373,650. Combined assets total $104,232,049 with plant and equipment valued at $37,164,607. The total actual investment of member shareholders in capital stock amounts to $8,686,504 and reserves and surplus total $39,560,830. Sales of farm products for the year under review amounted to $125,126,594. The sales value of supplies handled totalled $7,318,734, and other receipts $131,398, which, combined, means a total business of $132,576,726.

Available records indicate that the most important early activity of farmers in the field of co-operation in Canada was directed toward the marketing of farm products. Such bodies to-day outnumber farmers' purchasing associations by 10 to 1. In comparing the volume of business, marketing associations transact twenty times the business handled by purchasing agencies. Membership in the co-operative marketing associations is given as 292,854 persons compared with 28,266 members in purchasing organizations.

Within the marketing group the grain and seed co-operatives which include the wheat pools of Western Canada have the largest membership and investment, and exceed all other commodity groups in volume of business, which is estimated at $94,912,237 for the year under review. A membership of 169,475 grain growers contributed to this business through 2,146 co-operative marketing agencies. Mainly through deductions from the selling price of their grain, these members have invested a sum of $36,186,498 in their business and in addition have paid up $3,342,929 in share capital. Combined assets total $88,881,252.

Eighty-two dairy co-operatives with 112 depots in Canada reported a membership of 27,499 with assets valued at $3,695,217. Paid-up share capital amounts to $1,674,534 with reserves of $610,455. Sales of dairy products totalled $10,126,259 for the year under review.

---

* Statistics contained in this review are based on records received by the Economics Branch, Department of Agriculture, in 1934, covering the business year of 1933.

The records for 57 live-stock shipping and marketing associations show a combined membership of 40,877. Financing of these associations is mainly by membership fees and commissions. Assets are comparatively low with value of plant and equipment amounting to $567,451. This accommodated a business of $9,044,302. The live-stock co-operatives undertake very little processing of their product. Their main activity is the assembling of live stock in cars at producing points for shipment to central markets.

A large part of the fruit and vegetable crop is marketed through 114 co-operative agencies with a combined membership of 10,875 fruit growers. Assets for all companies total $3,129,724, which are supported by reserves of $700,873. Sales of fruits and vegetables during the year amounted to $6,098,283 which, together with supplies purchased and other receipts, gave a total business of $7,241,931.

Poultry producers have organized in each of the provinces to sell their products co-operatively. There were 25 associations with 196 places of business which reported a membership of 33,479 members. Assets amount to $408,528 with reserves of $165,088. Sales for the year amounted to $2,041,452.

Practically all the wool marketed co-operatively in Canada is handled by the Canadian Co-operative Wool Growers Ltd. The company operates in each province through the medium of 18 sheep-breeders' and wool-growers' associations. The co-operative stores, grades and markets the wool received from its 6,500 patrons. In addition, it carries on advertising and educational work and handles materials and supplies for its members. The quantity of wool handled by the co-operative during the year amounted to 4,240,000 pounds.

In Ontario and Quebec, the honey producers are organized co-operatively with a combined membership of approximately 1,600 members. The Ontario Honey Producers Co-operative Ltd. markets approximately 4 million pounds of honey annually. Three tobacco co-operatives in Ontario, two in the province of Quebec and one in British Columbia report a total membership of 1,009 and sales of approximately a quarter of a million dollars for 1933. The Producteurs de Sucre et Sirop d'Erable de Québec, with a membership of 1,982, is organized on a co-operative basis. During the year under review the sales value of maple products marketed by this association amounted to $287,260.

Available statistics show 327 associations are organized for the purpose of purchasing farm supplies and merchandise on the co-operative plan. These consumer associations, of which over one-half are established in the province of Saskatchewan, have a combined membership of 28,266. The sales value of supplies purchased during the year, by associations organized exclusively for the handling of supplies, amounted to $5,584,675. In five of the provinces co-operative wholesale buying societies purchase goods for their shareholder associations.

For further information see Table 29.

Section 12.—Labour Legislation in Canada in 1933 and 1934.

A summary of labour legislation in force in Canada on Dec. 31, 1928, was given in the Canada Year Book for 1929 at pp. 755-762. The Year Book for each subsequent year contained a summary of the labour laws enacted in the previous year. Labour laws enacted in Canada in 1933 and 1934 are published in the Reports on Labour Legislation in Canada for those years issued by the Department of Labour. A summary of the principal enactments is given below.

Dominion Labour Legislation.—The Relief Act, 1933, empowered the Governor General in Council to enter into agreements with the provinces respecting relief measures; to make loans to, and guarantee payment of money by provinces or public corporations and undertakings; when Parliament is not in session to take the necessary measures to maintain peace, order, and good government and to maintain the credit and financial position of the Dominion or of any province. In particular, the Governor in Council might provide for special relief in the National Parks and elsewhere and assist financially in the sale of primary products. The amount payable for direct relief was limited to $20,000,000 for the year ending Mar. 31, 1934. The Relief Act, 1934, was generally similar to the 1933 Statute but did not provide for defraying the cost of the distribution of natural products. Provision was also made for the payment of the Dominion's proportion of any direct relief accounts in excess of the aforementioned $20,000,000 received subsequent to the expiration of the Act of 1933 on Mar. 31, 1934, and up to July, 1935.

In 1934, Parliament revised the law relating to shipping. The new Canada Shipping Act, which will come into force on Proclamation, incorporates numerous sections of the old Act, the Merchant Shipping Act of the United Kingdom and the Safety of Life at Sea and Load Line Conventions Act, 1931. Sections added to the Canada Shipping Act to put into effect draft conventions of the International Labour Conference have also been included. Among these were sections added in 1933 to implement the draft conventions regarding the protection of workers loading and unloading ships and the marking of the weight on heavy packages. These sections had not been put in force. The draft conventions covering Seamen's Articles of Agreement and the Repatriation of Seamen have been enacted for the first time.

The Technical Education Act, 1934, extends for five years the time within which the unexpended portion of the ten million dollars appropriated under the Act of 1919 may remain available for those provinces which have not yet used up their share of the money.

An amendment to the Criminal Code amends the law on picketing by providing that attending at or near any premises in order merely to obtain or communicate information, shall not be deemed to be watching or besetting within the meaning of the section. This clause was enacted in Canada in 1876, but was omitted from the Criminal Code in 1892.

Provincial Labour Legislation.—Provision for the protection of miners in New Brunswick was made for the first time in 1933 by an amendment to the Mining Act which establishes an eight-hour day for underground workmen and forbids the employment of boys under 16 below ground. A person in charge of a working face must be at least 18 years of age and must have a miner's certificate. Inspection is provided for and regulations may be made for the safety of persons employed.

In Saskatchewan, new safety regulations for coal mines were issued in 1933. In 1934, a Mines Regulation Act was passed relating to other mines including quarries and oil and gas wells.

In 1934 the Industrial Establishments Act of Quebec was amended to cover shops, and the section prohibiting the employment of children under 14 now applies not only to factories and shops but also to theatres, hotels, restaurants, telegraph offices and to messenger services. The normal working day of women and persons under 18 in industrial establishments must now end at 6 p.m. instead of 9 p.m. Hours for women and young persons under 18, in shops in cities and towns of over 10,000 population, may not exceed 60 per week except during the two weeks preceding New Year's Day and when permitted by the inspector. Working hours must fall between 7 a.m. and 11 p.m. except on the days preceding Christmas Day, New Year's Day, and Easter Sunday, when work must cease at 10 p.m. Where the inspector permits overtime in factories or shops, the maximum working hours for women and young persons are 65 instead of 72 as formerly.

The Ontario Factory, Shop and Office Building Act was amended in 1934 to reduce the maximum working week of 60 hours for men in bakeshops to 56 hours. Overtime and Sunday work are restricted. Except by special permit, employees working more than 9 hours during any work period or in any consecutive 24 hours, must be given at least 24 hours rest before resuming work.

The Quebec Hours of Work Act, 1933, authorizes the Lieutenant-Governor in Council to fix hours for workers in industries not subject to competition from other countries or provinces. Working hours may not be less than 6 per day or 33 per week, so that as far as possible work may be assured for two or more shifts. Exemptions may be allowed for preparatory, complementary or urgent work. Two orders have been issued under the Act fixing a 40-hour week or two shifts of 36 hours each for the building trades in the Montreal and Quebec districts and in the Eastern Townships.

The British Columbia Hours of Work Act, 1934, which came into force on June 14, 1934, revises a somewhat similar statute of 1933. The new law, like the Female Minimum Wage Act, 1934, is administered by the Board of Industrial Relations appointed under the Male Minimum Wage Act. The Act, like its predecessor, provides for an 8-hour day and 48-hour week in industrial undertakings, and empowers the Lieutenant-Governor in Council to add to or withdraw from the Act the whole or any branch of any industry, trade or occupation.

Under a 1934 amendment to the Saskatchewan Fire Departments Two-Platoon Act, a weekly rest of 24 hours may be given to fire department employees in cities of 10,000 or more, if a by-law to that effect is approved by the electors.

In Manitoba the One Day's Rest in Seven Act was amended in 1934 to apply to all hotels and restaurants.

The Public Vehicle Act of Prince Edward Island was amended in 1933 to forbid drivers of commercial vehicles being employed as such for more than 10 hours in 24.

Amendments to the Manitoba Fair Wage Act of 1916 widen the scope of the Act to include not only provincial public works but also private building and construction work of more than $100 value in towns with a population exceeding 2,000. Work done by an owner or tenant, if not with a view to sale or rental, is not within the scope of the Act. The Lieutenant-Governor in Council may extend the territory to which the Act applies.

A new Male Minimum Wage Act was passed in British Columbia in 1934 to apply to adult male employees in any industry or occupation except farm labourers and domestic servants. The Act, which provides for a Board of Industrial Relations, is drafted along the lines of the Women's Minimum Wage Acts of the various provinces and empowers the Board to fix minimum wages, with special provision for certain classes of employees, such as young or handicapped workers.

A new British Columbia Female Minimum Wage Act replaces the Act of 1918 and is administered by the Board of Industrial Relations. A new clause stipulates that, where a minimum wage has been fixed for female employees, no person may employ, on work usually done by such employees, any male person over 18 years of age at a wage less than the fixed minimum, except male apprentices whose indentures have been approved by the Board; nor may boys under 18 be employed at such work at less wages.

The Women's Minimum Wage Act of Quebec was amended in 1933 to provide that employers might be required by Order in Council to keep registers of the names, ages and places of residence of their female employees and information as to their wages and working hours. An Order in Council of this sort was issued during the year. In 1934, the Act was amended to prohibit any male worker being employed on work ordinarily performed by women at a less wage than that fixed for the female employees.

The Ontario Minimum Wage Act was amended in 1934 to provide that where a minimum wage is established, the number of hours per week for which such wage is paid may not exceed 48 in municipalities with a population of over 50,000 or 50 in municipalities of from 10,000 to 50,000, or 54 in other municipalities. If the prevailing weekly hours in any industry or employment are less than the above hours, the former are to be considered the maximum for which the minimum wage shall be paid. Where a male employee replaces a female at any class of work for which a minimum wage is established, he must be paid not less than the minimum.

A 1933 amendment to the Manitoba Minimum Wage Act forbids any person over 18 years of age being employed in any class of employment at a lower rate than the minimum, if any, established for boys under 18. In 1934 the Act was amended to include male employees as well as women and boys. The Act or regulations may be extended by Order in Council to industries not expressly provided for by the Act. Where the regulations fix a minimum wage in any class of industry, no person of 18 years or over may be employed at less than 25 cents per hour unless the Minimum Wage Board has provided for a different rate.

In 1934, the Saskatchewan Minimum Wage Act was amended to provide that, with the approval of the Lieutenant-Governor in Council, the Minimum Wage Board may apply the Act to male employees in any shop or factory which the Act covers.

In 1934, laws were enacted in Quebec, New Brunswick and Ontario to regulate labour conditions in the lumbering industry. The New Brunswick Forest Operations Commission Act provides for a commission with power to fix minimum wages yearly and on the application of an employer or of not less than five employees to hear disputes as to wages and board, store charges and living conditions in the lumber camps. Recommendations of the Commission, if approved by the Minister, must be carried out by the parties to the dispute, failure to do so constituting an offence against the Act.

The Quebec Forest Operations Commission Act provides for a commission to which every timber-limit holder, before commencing operations, must submit details concerning wages, hours of labour, sanitary conditions, terms of hiring, food supplies and prices charged therefor, living accommodation, deductions from wages for medical and other services, fines and any other information required. The Commission may conduct investigations and make inspections. A statement of the wages to be paid must be posted at the camp and any employee paid lower wages may claim the difference before a court.

Under the Ontario Woodmen's Employment Act, an inspector may be appointed to investigate working and living conditions in lumber camps. The operators are to be held responsible for conditions whether they have let contracts for certain work or not.

The Quebec Collective Labour Agreements Extension Act, 1934, empowers the Lieutenant-Governor in Council, on the recommendation of the Minister of Labour, to extend the terms of a collective agreement as to wages and hours between one or more employers and one or more trade unions so as to bind all employers and employees in the same trade or industry in a specified district. On petition for its extension by one of the parties to an agreement, the Minister must give thirty days notice of the petition in the *Quebec Official Gazette*. If there is no valid objection, and if he deems the agreement to have a preponderant importance and significance for the establishment of conditions of labour in the industry in the region concerned, he may recommend, to the Lieutenant-Governor in Council, its extension. An agreement thus made obligatory governs all individual labour contracts in the industry but if an individual contract is more to the advantage of the employed it is to have effect unless prohibited by the collective agreement. The Lieutenant-Governor in Council may refuse to apply the provisions of the Act to any industry liable in his opinion to suffer from the competition of foreign countries or other provinces. Nothing in the Act may be deemed to compel an employer or employee to become or not to become a member of an association of his industry or trade.

The Quebec Workmen's Compensation Act was amended in 1933 to prohibit compensation being paid for the first seven days of disability unless it continues for at least three weeks. The minimum weekly payment to a widow or invalid widower with one or more children was reduced from $12.50 to $10 and the same reduction was made in the minimum compensation for total disability. Diseases due to mining and quarrying operations were deleted from the schedule of compensable diseases, *viz.*, ankylostomiasis, miners' phthisis, stone workers' or grinders' phthisis, silicosis and pneumoconiosis. The Quebec Silicosis Act, 1931, and the sections on silicosis added to the Mining Act in the same year were repealed in 1933.

Amendments of 1933 to the Workmen's Compensation Act of Ontario authorized the Workmen's Compensation Board to lower the assessment of any employer who reduced the accident hazard to a minimum by installing safety devices and whose accident record has been good. Workmen disabled from silicosis are to be compensated on the same basis as workmen suffering from other industrial diseases, but where silicosis is complicated with tuberculosis the basis of compensation for total disability is now fixed at 50 p.c. instead of 66⅔ p.c. of average earnings.

In 1934, dermatitis (venenata) due to employment in any process involving the use of acids and alkalies or acids and oils, was added to the schedule of compensable industrial diseases in the Saskatchewan Workmen's Compensation (Accident Fund) Act.

The Nova Scotia Workmen's Compensation Act was amended in 1934 to require that, in reckoning compensation in disability cases, average earnings may not be rated below $10 per week where the workman's weekly wages would have amounted to at least $10 if he had worked six days a week. Medical aid is not to be supplied for more than 30 days during a period of 60 days from the date of disability. Formerly, the workman was entitled to medical aid only during the period of 30 days from the date of disability.

During the period under review all the provinces except Nova Scotia and Prince Edward Island made statutory provision for continued co-operation with the Dominion Government in dealing with unemployment. In Nova Scotia and Prince Edward Island, laws enacted in 1931 continued to be effective for that purpose.

An amendment of 1933 to the British Columbia Forest Act authorized the Minister of Lands, as from Nov. 1, 1932, to grant to any municipality or organization charged with the care of unemployed or needy persons a permit entitling the holder to cut timber free of stumpage or royalty to be sold as cordwood, on condition that only persons who are unemployed and in need of relief shall be employed in the cutting and that the proceeds of the sale shall be used for unemployment relief.

Designed first to provide only for the settlement of unemployed coal miners on the land, the Nova Scotia Miners' Land Settlement Act, 1932, now the Nova Scotia Land Settlement Act, was extended in 1933 to unemployed persons who have been engaged in manufacturing or transportation. The Land Settlement Board is given power to provide for the training and re-establishment of the unemployed and their dependants and to aid in settling suitable men on farms.

In Quebec, Ontario, Saskatchewan and British Columbia, legislation enacted in 1933 ratifies agreements between the Government of Canada and the Governments of these provinces for the relief of selected families by placing them on suitable farms. One-third of the expense, not to exceed $600 per family, is to be borne by the Dominion Government, the remainder by the province and the participating municipalities in the proportions agreed upon between them.

The Alberta Department of Trade and Industry Act, 1934, which came into force on Oct. 18, 1934, provides for a Department of the Government to inquire into conditions in any trade or industry which appear to be detrimental to the trade or the public; to promote conferences of those engaged or employed in any such trade so as to remedy harmful conditions; to promote trade associations for the same purpose and to collect information regarding the various trades of the province and its resources. The Act applies to wholesale and retail dealers, druggists, printers, restaurant keepers, dry cleaners, barbers, hairdressers, and plumbing, heating and sanitary engineers. Other trades may be brought under the Act by Order in Council on petition to that effect. Provision is made for the formulating of codes, setting up standards of ethics and practices, including standards of minimum wages and hours of labour, for any trade which, if approved by 66 p.c. of the persons engaged in, or by persons holding 66 p.c. of the capital invested in that trade, may be made binding on all persons carrying on the trade. If the representatives of a trade fail to agree on a code or if a code is not approved as required, the Minister, with the assistance of an advisory Board, may draw up a code which may be made binding on all persons engaged in the trade by Order in Council. Inquiries may be made into wages and conferences arranged between

employers and employees for the purpose of effecting an agreement as to minimum wages in any trade for which a code is proposed. If no agreement is reached, the Lieutenant-Governor in Council may fix a minimum wage for any class of employees in any district. An employer may not interfere with the free selection of representatives by any association or in any lawful activity of such association. Part III of the Act, which deals with coal mining and distribution, declares invalid any agreement as to wages whereby the remuneration of any person depends on the profits of the industry, unless the agreement is approved by the Minister.

Section 13.—Legislation Respecting Combinations in Restraint of Trade.

A general article on Canadian legislation concerning trade combinations and monopolies against the public interest will be found at pp. 765-770 of the 1927-28 Year Book under the heading "Legislation Respecting Combinations in Restraint of Trade". The article outlines the provisions of the Combines Investigation Act and reviews the principal cases dealt with under the Act up to Mar. 31, 1927. A brief statement of the provisions against combines as contained in the Criminal Code,* the Customs Tariff,† the Excise Act‡ and the Patent Act§ is included. A further section of the article summarizes former Canadian legislation for the investigation of combines, including the Combines Investigation Act of 1910 and the Combines and Fair Prices Act of 1919.

The Combines Investigation Act.—The Combines Investigation Act (R.S.C., 1927, c. 26) is designed, as its full title indicates, "to provide for the investigation of combines, monopolies, trusts and mergers", and declares to be unlawful only such combines as "have operated or are likely to operate to the detriment or against the interest of the public, whether consumers, producers or others". The statute provides that an inquiry shall be made by the Registrar on receipt of an application signed by any six British subjects resident in Canada, or if the Registrar has reason to believe that a combine exists, or if the Minister of Labour so directs. If after preliminary inquiry sufficient evidence is disclosed to justify further investigation, this may be conducted by the Registrar or by a special Commissioner appointed by the Governor in Council. Full authority is given the Registrar or the Commissioner to examine witnesses on oath and compel the production of records and documents.

The remedies provided by the Act are those of publicity and penalty. The proceedings are conducted in private, unless otherwise ordered by the Minister, but the report of any commissioner is required to be published within fifteen days of its receipt by the Minister. Whenever in the opinion of the Minister an offence has been committed, he may remit the report and the evidence to the Attorney General of the province concerned. The penalty section of the statute provides that any person who is a party or privy to, or knowingly assists in, the formation or operation of a combine is guilty of an indictable offence and liable to a penalty not exceeding $10,000 or to two years imprisonment, or, if a corporation, to a fine not exceeding $25,000. Provision is also made in the Act for the reduction

* R.S.C., 1927, c. 146, ss. 496-498.
† R.S.C., 1927, c. 44, s. 15.
‡ R.S.C., 1927, c. 60, s. 27.
§ R.S.C., 1927, c. 150, s. 40.

or removal of the customs duty on any article of commerce, among the manufacturers or dealers in which there exists a combine, the operation of which is facilitated by the tariff. Similarly, the Exchequer Court may revoke a patent if there is evidence to show that the holder of such patent has made use of his exclusive rights to limit production or competition unduly, to enhance prices unreasonably, or to restrain or injure trade.

The constitutional validity of the Combines Investigation Act was given final confirmation by the Judicial Committee of the Privy Council in a decision delivered in January, 1931. This judgment confirmed the unanimous decision of the Supreme Court of Canada, given in April, 1929, after a reference for determination of this question had been made to the Court by the Dominion Government. Both courts upheld also the constitutional validity of Section 498 of the Criminal Code, relating to combinations in restraint of trade.

Combine Cases in 1933.—Members of a combine found to exist among manufacturers of baskets and other wood-veneer containers for fruits, vegetables and meats were indicted at Hamilton and pleaded guilty in January, 1933. The accused were fined $100 each.

An extensive investigation into an alleged combine of importers of British anthracite coal was completed by the Registrar early in 1933. Some seventy witnesses were examined in hearings held at Montreal, Quebec, Toronto and Ottawa. The evidence and report of this investigation were remitted to the Attorney General of Quebec, who instituted prosecutions under the Act against the leading importers. In December, 1933, five firms were convicted and sentenced to pay fines totalling $30,000. An appeal from this judgment was heard in 1934 and was followed by prosecutions of a second group of importers.

An inquiry into an alleged combine of buyers of Ontario flue-cured tobacco was concluded in 1933 and was made public in the early part of 1934. The investigation related principally to allegations that agreements among buyers had prevented competitive bidding and had caused prices paid to growers to be unreasonably low. No arrangement among buyers in contravention of the Act was found, although it was indicated that growers were found to be at a serious disadvantage in bargaining with the buyers of their product.

The annual report of the Registrar of the Combines Investigation Act, dealing at greater length with the above subjects and referring also to other inquiries, is published as a section of the Annual Report of the Department of Labour.

Section 14.—Mothers' Allowances.

Six of the nine provinces of Canada provide for the payment of allowances to mothers who are widowed or without adequate means of support. The province of Manitoba was the first to make such provision in 1916, and the example has been followed by the other western provinces and by Ontario and Nova Scotia. The Mothers' Allowances Act, 1930, of New Brunswick has not been proclaimed in effect.

All the mothers' allowances acts stipulate that the mother must be a resident of the province at the time of making application and a widow or, in all the pro-

vinces but New Brunswick and Nova Scotia, a wife, whose husband is physically or mentally incapacitated. The section in the Alberta Act bringing the wife of a physically disabled man within its scope has, however, not been proclaimed.

In British Columbia, Ontario and Saskatchewan, deserted wives are paid an allowance, and in British Columbia and Saskatchewan, the wives of inmates of penal institutions are eligible. Under all the statutes except those of Alberta and Saskatchewan, the mother must be a British subject or the widow or wife of a British subject. Allowances may be paid to a foster-mother under certain conditions in all the provinces but Alberta.

In New Brunswick, Nova Scotia and Ontario, allowances are payable in respect of two or more dependent children, but in Ontario, in special cases, an allowance may be paid for one child and in New Brunswick and Nova Scotia, an allowance is payable for one child under 16 if there is an invalid child over 16 years of age. In the other provinces, allowances are payable in respect of one or more dependent children, but in Manitoba, under the regulations, no allowance is payable in respect of an only child or an only child under 15 years of age unless the mother is temporarily or permanently unable to care for the child. A dependent child is a child under 16 years of age in British Columbia, New Brunswick, Nova Scotia, Ontario and Saskatchewan. In Alberta, a boy under 14 or a girl under 15 is deemed to be dependent. In Manitoba, only children under 15 are regarded as dependent unless they are invalids.

In Alberta, British Columbia, Manitoba and Ontario, the cost of the allowances is divided between the province and the municipalities concerned. In Ontario, however, the Provincial Treasury bears the whole cost of allowances payable to persons resident in the provisional judicial districts (northern Ontario) of the province and not in cities. In Saskatchewan, New Brunswick and Nova Scotia, the whole cost is carried by the province.

Rates of Allowances.—In British Columbia, the Act provides for a maximum monthly allowance of $42.50 for a dependent mother with one child, and an additional $7.50 for each other child under 16 years of age. In New Brunswick and Nova Scotia, a maximum allowance of $60 per month is fixed by statute. In the other provinces, the provincial authority administering the Act has power to fix the rate of the allowance. In Ontario, the maximum for a mother and two children is $40 in a city, $35 in a town and $30 in a rural district, with an additional $5 for every child above two in each case up to a maximum allowance for a family of $80 per month. In Saskatchewan, minimum and maximum monthly payments of $8 and $30 were established by Order in Council in 1931.

In Manitoba, the maximum allowance for a mother and two children is $50 with a maximum of $89 for a family of seven or more children. In Alberta, a mother of a single child is granted not more than $20 a month and a mother of one child under the stipulated age is given a maximum allowance of $25. On this basis, adjustments are made for other cases.

The statement below shows the expenditure on mothers' allowances in the provincial fiscal years ended 1933.

MOTHERS' ALLOWANCES IN CANADA, PROVINCIAL FISCAL YEARS ENDED 1933.

Province.	Number Assisted.		Benefits Paid.
	Families.	Children.

PART II.—WAGES AND COST OF LIVING.

Section 1.—Wage Rates.*

Statistics of rates of wages and hours of labour have been collected for recent years by the Dominion Department of Labour, and are published in a series of bulletins supplementary to the *Labour Gazette*. Report No. 1 of this series was issued in March, 1921. The records upon which the statistics are based begin in most cases with the year 1901. Index numbers have been calculated to show the general movement of wage rates; the series covers six groups of occupations back to 1901, and common factory labour, miscellaneous factory trades and lumbering back to 1911. The index numbers are based upon wage rates in 1913 as 100.

The accompanying table of index numbers (Table **1**) shows the relative changes from year to year. A downward movement appeared in most of the groups in 1921 and 1922, after the peak had been reached in 1920. The index numbers for 1923 and 1924 showed on the whole a slightly upward trend, but while there were slight increases during 1925 in some groups, a substantial decline in coal miners' wages reduced the average. In 1926 slight increases took place in the wages paid by the building, metal and printing trades, electric railways and factory trades. In 1927 general increases took place in all the six groups included in the average, as well as in the other three groups; wage increases in the building trades and on the steam railways were the outstanding features of the year. In 1928, except steam railways which was stationary and common factory labour which declined fractionally, all groups showed an upward movement, a substantial increase appearing in building trades. In 1929 all groups except coal mining were higher, the building trades showing the greatest increase. In 1930 building trades showed a substantial increase, lumbering a decrease and other groups fractional increases. In 1931 all groups

*See pp. 774-783 of the 1927-28 Year Book for an article on the "Wages Statistics of the Census of 1921" and pp. 797-799 of the 1933 Year Book for "Earnings in the Census Year 1931".

were down except printing which showed a slight advance and coal mining which was unchanged. In 1932 all groups were down, the decreases being greatest in lumbering, building trades and steam railways. In 1933 all groups were down substantially, but in 1934 increases appeared in coal mining, factory labour and lumbering, with decreases in the other groups.

Rates of wages and hours of labour in 1934 in various trades in the largest cities of the five economic areas of Canada will be found in Table 2. The attention of those specially interested in the subject of wages and hours is directed to the valuable detailed study, "Wages and Hours of Labour in Canada, 1929, 1933 and 1934", published by the Department of Labour as a supplement to the *Labour Gazette*, January, 1935.

1.—Index Numbers of Rates of Wages for Various Classes of Labour in Canada, 1913-34.

NOTE.—Rates of wages in 1913=100. Index numbers for 1901-12 were given at p. 674 of the 1932 Year Book.

[1]For statistics of the wages and hours of employees of steam railways and wages of employees in and about coal mines in Canada, see pp. 751-752 of the 1930 Year Book, where the rates, etc., for the past seven or eight years to 1929, are given. Except for a 10 p.c. reduction in Nova Scotia in coal mines in 1932, these rates were unchanged down to December, 1932. In editions of the Year Book prior to 1933 a table showing the wages and hours of common labour in factories for certain cities has also been given in this section. This has been omitted to conserve space, but the information can be found at p. 41 of "Wages and Hours of Labour in Canada", published as a supplement to the *Labour Gazette* for January, 1935. For the five cities of Table 2 it is included under sub-heading 3 of the stub.

[2]Final maximum rate after annual increase; one-man cars at Halifax. [3]One day off if possible.

Section 2.—Wages and Hours of Labour under Provincial Minimum Wage Legislation.

Seven of the provinces of Canada have in effect legislation providing for minimum wages for female employees in certain industries and occupations through boards or commissions which establish and enforce the minimum rates, and there is also legislation for the restriction of hours of labour. In Alberta, Manitoba, Ontario and Quebec the minimum rates for female employees are applicable to

males in certain respects. Minimum wage legislation for female employees became effective in the various provinces as follows: British Columbia and Manitoba in 1918; Saskatchewan in 1919; Alberta and Ontario in 1920; Quebec in 1926, the statute having been passed in 1919; Nova Scotia in 1930, the statute having been passed in 1920. In New Brunswick a statute was passed in 1930 to come into force on proclamation but has not yet been proclaimed.

Hours of labour are regulated in some of the provinces by the Minimum Wage Boards and in others under the factory acts, etc.

Minimum wage rates for males separately had been established prior to 1934 to a slight extent only in British Columbia since 1925, and in Manitoba since 1931. During 1934, however, provision was made for this and rates were established for comparatively large numbers of male workers in British Columbia, Manitoba, Quebec and New Brunswick. A supplement to the *Labour Gazette* for January, 1935, on Wages and Hours of Labour in Canada 1929, 1933 and 1934 contains an appendix giving information as to minimum wages for males as well as for females in some detail.

Information as to minimum wage rates on Dominion Government contracts for the manufacture and supply of equipment, stores, etc., appears in the paragraphs on Fair Wages in the section on the Dominion Department of Labour at pp. 804-805.

Subsection 1.—Minimum Wages for Females.

The accompanying table gives information as to minimum rates of wages and as to hours under the orders of the various boards and commissions in effect at the end of 1934.

The information here given is intended to afford merely a statistical summary of the minimum wages and restricted hours of labour in the provinces and industries affected, and while some of the more significant details have been given in footnotes, it has been found impossible to include the information in such form as to indicate any more than the general conditions under these provisions.

For complete information it is necessary to refer to the orders as issued by the various provincial boards. These have been given in summary form in the *Labour Gazette* from time to time as issued. In some provinces these orders include regulations as to employment conditions, sanitary conditions, etc. The boards have power to issue licences for lower rates of pay for handicapped workers and to meet special conditions in the nature of emergencies.

In this table the figures for adult learners and for minors and apprentices are shown in a range covering both classes. There is considerable variation in the rates for such classes in the various industries and the time allowed for such periods varies considerably, from a few weeks to two years and upwards. The number of learners and apprentices is usually restricted to 25 p.c. of the employees.

The hours of labour shown in Table 3 are those for which the minimum rates are payable, or the maximum hours of work (except under special conditions, provision for overtime pay, etc.) established by the minimum wage boards or provided for under other legislation, such as factory acts.

3.—Minimum Wage Rates for Female Employees in Canada Under

NOTE.—The regulations governing hours of work in the various provinces are as follows: *Nova Scotia*, Hours for which minimum rates payable to be not less than 44 or more than 50 per week; *Quebec*, Rates payable in printing, etc., and in textile trades for recognized regular working period up to 55 hours; in stores hours usually worked if less than prescribed in orders; *Ontario*, Rates payable for hours stated in orders or

[1]According to locality and population.

[2]According to locality, population and industry; the higher rates apply in Montreal and district.

[3]All rates according to locality and population.

[4]Rates generally apply throughout province. "Brickyards and Seasonal and Casual Employment in Industries not covered by other Regulations"—$12.00 per week of 48 hours or 30 cents an hour for all employees. An Order in Council published Nov. 24, 1934, and effective one month later makes it obligatory on all employers of workers over 18 years, except farm and private domestic workers, to pay a wage of $12.00 per week of 48 hours, or 25 cents per hour, in any city and certain named municipalities adjacent to Winnipeg, and in any summer resort during June, July, August and September; and $10.00 per week or 21 cents per hour elsewhere in the province (unless lower rate permitted by regulations or exemption under the Act).

[5]Cities only, but Board may extend any order to every part of province. On Jan. 11, 1935, experienced rates reduced by $1.00 per week except mail-order houses where reduction was 50 cents (minors and learners rates decreased in some cases).

[6]Apply to centres with more than 600 population, and to Banff, Lake Louise, Waterton Lakes Park and Jasper, except in "canning, etc." where rates given apply throughout province.

[7]Rates apply throughout the province; provision also made for Washing, Curing, Packing, etc. (except Canning) of Fish" as follows: experienced—$15.50 per week (48 hours) or 32½ cents per hour; minors, learners, etc.—$12.75–$14.75 per week.

[8]Per hour.

[9]Or 25 to 30 cents per hour.

[10]"Custom Millinery Trades" not in factories: minors, learners, etc.—$5.00-$10.00 per week.

[11]These rates apply to all elevator operators.

[12]"Tailoring and Millinery Establishments", minors, learners, etc.—$5.00-$10.00 per week; in bag factories experienced adults for some work, $11.00 per week.

Orders of Provincial Minimum Wage Boards, as at Dec. 31, 1934.

for hours normally worked if less than prescribed in orders; *Manitoba*, 50 hours in tailoring, millinery, paint, broom and seed packing establishments; *Saskatchewan*, In case of retail stores hours may be increased to 56 per week between Dec. 15 and Dec. 31; *Alberta*, 48 per week except in retail stores where 52 hours apply, and in hotels, restaurants, etc., where 56 hours apply; *British Columbia*, Hours of Work Act.

[13]Winnipeg and St. Boniface only.

[14]Higher rates apply to Winnipeg and district and to summer resorts during June, July, August and September. Part-time rates: experienced—25 cents per hour; inexperienced 20 cents per hour.

[15]Or 35 cents per hour, Winnipeg, St. Boniface and St. James only; no minors to be employed.

[16]For 7-day week: experienced—$14.50; apprentices—$10.50-$13.00.

[17]Winnipeg, St. Boniface and St. James only.

[18]Millinery shops—$4.00-$10.00.

[19]Ushers in theatres, motion picture houses and music halls, cloakroom attendants in cabarets and dance halls, if working 28 hours to 48 hours per week $14.00; hourly rate 50 cents.

[20]"Personal Services" order includes also garages and operation of elevators.

[21]"Public Housekeeping" order includes chambermaids in lodging houses, elevator operators, also janitresses except in apartment buildings of less than 12 suites.

[22]Ushers in theatres, music halls, lecture halls, etc., $14.25 for 36 to 48 hours per week, $10.80 for 18 to 36 hours.

[23]"Personal Services" includes, also, attendants at garages and service stations, drivers of motor cars and other vehicles.

[24]"Telephone and Telegraph".

[25]$12.50 in Toronto; $12.00 in Ottawa, Hamilton, London, Windsor; shoeshine parlours in Toronto, $12.50, 50 hours.

[26]In some industries, instead of a graduated scale of wages according to experience, stipulated percentages of the female workers in each establishment must receive the full minimum rate while the remainder may work at lower minimum rates provided.

Subsection 2.—Minimum Wages for Male Employees.

In Quebec, Ontario, Manitoba, Alberta and British Columbia, the minimum wage legislation provides that in certain respects males may not be employed at rates lower than the minimum rates set for females, as set forth in the section on labour legislation. In the following provinces other provisions for minimum wage rates for males have been made.

During 1934, under new legislation, minimum wages for males have been established in various provinces to some extent, and the previous legislation in British Columbia has been amplified. Information on this appears in the section on labour legislation on pp. 844-849.

In New Brunswick, in October, 1934, under the authority of the Forest Operations and Commission Act, the Commission fixed a minimum wage in lumbering of $32 per month and board, net, or its equivalent in case of piecework, except in booming and sorting for which the minimum rate was set at 20 cents per hour, net.

In Quebec, under the Forest Operations Commission Act, 1934, all holders of licences to cut timber on public lands, or contractors, must submit a report on wages, hours, supplies, etc. The Commission has issued regulations recommending that at least $30 net per month should be paid, or its equivalent in case of piecework.

Under the Quebec Collective Agreements Extension Act (section on labour legislation), the wages and hours in agreements have been extended and made compulsory for all employees as follows: in the industries and districts covered by the building trades in various parts of the province; granite and stone quarrying throughout the province; bakeries in Three Rivers; fur workers, Montreal and district; longshoremen, Montreal; and shoe manufacturing throughout the province. Particulars have been given in various issues of the *Labour Gazette* during 1934, and in a supplement to the *Labour Gazette* for January, 1935. Since that time an agreement for the mens and boys clothing industry throughout the province has been similarly extended, (see *Labour Gazette*, March, 1935).

In Manitoba minimum rates at $8 per week for the first six months, $9 for the second six months and $10 after the first year have been set for boys under 18 years of age in Winnipeg and district and in Brandon, in manufacturing industries, in garages and gasolene filling stations and in retail stores; also for Winnipeg and district only in laundries, etc., in hotels and restaurants, etc. For messenger boys and bell boys $8 per week was set, part-time work at 15 cents per hour. Minimum rates for men, over 18 years, at $12 per week, or 25 cents per hour, in Winnipeg and district and $10 per week, or 21 cents per hour, elsewhere, were set up for hotels, restaurants, etc., and in November, 1934, these rates were extended to men in any industry not already covered except farming, market gardening and domestic service. All rates are on the basis of the 48-hour week, with restrictions as to overtime.

The Fair Wages Act of Manitoba, 1916, as amended in 1934, provides for the observance of the schedules of wages and hours established for Provincial Government contracts on private contracts for building, repairs, etc., in the Greater Winnipeg Water District or any city or town having a population of over 2,000.

In British Columbia minimum rates have been established under the new Male Minimum Wage Act, 1934, in logging, sawmilling and woodworking, at 35 cents, 37½ and 40 cents per hour, varying according to class of work and locality; in construction at 45 cents in cities and 40 cents elsewhere; in baking, mercantile establishments and barbering at 40 cents, all on the basis of the 8-hour day and 48-hour week, with certain exceptions and special provisions.

Section 3.—Cost of Living of Wage Earners.

An index number of the cost of living in working-men's families has been computed by the Department of Labour since 1913, and is published monthly in the *Labour Gazette*. This index is specifically designed for the purpose of measuring the trends of the cost of living for certain wage-earning classes with a somewhat lower standard of living than that which is measured by the Bureau of Statistics index number of retail prices, shown on pp. 869-873 of the present volume. The former wage-earners index is used extensively in negotiations as to wage rates and in the settlement of industrial disputes. An abridgment of this index is presented in Table 4.

4.—Changes in the Cost of Living in Canada from 1914 to 1934.[1]

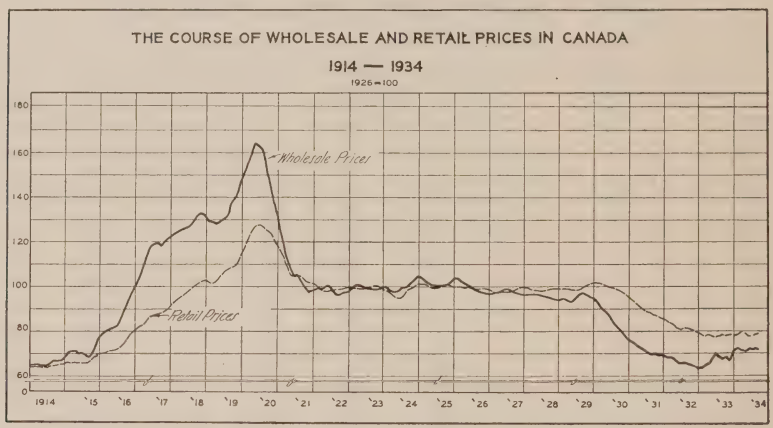
Dec. 1934	103	144	129	115	154	123



[1] The figures for "all items" were calculated by giving the following weights to each group: Food 35 p.c.; Fuel 8 p.c.; Rent 18½ p.c.; Clothing 18½ p.c.; and Sundries 20 p.c.

Section 4.—Earnings in the Census Year, 1931.

The total number of wage earners in Canada reporting earnings for the census year ended June 1, 1931, was 2,477,038 or 96·53 p.c. of all wage-earners and the total amount of their earnings was $2,102,877,400. Of this number 1,948,500 were males and their earnings amounted to $1,806,633,400 or 85·91 p.c. of the total earnings. Females reporting earnings numbered 528,538 and the total amount of their earnings was $296,244,000 or 14·09 p.c. of total earnings. The total weeks worked by wage-earners reporting earnings was 104,947,274. The number of weeks worked by the males was 80,322,382 or 76·54 p.c. of the total for both sexes, and the total for the females was 24,624,892 weeks or 23·46 p.c. of the grand total. A table showing earnings and weeks worked by wage-earners in the various industrial groups appeared at pp. 798-799 of the 1933 Year Book.

CHAPTER XX. PRICES.*

Commodity prices fall into two main divisions—wholesale prices and retail prices. The number of wholesale traders is smaller than that of retail traders, buying and selling by carefully defined grades more prevalent, and prices ranges at any particular time and place much narrower. Wholesale transactions are generally between expert buyers and sellers, dealing on purely business principles. Accordingly, wholesale prices conform approximately to the operation of the principle of supply and demand, and are thus more valuable as an index to the current state of business. Retail prices, on the other hand, are governed to some extent by custom and do not always respond readily to fluctuations in wholesale prices.

Further, there exists what is technically called a "lag" between wholesale and retail prices, the latter not showing changes in fundamental business conditions until a month or two after wholesale prices. Thus, while wholesale prices in Canada reached a peak in May, 1920, and commenced to decline in June, retail prices reached their corresponding peak in July, 1920, and began to decline in August. A similar "lag" has been noted in recent years, as indicated by the above chart showing the course of wholesale and retail prices in Canada from 1914 to 1934.

Retail prices find one of their chief uses in the measurement of changes in the cost of living. This measurement is complicated by such changing factors as consumption, habits and standards of living, and qualitative changes in commodities included in the budget.

Section 1.—Wholesale Prices of Commodities.

Subsection 1.—Historical Review of Canadian Prices.

Until recently the index number of wholesale prices in Canada did not go back beyond 1890. However, it has now been extended backward to 1867 on the 1913 base, the added quarter of a century including a very interesting period to students of price statistics. The average index numbers for every year since

*Revised by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics. This Branch compiles and publishes statistics on: Prices (wholesale, retail, securities, services, exchange, interest rates, cost of living), Retail and Wholesale Trade, Foreign Capital Investments in Canada and Canadian Investments Abroad, Balance of International Payments, and other related subjects. For a complete list of the publications of this Branch, the reader is referred to Chapter XXIX, Section I, under "Internal Trade".

Confederation are given in Table 1. In that table will be noted the high prices of 1867, immediately following the close of the American Civil War and the Austro-Prussian War of 1866, and the tendency to declining prices in the years immediately following. Prices went up again after the Franco-German War of 1871 and reached a high point in 1872 and 1873, but the crisis of the latter year resulted in a decline. A downward trend persisted fairly steadily throughout the 25 years from 1872 to 1897 and was featured by an inadequate increase in the supply of gold. The gold supply of the world did not increase as rapidly as the supply of commodities, consequently more commodities could be secured for a given amount of gold. This gold shortage was accentuated by the demonetization of silver which ceased to be legal tender with gold and was reduced to the level of token money by the chief nations. Relief came through the discoveries of gold in the Rand mines and the application of the cyanide process to low-grade ores. The result was a rapidly increasing world production of gold from about 1890 down to the outbreak of the Great War, with consequent rising general prices as soon as the volume of the new gold became a large part of the total stock. Thus prices increased from the low point of 75·6 in 1897 to 100 in 1913 and 102·3 in 1914. Afterwards, the Great War, both through the scarcity of commodities which it occasioned and the inflation of the currency which it produced, drove prices rapidly upward to a maximum of 243·5 in 1920, followed by a rapid collapse to 152·0 in 1922. This was succeeded by a slight increase to 160·3 in 1925. The tendency from 1925 to 1929 was downward, although the period was one of increasing prosperity—a condition normally associated with rising prices.

[1] Subject to revision.

Commencing in the fall of 1929, a severe economic depression set in, which was accompanied by a drastic decline in wholesale prices. Its extent may be gauged from the drop of the wholesale price index from 153·7 in August, 1929, to 99·2 in February, 1933. A subsequent irregular rise carried this index upward to 111·2 in December, 1934.

Subsection 2.—The Index Number on a Post-War Base (1926).

The official Canadian index numbers of wholesale prices along with the other price indexes computed by the Dominion Bureau of Statistics were revised in 1928, when the list of commodities was increased from 236 to 502. The weighting system was extended to obtain a fairer distribution of importance among sub-groups, and the base was shifted to the year 1926. By that time most of the leading countries of the world had completed post-war currency reorganization, and a reasonable degree of price stability seemed to have been established. Commodities and weights were again revised at the beginning of 1934, bringing the total number of price series in the index up to 567.

The outstanding development in the field of prices since the base revision to 1926 has been the marked dispersion among various price groups between August, 1929, and the beginning of 1933. From 1926 to the latter part of 1929 a moderate decline occurred, but its effect upon the price structure was not great. Subsequent dislocation, however, was extremely serious as may be observed from the following percentage declines of group prices between August, 1929, and February, 1933: Canadian farm products, 60·7 p.c.; raw and partly manufactured materials, 50·5 p.c.; fully and chiefly manufactured goods, 29·3 p.c.; and the average of all commodities at wholesale, 35·5 p.c. From March, 1933, to December, 1934, the movement of commodity prices has been broadly upward, and the advance for primary products considerably more rapid than that for manufactured products. The following index numbers show the relationship between the average of all commodities and specified commodity groups for December, 1934: all commodities 100·0; Canadian farm products, 86·5; raw and partly manufactured materials, 90·3; and fully and chiefly manufactured materials, 102·1. This represents material improvement over conditions existing at the nadir of the depression, although it is evident that equilibrium has not yet been restored.

Section 2.—Retail Prices of Commodities.

Collection of data and calculation of index numbers of retail prices and the cost of living are carried out in co-operation by the Dominion Bureau of Statistics (Department of Trade and Commerce) and the Department of Labour. Resultant series of index numbers are computed from different points of view. The computations of the Labour Department are designed to show changes in the cost of living for workingmen in cities. They are constructed from family budgets, principally a weekly family budget of staple foods, fuel and rent published monthly in the *Labour Gazette* since 1915 and annually since 1911; in addition, figures are included for clothing and sundry items and further data for fuel, light and rent. The Labour Department aims, by this method, to have a basis for computation that can be readily applied to the data for any given locality or district at any time, or for any class of labour—for instance, coal miners, who usually do not live in cities. Index numbers of retail prices and costs of living issued by the Bureau are constructed from a more general point of view, having for their object the measurement of the general movement of such prices and costs in the Dominion as a whole, and being so calculated as to make comparisons possible with other general index numbers constructed on similar principles, for example, the index of wholesale prices. Calculated as they are on the aggregative principle, *i.e.*, the total consumption of each commodity, the Bureau's index numbers afford an excellent measurement of changes in the average cost of living in the Dominion as distinguished from that of any particular class or section.

In the Bureau's index, 1926 is taken as the base year and is represented by 100 to bring it into conformity with other series of index numbers shown in this chapter. A description of the system of weighting of individual items, sub-groups and groups, and of the method of construction of this index number was given at pp. 812-818 of the 1931 Year Book. The Labour Department uses 1913 as 100 for both cost of living and wages index numbers. As will be seen from Table 7, the general cost of living index moved up from 77·7 in 1933 to 78·9 in 1934, following a steady decline from 1929 to 1933. Higher prices for foods and clothing were chiefly responsible for the advance. Rents declined from 85·1 to 80·1. The monthly index for living costs fluctuated during 1934 between 78·2 and 79·9, the December figure standing at 79·0. January and December group indexes were as follows: foods 67·7 and 69·3; fuel 87·4 and 88·4; rent 80·4 and 80·3; clothing 69·2 and 71·0; sundries 92·7 and 92·6.

[1] Subject to revision. [2] Revised since the publication of the 1933 Year Book.

The Family Budget.—A family budget constructed by the Department of Labour appears regularly in the *Labour Gazette*. This budget material has been used by the Bureau to obtain the tables which follow.

Table 9 shows the average prices of items included in the family budget in 1920 and in each of the years from 1925-34. These numbers are weighted by the quantities used by the Department of Labour in computing their monthly family budget. Table 10 gives the group indexes by provinces. An examination of the tables reveals the course of the budget, consisting of food, fuel and lighting, and rent, over the period shown.

9.—Prices of a Family Budget of Staple Foods, Fuel and Lighting, and Rent, for Sixty Cities in Canada, 1920 and 1925-34.

Section 3.—Index Numbers of Security Prices.

Many important advances have recently been made in the direction of improving the technique of making index numbers of security prices. The chief of these are: first, the computation of index numbers to serve different purposes; secondly, weighting of the index numbers so that they will accurately represent the market—an accurate index of market trends cannot be made on the basis of a simple average of market quotations or on any system which does not consider weighting; thirdly, using weighted average prices of individual securities rather than the average of high and low quotations or closing quotations. This last point is of considerable importance, because the average price at which a stock sells on a certain day frequently differs widely from the average of its high and low quotations or its closing price.

11.—Investors Index Numbers of

(1926=

[1] Subject to revision.

In the revised index numbers of security prices which have recently been issued by the Bureau full use of the improvements mentioned has been made, and these index numbers are now in line with the most advanced technique pertaining to the making of such indexes. In the revision, the base of the calculations was also changed. The basic period is now the year 1926, that is, prices prevailing in that year are taken as 100 and subsequent price movements are expressed as a percentage. The year 1926 was chosen as the base in conformity with the tendency which now prevails to substitute a post-war for a pre-war year. This year was also chosen in order to enable comparisons to be made with important indexes in the United States.

Investors Index Numbers of Common Stocks.—Monthly figures for the investors index number of common stocks, computed by the Dominion Bureau of Statistics on the basis 1926=100, have been carried back to 1913. The index falls into two parts, *viz.*, the period subsequent to 1926 and the earlier period. For the period 1913 to 1926 those stocks were used which were included in the index number previously issued on the 1913 base, *viz.*, 31 industrials, 10 public utilities

and 9 banks, or 50 stocks in all. In the subsequent period the list of stocks included in the monthly index numbers was enlarged and now contains 87 industrial, 20 domestic utilities, 6 companies located abroad and 8 bank stocks. Despite the difference in the number of stocks included, the trend of stock prices is adequately shown throughout the whole period. The larger number of stocks included in the revised index number, though adding little to the accuracy of the general index, gives more complete information regarding various groups of stocks traded on Canadian exchanges.

Banks are included in the monthly index numbers but not in the weekly, the trading in such securities not being, as a rule, sufficiently important to warrant their inclusion in a weekly index. In any case, their inclusion does not affect the general index by more than a point or two.

The general movement of common stock prices was upward in the first four months of 1934, with the average increase amounting to about 20 p.c. Roughly two-thirds of this gain was lost in the succeeding three months, after which an irregular recovery placed prices at the end of the year approximately 15 p.c. above levels at the beginning. Considerable variation occurred in the movements of

different groups of stocks. Industrials generally followed the course outlined above for all common stocks. Within this group, however, price behaviour varied widely. Beverages dropped sharply from 163·6 in January to 86·7 in July, and then recovered to 93·6. Oils moved almost steadily upward throughout the year from 147·0 to 177·8. Pulp and paper fluctuated narrowly between 9·6 and 13·8. The size of these numbers and the difference in the movements indicated, gives some idea of the variety existing in the industrial price field. The index for utilities declined gradually after the first three months of the year from 58·8 to 47·5. This index averaged 70 points less than the one for industrials during 1934. In other words, industrials were 23 p.c. above 1926 price levels, while utilities were 47 p.c. lower than at that time.

Weighted Index Numbers of Mining Stocks.—A weighted index number of mining stocks is computed by the Dominion Bureau of Statistics on the basis 1926=100. Mines of a semi-industrial nature, such as International Nickel and Consolidated Mining and Smelting Company, do not appear here but are included in the Bureau's investors index of common industrial and public utility stocks.

Mining stock prices advanced rapidly during the first quarter of 1934, and were fairly steady during the second and third quarters. They declined rather sharply in October and November, but advanced moderately during December. An index of gold-stock prices showed a net increase for the year of roughly 24 p.c. Gold stocks continued to advance for six months after prices for gold itself had ceased to rise, and similarly the total appreciation in gold-stock prices since the mint par of $20.67 per ounce was abandoned, has been very much greater than the currency premium established on gold. An index of base-metal stock prices was 129·6 in December, as compared with 128·3 in January, and 164·2 in June, when prices were at the highest point of the year.

12.—Weighted Index Numbers of Prices of Mining Stocks, by Months, January, 1932, to March, 1935.

Section 4.—Prices of Services.

A study of the prices of services sheds considerable light on the cost of living as such services are a considerable item in the average family budget. Information with regard to the trend of street-car fares, of rates for manufactured and natural fuel-gas, of domestic electric light rates and of telephone charges was published on pp. 801-804 of the 1927-28 Year Book. Later information shows that the prices of manufactured fuel-gas have shown a downward tendency, the Dominion index number for 1933 being 94·4, as compared with 100·0 in 1926. The index number of the price of natural fuel-gas also declined from 100·0 in 1926 to 92·5 in 1930, rose again to 94·3 in 1932, then declined to 93·9 in 1933.

On the other hand, telephone rates have shown a distinct increase, the Dominion index number of domestic telephone rates having risen from 100·0 in 1926 to 107·4 in 1933. Again, the business telephone rate has risen from 100·0 in 1926 to 118·5 in 1933.

Additional information and details by provinces regarding the prices of services will be found on pp. 178-188 of the Annual Report on Prices and Price Indexes, 1913-33, issued by the Dominion Bureau of Statistics.

Hospital Charges.—In view of discussions of the increased cost entailed by illness and hospital treatment, special investigations on hospital charges are now made annually and the results are given as Dominion averages in the following table. In general this shows that hospital charges in 1930 were 87 p.c. above the 1913 level. From 1930 to 1933 rates gradually declined to less than 83 p.c. above those in 1913. Operating room charges have not increased at the same rate as room charges, being only 56 p.c. above those in 1913, while the latter averaged 90 p.c. higher. The cost of maintaining patients in hospitals declined about 9 p.c. between 1931 and 1933.

The detailed results of this investigation, including the statistics by provinces, are to be found on pp. 179-182 of the Annual Report on Prices and Price Indexes, 1913-33, issued by the Dominion Bureau of Statistics.

Section 5.—Index Numbers of Interest Rates.

Few economic statistics are of more significance than the net rates of interest paid on absolutely the safest securities, such as government bonds maturing on a fixed and definite date. Other interest rates naturally grade upward from the rates which the safest of possible borrowers has to pay, and from the fluctuations of that price an idea may be obtained as to the relation between the supply of, and the demand for, funds for investment.

Prior to the War the funded debt of the Dominion was entirely held outside the country, there being no home market for Canadian Government bonds. Since about the beginning of the century, however, the province of Ontario, the wealthiest and most populous of the provinces of the Dominion, has done its financing largely in Canada itself, and the fluctuation in the rate of yield of Province of Ontario bonds is thus the best long-term indicator of net interest rates in the Dominion. These yields, compiled originally by Wood, Gundy and Co., of Toronto, and furnished by that firm to the Bureau of Statistics, have been recalculated as index numbers on a 1926 base and are shown in Table **14**, a particularly interesting feature being the decline in the interest rates index from the high point of 129·4 in October, 1920, to 87·7 in February of 1928. Since the latter date, the scarcity of funds for this type of investment forced the index number up to 104·4 in May and September,

1929, from which point it gradually declined to 92·9 in September, 1930. In January and February, 1931, it had risen to 95·0 but in March and April it declined to 92·9 and in May to 91·9. In the fall months of 1931 yields began to advance sharply, reaching a peak in January, 1932. Tension in financial markets eased appreciably in the latter half of that year, and funds for long-term investment were increasingly plentiful during the next two years. Lower bank interest rates were accompanied by a rise in bond prices in 1934 to the highest level since 1906, and of course a corresponding decline occurred in bond yields. The Province of Ontario bond yield index declined from 99·2 in January, 1933, to 76·2 in December, 1934, rising to 80·8 for April, 1935.

Section 6.—Index Numbers of Import and Export Valuations.

Index numbers of import and export valuations have been computed by the Bureau of Statistics since 1920 and are shown in Table **15** for the calendar years 1924-33. Fifty export and 60 import commodities are included in the calculations. The year 1913 has been taken as the base. Index numbers were calculated on the aggregative principle and both an individual and a group system of weighting has been used on the basis of quantities imported or exported.*

*For list of commodities included, see Appendix A of "Prices and Price Indexes, 1913-26".

[1]Revised since the publication of the 1933 Year Book.

CHAPTER XXI.—PUBLIC FINANCE.

The following treatment of public finance includes an outline of Dominion, provincial and municipal finance in Canada, supported by the necessary detailed statistics, and closes with a brief discussion of the national wealth and national income of the Dominion as the basis of all public finance.

The great increase in Dominion expenditure since 1913 has, of course, been mainly due to the Great War and the burden of interest, pension charges, soldiers' civil re-establishment, etc., resulting from the War. Similar increases have also taken place during the same period in provincial and municipal expenditures. Thus, in their fiscal years ended 1933, the total ordinary expenditure of the nine Provincial Governments was $200,528,217 as compared with $53,826,219 in 1916, only 17 years before—an increase of almost 273 p.c. (The aggregate interest payments of Provincial Governments rose from $7,817,844 in 1916 to $62,546,792 in 1933.) Again, between 1913 and 1932, the aggregate taxes imposed by the municipalities of Ontario increased from $34,231,214 to $126,835,014—an increase of 270·5 p.c. In Quebec the ordinary receipts of municipalities increased from $33,865,750 in 1915 to $85,798,988 in 1932—an increase of 153·4 p.c. In Manitoba the increase in municipal taxation has been from $7,730,122 in 1913 to $20,598,300 in 1932—an increase of 166·5 p.c. In Saskatchewan the grand total of municipal tax levies was $13,358,627 in 1914 and $24,388,477 in 1932. In Alberta the municipal taxes levied amounted to $9,791,846 in 1914 and to $15,453,640 in 1932. In British Columbia the taxes collected by the municipalities totalled $9,382,099 in 1917 and $17,089,972 in 1932. Finally in the extreme east the aggregate tax receipts of the municipalities of Nova Scotia were $6,613,675 in 1932 as compared with $3,443,681 as recently as 1919—an increase of 92·1 p.c. in the last thirteen years. The seven provinces covered by these statistics contained in 1931 approximately 95 p.c. of the population of the Dominion.

Section 1.—Dominion Public Finance.*

Historical Sketch.—Both under the French *régime* and in the earlier part of the British, the territorial or casual revenues of Canada, consisting of certain seigneurial dues and the proceeds of the sale of government timber and land, were reserved to the Crown, while the right of levying taxes and of regulating the trade and commerce of the colony was, after 1763, deemed to be vested in the British Parliament.

By the Quebec Act of 1774, certain duties on spirits and molasses were imposed, to be expended by the Crown in order to provide a revenue "towards defraying

* The statistics in this section have been made up from the Public Accounts and were finally revised by the Department of Finance, with the exception of those parts dealing with war tax revenue and inland revenue on pp. 896 to 902, which were revised by the Department of National Revenue.

the expenses of the administration of justice and the support of the civil government of the province". A little later, in 1778, the British Government, by the Declaratory Act (18 Geo. III, c. 12), renounced forever the right of taxing the colonies to provide Imperial revenue, but maintained its claim to impose duties considered necessary for the regulation of trade, the proceeds to go towards defraying the expenditures of the colonial administration. After the Constitutional Act of 1791, the customs duties remained under the control of the Imperial Government, their revenue, as well as the territorial revenue above mentioned, coming in to the Executive Administration independently of the Legislative Assembly and thus making the Executive power largely independent of the Legislature. In case these revenues proved insufficient, recourse could generally be had to the grant made by the Imperial Government for the support of the army. As time went on, however, the Crown revenues became more and more inadequate to meet the increasing expenditure, while the wave of economy in the United Kingdom after 1815 made it impossible any longer to supplement these revenues from military sources. On the other hand, the purely provincial revenues collected under the authorization of the Provincial Legislature showed an increasing surplus. The power of the purse thus began to pass into the hands of the Legislatures; further, in 1831 the British Parliament passed an Act placing the customs duties at the disposal of the Legislatures.

Under the Act of Union, a consolidated revenue fund was established. All appropriation bills were required to originate in the Legislative Assembly, which was forbidden to pass any vote, resolution or bill involving the expenditure of public money unless the same had first been recommended by a written message of the Governor General. The British Government surrendered all control of the hereditary or casual revenues, which were thenceforth paid into the treasury of the province to be disposed of as its Legislature should direct.

At the interprovincial conference which took place prior to Confederation, it was decided that the new Dominion Government, which was to take over permanently, as its chief source of revenue, the customs and excise duties that had yielded the greater part of the revenues of the separate provinces (direct taxation being as unpopular in British North America as in other new countries), was also to assume the provincial debts and to provide out of Dominion revenues definite cash subsidies for the support of the Provincial Governments. (See Tables **16** and **17.**) Until the Great War, which made other taxes necessary, the customs and excise revenue constituted the chief resource of the Dominion Government for general purposes—the Post Office revenue and the Government railway receipts, which are not taxes at all, being mainly or entirely absorbed by the expenses of administering these services. Indeed, for many years preceding the War, customs and excise duties, together with the revenue from the head tax on Chinese immigrants, were the only items of receipts which were classified as taxes by the Department of Finance. In the last pre-war fiscal year these two items aggregated $126,143,275 out of total receipts on consolidated fund account amounting to $163,174,395,

the Post Office and Government railways furnishing between them $26,348,847 of the remainder, offset, however, by expenditures on these two services amounting to $27,757,196. Miscellaneous revenue, largely fees, amounted in that year to $10,682,273—a comparatively small fraction of the total. As both customs and excise taxes were indirect, the average Canadian felt but little the pressure of taxation for Dominion purposes.

The War enormously increased the expenditure, and this increase had in the main to be met by loans. It is, however, a cardinal maxim of public finance that, where loans are contracted, sufficient new taxation should be imposed to meet the interest charge upon the loans and to provide a sinking fund for their ultimate extinction. This war taxation was begun in Canada within the first weeks of the War when, in the short war session of August, 1914, increases were made in the customs and excise duties on various commodities, including coffee, sugar, spirituous liquors and tobacco. In 1915 special additional duties of 5 p.c. *ad valorem* were imposed on commodities imported under the British preferential tariff and 7½ p.c. *ad valorem* on commodities imported under the intermediate and general tariffs, certain commodities being excepted. New internal taxes were also imposed on bank circulation, on the income of trust and loan companies, on insurance in other than life and marine companies, on telegrams and cablegrams, railway tickets, sleeping-car berths, etc., also on cheques, postal notes, money orders, letters and post cards. In the following year, the business profits war tax (dropped in 1921)* was introduced, and in 1917 an income tax was imposed. In 1918 both of these taxes were increased and their application widened, and in 1919 the income tax was again increased, and still further augmented in 1920 by a surtax of 5 p.c. of the tax on incomes of $5,000 and over; the sales tax was also introduced in that year. The cumulative result of these war taxes was that, in the fiscal year ended Mar. 31, 1921, customs duties were for the first time displaced from their position as the chief factor in Canadian revenue, the war taxes yielding $168,385,327, as against the customs yield of $163,266,804. In 1922 war taxes yielded $177,484,161, while the yield of the customs fell to $105,686,645. Again, in 1923 the war taxes yielded $181,634,875 and customs duties $118,056,469, in 1924 $182,032,661 and $121,500,798, in 1925 $147,164,158 and $108,146,871, in 1926 $157,296,320 and $127,355,144, in 1927 $156,167,434 and $141,968,678. In 1928, however, the customs duties yielded $156,985,818 as against $150,319,087 collected by the war taxes, in 1929 $187,206,332 as against $145,029,742, in 1930 $179,429,920 as against $134,086,005, and in 1931 $131,208,955 as against $107,320,633. The situation was again reversed in 1932, when war taxes yielded $122,266,064 and customs duties $104,132,677; in 1933, when war taxes were $146,412,011 as against $70,072,932; and in 1934, when they were $170,051,973 as against $66,305,356 for customs duties.

* Belated revenue from this tax has been collected in subsequent fiscal years down to 1933 (see Table 8, p. 897).

A more detailed sketch of the changes made in taxation from 1914 to 1926 will be found at pp. 755-759 of the 1926 Year Book, while similar information *re* tax changes in 1927 to 1929 was given at pp. 791-792 of the 1930 Year Book.

Recent Modifications in the System of Taxation.—In 1930, the general rate of the sales tax was reduced from 2 to 1 p.c. *Bona fide* co-operative organizations, government or like annuities (to the extent of $5,000), and donations to churches, schools and hospitals (to a maximum of 10 p.c. of the net income of the taxpayer) were exempted from income tax, and the $500 exemption for children was extended to cover certain dependent relatives suffering from mental or physical infirmity. In the customs tariff, the iron and steel schedules were completely revised, seasonal tariffs were adopted in respect of fruits and vegetables, duties were reduced under certain tariffs on tea, porcelain and chinaware and meats and increased on beans and butter, and so-called countervailing duties were imposed in respect of 16 commodities. The year was unusual in that it saw a second tariff revision, namely, that of the special session of September, when the anti-dumping clauses of the tariff were re-written and very many changes were made in rates of duty in the schedules. Increases were made *inter alia* on most agricultural products, on printed matter and manufactures of paper, on numerous commodities in the iron and steel group, on a wide range of textile items and on boots and shoes. Power was granted to the Governor in Council to prohibit the importation into Canada of goods exported to the Dominion from any country not a contracting party to the Treaty of Versailles.

In 1931, the general rate of the sales tax was increased from 1 to 4 p.c. Tax-free limit for cheques, receipts for money paid by banks, money orders, travellers cheques and Post Office money orders was reduced from $10 to $5 and postage stamps could be used on such documents in lieu of excise tax stamps. A special excise tax of 1 p.c. was imposed on importations. As regards the customs tariff, the 1931 session saw several further amendments of the administrative clauses of the tariff, the powers of the Governor in Council in the matter of the making of tariffs being widened to include the granting and withdrawing of rates more favourable than those of the British preferential tariff. Provision was made for penalty in the case of any person guilty of using the tariff to increase prices to consumers. Rates were altered on many items, the countervailing duties having been rescinded in entirety at the special session in September, 1930. Increases were made on fresh and canned meats, tea, field and garden seeds, prepared foods, containers, wallboards, spray mixtures, building stone and granite, steel plate, motor vehicles, wood veneers, various textiles, coal and coke, leather and leather goods, and numerous other commodities. The importation of second-hand motor vehicles, except under specified exceptional circumstances, was prohibited.

In April, 1932, the income tax was raised to 11 p.c. on corporations and joint-stock companies. In the case of personal incomes, the deduction of 20 p.c. formerly allowed from the tax payable under the established schedule of rates was repealed;

a surcharge of 5 p.c. was made on net incomes of over $5,000 and the exemptions were reduced from $3,000 to $2,400 for married persons, and from $1,500 to $1,200 for single persons. These changes applied to 1931 incomes. The sales tax was increased by 2 p.c. to 6 p.c., and the special excise tax on goods imported into Canada was raised from 1 p.c. to 3 p.c. The stamp tax on cheques, promissory notes, money orders, etc., was increased from 2 cents for each instrument over $5, to 3 cents on amounts between $5 and $100, and 6 cents over $100. Sleeping-car tickets were taxed 10 p.c. (minimum 25 cents) and parlour-car tickets 10 cents flat; there were also changes in the tax rates of cable and telegraphic messages and in the stock and bond transfer tax. No important tariff changes were made in view of arrangements for the then pending Imperial Economic Conference. (The tariff changes resulting from the Imperial Economic Conference and enacted at the fourth session of the 17th Parliament, which opened on Oct. 6, 1932, were briefly dealt with on pp. 485–486 of the 1933 Year Book.)

In 1933, the tax on corporation incomes was raised to 12½ p.c. and the $2,000 exemption was removed. Where a consolidated statement of a company and its subsidiaries was compiled, the tax rate was set at 13½ p.c. On personal incomes the exemption was reduced from $2,400 to $2,000 for married or from $1,200 to $1,000 for single persons, and the exemption for dependent children was lowered from $500 to $400. The rate of taxation was increased according to a new schedule, the tax on the first $1,000 of taxable income being 3 p.c. In certain cases, new taxes of 5 p.c. were imposed at the source on interest or dividends paid by Canadian debtors to non-residents (Dominion Government bonds were exempt from this tax), or to residents where such interest or dividend is paid in funds which are at a premium in relation to Canadian exchange. The sales tax remained at 6 p.c., though with a view to additional revenue an adjustment of the exempt and the partly exempt lists was made. Special excise taxes were levied as follows: 10 p.c. on cosmetics and toilet preparations; 5 p.c. on automobile tires and tubes; 2 cents per lb. on refined sugar; 25 cents per gallon on unfermented wort; and 50 cents per lb. on malt syrup and malt products. The provision of the Special War Revenue Act exempting from the stamp tax cheques, receipts to banks, money orders, travellers cheques, etc., not exceeding $5 in value was repealed (except as regards creamery tickets or cheques). The stamp tax on postal notes was raised from 1 to 3 cents. Cigarette papers and tubes were taxed 2 cents per hundred leaves and 5 cents for 50 tubes, respectively. The excise duty on distilled spirits used in the manufacture of proprietary medicines, extracts, perfumes, etc., was made $2.50 per proof gallon and an excise duty of $1 per proof gallon was imposed on spirits distilled from juices of native fruits used by wine manufacturers in fortifying native wines.

In 1934, the tax changes proposed were of limited character. The chief changes were the reduction of the excise tax on sugar by 1 cent per lb. and the proposed imposition of a tax of 10 p.c. on gold, to be deducted from the proceeds of all gold

deposited at the Mint for sale and to replace the revenue lost by the partial remission of the tax on sugar. It was pointed out that the recent prosperity of the gold-mining industry was due largely to circumstances entirely external to the industry, *viz.*, an increase in the selling price of gold by about 70 p.c. as a result of the chaotic condition of world currencies, the depreciation of our dollar in foreign exchanges and the revaluation of gold in certain countries. As finally approved, the legislation provided for a levy of 25 p.c. on the premium value of gold in place of 10 p.c. on the total value, and it was further provided that the tax should not reduce the amount received by the depositor below $30 per oz. Further, only those mines which had paid dividends continuously since 1933 were made liable to the premium tax on gold, thus relieving from taxation newly developed or low-grade properties which have not, until recently, been operating profitably. Placer gold was also exempted. Producers paying the tax were allowed some compensation in income tax adjustment and in exemption from the usual handling charge at the Mint. Excise duties were changed principally by consolidating the duty of 3 cents per lb. on malt and the gallonage tax of 12½ cents on beer into a single excise duty of 7½ cents per lb. on malt, the net result being a slight reduction in the rate of taxation to which beer was directly or indirectly subject, calculated on a gallonage basis. Reductions under the British preferential customs tariff were made in the case of certain items of major commercial importance, including jute yarns, wide steel plates, salt cake, crude oil not in its natural state, impregnated canvas, and yarns of artificial silk. Numerous chemical commodities of a less important nature were returned to the free list. Duties were imposed under the intermediate or general tariff schedules on pea-nut oil and were increased on certain ferro-alloys. Duties on jute twines were increased under all tariffs. On all imports under the British preferential tariff, the special excise tax was reduced from 3 to 1½ p.c.

Subsection 1.—The Current Balance Sheet of the Dominion.

A summary review of the current financial situation of the Dominion as at Mar. 31, 1933 and 1934 is given in the balance sheets shown as Table **1.** This shows the figures for gross debt on the above dates to have been $2,996,366,665 and $3,141,042,097 respectively, partly offset by active assets aggregating $399,885,839 and $411,063,956, leaving the figures for net debt at $2,596,480,826 and $2,729,978,-141 respectively.* Non-active assets, including such public works as canals and railways, also loans to railways, amounted in the aggregate to $1,785,063,662 and $1,794,558,864, leaving debit balances on Consolidated Fund Account on Mar. 31 of $811,417,164 and $935,419,276 respectively. The details of the various assets and liabilities are contained in the schedules accompanying the balance sheet and printed in the Public Accounts.

* The net debt on Mar. 31, 1925 was $2,417,437,686; on Mar. 31, 1926, $2,389,731,099; on Mar. 31, 1927, $2,347,834,370; on Mar. 31, 1928, $2,296,850,233; on Mar. 31, 1929, $2,225,504, 705; on Mar. 31, 1930, $2,177,-763,959; on Mar. 31, 1931, $2,261,611,936, and on Mar. 31, 1932, $2,375,846,172. See Table 20, p. 908.

1.—Balance Sheet of the Dominion of Canada, as at Mar. 31, 1933 and 1934.

(From the Public Accounts.)

Item.	1933.	1934.
	$	
ACTIVE ASSETS—		
Cash on hand and in banks	1,555,876	9,874,579
Specie reserve	69,875,518	71,406,030
Advances to provinces, banks, etc	185,226,291	191,920,712
Advances to foreign governments	30,494,720	30,494,720

Insurance and superannuation funds	98,500,189	109,481,507
Trust funds	18,525,396	18,271,120
Contingent and special funds	2,594,601	4,441,481
Province accounts	9,623,817	9,623,817
Funded Debt	2,651,898,934	2,791,706,560
Interest due and outstanding	1,606,662	1,683,672
Total Liabilities or Gross Debt	2,996,366,665	3,141,042,097

[1] Indirect Liabilities—Guarantees given by the Dominion of Canada are listed on pp. 912-915.

Subsection 2.—Receipts and Disbursements.

The receipts of the Dominion Government on Consolidated Fund Account for the fiscal year ended Mar. 31, 1934, were $324,062,000, an increase of $17,425,010 as compared with the preceding year; besides these, special receipts amounted to $409,271—a total of $324,471,271 (Table 2). The regular expenditure on Consolidated Fund Account was $346,648,546. while special expenditure, including net income deficit of the Canadian National Railways for 1933, amounted to $101,733,833. There were also a net expenditure on capital account of $6,490,333 and other net expenditures of $3,095,873, including advances to Harbour Commissioners (non-active) $2,109,837. Thus the total disbursements, inclusive of these and other advances, amounted to $457,968,585. There was an increase of $133,497,315 in the net debt (gross debt less active assets) during the year. (See Table 24 for interest-bearing debt.)

Detailed statistics of receipts and disbursements are contained in Tables 2 and 3. Tables 4 and 5 are historical tables giving the figures of the main items of Dominion receipts and expenditure since Confederation, while Table 6 shows the per capita receipts and expenditure for these years, calculated on census and estimated populations. Per capita receipts and expenditures are given by principal items in Table 7.

2.—Details of Revenue Receipts, fiscal years ended Mar. 31, 1930-34.

Item.	1930.	1931.	1932.	1933.	1934.

[1] The policy regarding the recording of premium, discount and exchange has been changed since 1932, the net balance only being shown for 1933 and 1934 in place of the receipts and disbursements on this account as in former years.

3.—Details of Expenditures, fiscal years ended Mar. 31, 1930-34.

NOTE.—"Adulteration of food", $120,927, "Marine hospitals", $135,218, and "Quarantine", $125,827, for 1934, have been classified in the Public Accounts under the heading "Health" since 1928, but are here deducted and shown separately so as not to break the comparability of the figures with those of earlier years. The Public Accounts item "Health" is therefore $508,413 for 1934, compared with the $126,441 shown here.

[1] For detailed statement see Table 8, p. 897. [2] Includes various smaller items of revenue receipts. [3] Nine months. [4] Inclusive of special receipts of $1,905,648 in 1921, $319,184 in 1922, $8,479,310 in 1923, $9,743,636 in 1924, $4,680,913 in 1925, $2,147,503 in 1926, $1,756,704 in 1927, $6,924,594 in 1928, $4,687,607 in 1929, $4,505,186 in 1930, $6,573,577 in 1931, $7,012,249 in 1932, $4,489,339 in 1933, and $409,271 in 1934. See Table 2, pp. 888-889.

6.—Per Capita Figures of Taxation, Total Revenue Receipts, Expenditure on Consolidated Fund Account and Total Expenditure, 1868-1934.

NOTE.—The years marked with an asterisk (*) are those of the censuses, April 2, 1871; April 4, 1881; April 6, 1891; April 1, 1901; June 1, 1911, 1921 and 1931. For the intercensal years the populations are estimated as at June 1 (see p. 164 for estimates of population). The fiscal period of 1907 is nine months ended Mar. 31. See the tables on pp. 891-894 for the figures of revenue and expenditure on which this table is based.

Subsection 3.—War Tax Revenue.

An account of the various war taxes, imposed in 1915 and subsequently, has already been given on pp. 883–886 in the introduction to this section. For convenience of reference, the amounts received from these taxes since the beginning are segregated and the totals paid in to the Receiver General are given in Table **8**. The taxes imposed on banks, trust and loan companies and insurance companies are collected by the Department of Finance. The excise war taxes, the business profits war tax and the income war tax are collected by the Department of National Revenue, formerly the Customs and Excise Department. The amounts of excise war taxes collected from different sources in the past six fiscal years are given in Table **9**, while Tables **10** and **11** contain the details by provinces for the two latest years. (See also Tables **40** to **45** of this chapter.)

8.—War Tax Revenue Received by the Receiver General, fiscal years ended Mar. 31, 1915-34.

Subsection 4.—Inland Revenue.

Under the Inland Revenue Act (R.S.C., 1906, c. 5), the Department of Inland Revenue had the control and management of standard weights and measures and of the collection of excise duties, of stamp duties, internal taxes, bridge and ferry tolls and rents until 1918. It administered the Statutes which dealt with the adulteration of food and other articles, electricity and gas inspection, patent medicines, petroleum, naphtha and the analysis of fertilizers and feeding stuffs. This department also established the food standards, which were put into force by Orders in Council under the authority of Section 26 of the Adulteration Act. Later the administration of the Adulteration of Food and the Proprietary and Patent Medicine Acts was transferred to the Department of Health, that of the Commercial Feeding Stuffs and Fertilizers Acts to the Department of Agriculture, and that of the Acts relating to weights and measures and the inspection of gas, electric light and water meters to the Department of Trade and Commerce. By Order in Council of May 18, 1918, the Departments of Customs and of Inland Revenue were combined as the Department of Customs and Inland Revenue, under one Minister of the Crown. On June 4, 1921, the Department of Customs and Inland Revenue was consolidated as the Department of Customs and Excise (11-12 George V, c. 26). As from April 1, 1927, the name of this department, which collects the great bulk of the revenue of the Dominion, was changed to Department of National Revenue by authority of 17 Geo. V, c. 34. This Act provides for three chief departmental officers—the Commissioner of Customs, the Commissioner of Excise and the Commissioner of Income Tax, while an Assistant Commissioner of Customs may also be appointed.

In the fiscal year ended Mar. 31, 1934, the gross amount of customs duties collected by the department was $73,154,472, as compared with $77,271,965 in 1933, $113,997,851 in 1932, $149,250,992 in 1931, $199,011,628 in 1930 and $200,479,505 in 1929. The total of excise duties and excise war taxes collected in the fiscal year ended Mar. 31, 1934, was $145,176,663, as compared with $123,478,841 in 1933, $109,586,366 in 1932, $93,986,975 in 1931, $129,822,444 in 1930 and $148,376,494 in 1929.[1] The total of income tax collected in the fiscal year ended Mar. 31, 1934, was $61,399,172, as compared with $62,066,697 in 1933. While the income tax and the business profits war tax (see Table 8) are collected by the Commissioner of Income Tax, the other main branches of inland revenue—the excise duties and excise war taxes—are collected by the Commissioner of Excise.

Canadian Excise Tariff.—The following is a statement of the Canadian excise tariff, as existing at Jan. 1, 1935:—

1. Spirits distilled in Canada, per proof gal.	$ 7·00
Except Spirits as follows:—	
(a) Used in a bonded manufactory for medicines, extracts, etc., per proof gal.	2·50
(b) Used in a bonded manufactory for perfumes, per proof gal.	1.50
(c) Used in a bonded manufactory for vinegar, per proof gal.	0.27
(d) Used for chemical compositions approved by Governor in Council, per proof gal.	0.15
(e) Sold to licensed druggists for pharmaceutical preparations, per proof gal.	2.50
(f) Distilled from native fruits and used by a licensed wine manufacturer for fortification of native wines, per proof gal.	1.00
2. Spirits imported (in addition to any of the duties otherwise imposed), per proof gal.	0.30
3. Beer or Malt Liquor:—	
(a) Brewed in whole or part from any substance other than malt, per Gal.	0.22
(b) Imported (in addition to any of the duties otherwise imposed), per gal.	0.07
4. Malt:—	
(a) Produced in Canada and screened, per lb.	0.06
(b) Imported, per lb.	0.06
(c) Imported, crushed or ground, per lb.	0.08
5. Malt Syrup:—	
(a) Produced in Canada, per lb.	0.10
(b) Imported, per lb.	0.16
6. Tobacco, Cigars and Cigarettes:—	
(a) Manufactured tobacco, per lb.	0.20
(b) Cigarettes weighing not more than 3 lb. per M, per M.	4.00
(c) Cigarettes weighing more than 3 lb. per M, per M.	11.00
(d) Imported leaf tobacco, unstemmed, per lb.	0.40
(e) Imported leaf tobacco, stemmed, per lb.	0.60
(f) Cigars, per M.	3.00

[1] Table 9, p. 897, gives the details of the revenues from individual taxes for the years 1929-34 and Tables 10 and 11, pp. 898-899, give the revenues from individual taxes by provinces for 1933 and 1934.

A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities to universities, scientific or research laboratories, or to any *bona fide* public hospital for medicinal purposes only.

Revenue from Excise Duties.—The inland revenue collected from excise duties, other than war taxes, is shown by items for the past six fiscal years in Table **12.** Tobacco, including cigarettes, is shown by the figures to be supplying about 70 p.c. of the revenue from excise duties.

12.—Details of Excise Duties Collected, fiscal years ended Mar. 31, 1929-34.

(As shown in the Report of the Commissioner of Excise.)

Alcohol and Tobacco Taken out of Bond.—In Table **15** are shown the quantities of spirits, malt liquor, malt, cigars, cigarettes and tobacco taken out of bond for consumption in the fiscal years ended 1911 to 1934.

Between 1920 and 1934 the number of cigars taken out of bond fell from 270,089,761 to 115,988,080 and the quantity of tobacco, which was 23,049,012 lb. in 1920, had fallen to 20,870,651 lb. by 1925, since when there was a steady increase to 22,815,839 lb. in 1933. The consumption of cigarettes increased from 2,440,982,912 in 1920 to 5,082,314,590 in 1931 but declined to 4,401,628,765 in 1932, and 3,728,832,089 in 1933, rising again to 4,342,728,835 in 1934.

Between 1923 and 1929 spirits taken out of bond (exclusive of imported spirits) rose from 729,678 gal. to 2,016,802 gal., but there has been a decided and steady drop since 1929 to 769,527 gal. for 1933, with an increase to 933,946 gal. in 1934. Malt liquor shows an increase from 36,789,195 gal. in 1923 to 65,719,129 gal. in 1929 and a decrease to 40,105,883 gal. in 1934.

15.—Quantities of Spirits, Malt Liquor, Malt and Tobacco Taken Out of Bond for Consumption, fiscal years ended Mar. 31, 1911-34.

(For years prior to 1900 see 1916-17 Year Book, p. 528, and for 1901-10 see 1933 Year Book, p. 840.)

[1]Exclusive of imported spirits but inclusive of non-potable spirits down to 1921. [2]Including snuff.

Subsection 5.—Subsidies and Loans to Provinces.

Subsidies.—Tables **16** and **17** show the subsidies and other payments made by the Dominion to each of the Provincial Governments for the individual fiscal years ended from 1929 to 1934 (Table **16**), and the totals paid from Confederation to 1934 (Table **17**). The provincial subsidies payable by the Dominion Government were originally settled by the British North America Act, 1867 (30 and 31 Vict., c.3, s. 118), but were revised by the British North America Act, 1907 (7 Edw. VII, c. 11). Under the revised settlement each Provincial Government receives: (a) a fixed grant according to population and (b) a grant at the rate of 80 cents per head of the population up to 2,500,000, and at the rate of 60 cents per head of so much of the population as exceeds that number. The province of British Columbia received an additional grant of $100,000 per annum for a period of 10 years from 1907.* An additional grant of $100,000 per annum is payable to Prince Edward Island under an Act of 1912 (2 Geo. V, c. 42), and the payments to Manitoba were revised by the Extension of Boundaries (Manitoba) Act, 1912 (2 Geo. V, c. 32); in 1931 an amount of $4,822,843 was paid as a readjustment in lieu of public lands from 1870 to 1908 as provided for in the Manitoba Natural Resources Act, 1930. Other payments to the Provincial Governments by the Dominion Government consist of special grants, such as compensation for lands, allowances for buildings, allowances in lieu of debt, allowances pending reconsideration of subsidies, etc.

*See Canada Year Book, 1907, pp. xxxiii-iv.

[1]Compensation for lands and allowances for buildings. [2]Allowances in lieu of debt.

Loans to Provinces.—All of the provincial loans recently advanced by the Dominion have been made to the western provinces under the authority of relief legislation beginning with the Unemployment and Farm Relief Act 1931 and these have been secured by treasury bills of the respective provinces, bearing interest in the neighbourhood of 5 p.c. The sum total of such loans outstanding as at Mar. 31, 1934, was $51,314,180.

In addition to these, however, there were also outstanding at that date $10,168,688 of housing loans, being the balance of loans made to the provinces in the years following the Great War, on the authority of Orders in Council passed in 1918 and 1919, and of the Appropriation Acts of 1920 and 1921. Upon these loans the province of Ontario repaid the whole of the advances in 1928 and the other provinces concerned have in most cases reduced their indebtedness from year to year.

Table **18** gives details of the loans made by the Dominion Government to the provinces concerned on account of relief expenditures, and Table **19** shows the amounts outstanding as at Mar. 31 of each of the years 1920–34, on account of loans made for housing.

Subsection 6.—National Debt.

The gross national debt of Canada on Mar. 31, 1914, was $544,391,369, as against assets of $208,394,519, leaving a net debt of $335,996,850. Comparatively small as was this debt, it was a debt incurred almost altogether either for public works of general utility which, like the Intercolonial and transcontinental railways and the canal system, remained assets, though perhaps not realizable assets of the nation, or was expended as subsidies to enterprises, which, like the Canadian Pacific Railway, though not government-owned, assisted greatly in extending the area of settlement as well as the productive and, therefore, the taxable capacity of the country. Broadly speaking, it was a debt incurred for productive purposes. Also, it was mainly held outside the country, the principal of the Dominion funded debt payable in London being $302,842,485 on Mar. 31, 1914, as against only $717,453 payable in Canada.

The great changes brought about in our national debt during the 20 years from 1914 to 1934 have been: (1) the enormous increase in net debt from $335,996,850 to $2,729,978,141; (2) the gross debt, having been largely incurred for war purposes, is not represented by corresponding assets; (3) the debt is now mainly held in Canada, $2,083,307,268 being payable in Canada at Mar. 31, 1934.

Recent Conversions and other National Debt Operations.*—In 1931, extensive conversion and other operations in connection with the national debt were carried out as follows:—

On April 1, 1931, the 5 p.c. Public Service Loan of $25,000,000 fell due in New York and was redeemed out of the proceeds of the loan negotiated in New York in the previous October, effecting a net annual saving in interest of $155,000.

In May, a conversion offer was made in connection with the $1,084,823,350 of funded debt maturing between then and Nov. 1, 1934. The opening offer was to convert $250,000,000, the Minister of Finance reserving the right to increase the amount at any time before May 23. The basis was an exchange of a bond of any of the following four maturities for new twenty-five-year 4½ p.c. bonds, dating from

*For information *re* loans raised and conversion operations carried on between 1914 and 1930 see pp. 842-843 of the 1933 Year Book.

the maturity of the old bonds; the 5 p.c. bonds maturing Oct. 1, 1931, or the 5½ p.c. bonds maturing Nov. 1, 1932, 1933 and 1934, respectively. One of the terms of the new bonds was that at any time after fifteen years the Dominion, on giving sixty days notice, had the right to call any series for redemption. There was attached to each of the new bonds one or more talons representing the difference in interest to maturity of the former series. The amount was over-subscribed more than two and a half times, the conversions being: 5 p.c. War Loan maturing Oct. 1, 1931, $43,125,700; 5½ p.c. Renewal Loan maturing Nov. 1, 1932, $37,523,200; 5½ p.c. Victory Loan maturing Nov. 1, 1933, $276,688,100; 5½ p.c. Victory Loan maturing Nov. 1, 1934, $289,693,300; total, $647,030,300. As from Nov. 1, 1934, the annual saving effected by these operations is $6,254,674.

In November, a public offering of $150,000,000 5 p.c. bonds was made. The loan was named "Dominion of Canada National Service Loan, 1931". The bonds were offered for public subscription in two maturities; one for five years, the price being 99·25; one for ten years at 99, or on a yield basis of 5·17 p.c. and 5·13 p.c. respectively. The loan was over-subscribed, the books being closed twelve days before the advertised closing date. Subscriptions totalled $221,198,200, the division being $79,535,200 maturing in 1936; $141,663,000 maturing in 1941.

In 1932-33, one-year 4½ p.c. treasury bills were sold to the chartered banks at par to the amount of $50,000,000 on Aug. 1. One-year 4 p.c. treasury notes to the amount of $60,000,000 dated Oct. 1 were sold in New York at 99·28. On Nov. 1, 1932, a further $35,000,000 of 4 p.c. 2-year treasury notes were sold at par to the chartered banks. Further, $25,000,000 of 3-year 4 p.c. bonds and $56,191,000 of 20-year 4 p.c. bonds dated Oct. 15, were sold to the public, the 3-year bonds being sold at 99·20 to yield 4·28 p.c. and the 20-year bonds at 93·45 to yield 4½ p.c. The 3-year issue was over-subscribed several times.

The fiscal year 1933-34 was notable for the re-entry of the Dominion into the London market in September 1933 after an interval of about 18 years.

On May 31, $40,000,000 6-month treasury bills, bearing interest at 3½ p.c., were sold to the chartered banks at 99·8773 for $30,000,000 on the day of issue and at 99·8995 for $10,000,000 on July 3. The cost to the Government was 3¾ p.c.

On July 1, $60,000,000 of 4 p.c. treasury notes were sold in New York at 98·875 and on Aug. 1, $50,000,000 of 3⅞ p.c. 1-year treasury bills were exchanged at par with the banks for the 4½ p.c. treasury bill issue of Aug. 1, 1932.

A 4 p.c. registered stock issue amounting to £15,000,000 was sold in London on Sept. 1, 1933. This loan, which carries a sinking fund requirement of ½ of 1 p.c. per annum, was immediately over-subscribed more than five times.

A domestic loan of $225,000,000 was offered to the public in three maturities—2-year, 6-year and 12-year—on Oct. 15, 1933. The 2-year issue was priced at 99·50 to yield 3·75 p.c.; the 6-year at 99·00 to yield 4·19 p.c., and the 12-year at 96·50 to yield 4·38 p.c. The outstanding bonds of the 1918 Victory Loan which matured on Nov. 1, 1933, were accepted at par in exchange for the two earlier maturities of this new issue, but were accepted at 100¼ for the 12-year maturity. All but $30,679,350 of the 1918 Victory Loan was converted. The 6-month treasury bills of May and July, 1933, amounting to $50,000,000, were also accepted

in exchange for the new bonds at a price, including interest, of 101·284. The response was such that the subscription lists were closed ten days before the official closing date.

An issue of treasury bills amounting to $15,000,000 was sold by public tender on Mar. 1, 1934, $2,450,000 maturing after 3 months and sold at a price which made the cost to the Government 2·85 p.c.; and $12,550,000 maturing after 8 months and sold at a cost to the Government of 3·12 p.c.

This $15,000,000 treasury bill issue of Mar. 1 was duplicated on April 18, 1934, by another for the same amount, also sold by public tender: $1,600,000 maturing July 1 was sold at a cost to the Government of 2·41 p.c.; $13,400,000 maturing Oct. 1 was sold at a cost of 2·71 p.c.

On May 1, 1934, a 3¼ p.c. registered stock issue for £10,000,000 was sold in London. It matures in 1950-55 and carries a sinking fund provision of ½ p.c. per annum.

A treasury bill issue of $50,000,000 carrying 2⅞ p.c. was put out Aug. 1, 1934, to replace the 3⅞ p.c. issue for the same amount maturing on the same date.

On Sept. 1, 1934, a banking credit was arranged with the Chase National Bank of New York for $50,000,000 for 1 year at 2 p.c., to be used in retiring the 4 p.c. treasury notes called for redemption in New York on Sept. 1. The maturity date of these notes was originally Oct. 1, 1934.

The maturing bonds of the 1934 Victory Loan amounting to $222,216,850 were provided for by the issue of a domestic loan of $250,000,000 on Oct. 15, 1934. These bonds were put out in four maturities with their price and yields as follows:—2-year bonds, 98·90 and interest, to yield 2·57 p.c.; 5-year bonds, 98·15 and interest, to yield 2·90 p.c.; 8-year bonds, 97·00 and interest, to yield 3·43 p.c.; 15-year bonds, 96·50 and interest, to yield, 3·81 p.c.

The surrender value of the 1934 5½ p.c. bonds was par on subscriptions for the 2- and 5-year issues, 100⅛ for 8-year bonds and 100¼ for 15-year bonds. A total of $154,829,800 of 1934 5½ p.c. bonds was converted out of an outstanding amount of $222,216,850.

On Nov. 1, 1934, $20,000,000 of treasury bills were sold by public tender, $1,600,000 of 3-month bills were sold at a cost to the Government of 2·35 p.c. while the balance of $18,400,000 of 6-month bills were sold at a cost of 2·47 p.c.

Statistics of National Debt.—Summary statistics of the national debt of Canada as at Confederation and at the end of each fiscal year thereafter down to 1934 are given in Table **20**, while details of the active assets and of the gross liabilities as at the end of the past twelve fiscal years are given in Tables **21** and **22** respectively. Further, details of the funded debt, showing the various issues of bonds, the annual interest charges and the place at which principal and interest is payable, are given as at Mar. 31, 1934, in Table **23**. From this it appears that the total payable in London at that date was $384,668,136, in New York $300,000,000, in Canada $2,083,307,268 and in Canada and New York $90,661,100. Thus three-quarters of the funded debt of the Dominion was payable within the Dominion itself, and as a consequence the interest payable outside of Canada was a comparatively small item.

20.—Summary of the Public Debt of Canada and Interest Payments Thereon, July 1, 1867 to Mar. 31, 1934.

Fiscal Yr.	Gross Debt.	Total Assets.	Net Debt.	Net Debt per capita.[7]	Increase or Decrease of Debt during the Year.[1]	Interest Paid on Debt.	Interest Received from Active Assets.	Interest Paid per capita.[7]

[1]The minus sign (−) denotes a decrease.
[2]This amount includes $10,199,520, for which land was taken from the Canadian Pacific Ry. Co.
[3]This amount includes $3,305,450, caused by the settlement of accounts with Ontario and Quebec.
[4]This amount takes into account $5,397,503, allowed to Ontario and Quebec under 47 Vict., c. 6.
[5]Active assets only. [6]Nine months.
[7]The per capita figures are worked out on the basis of the estimates of population given on p. 164.

[12] Subject to redemption on Oct. 1, 1950, or any subsequent interest date on sixty days notice.

The Interest-Bearing Debt of Canada.—Something of the extent of the burden of national debt being carried by the Canadian people may be realized from the fact that, for the fiscal year ended Mar. 31, 1934, the interest charges on the total interest-bearing debt amounted to about 54 p.c. of the total receipts from taxation and over 44 p.c. of the receipts from all sources.

Before the Great War, interest rates were comparatively moderate, but the unprecedented expenditure of the world's capital in that gigantic struggle led, in all the participating countries, to the raising of enormous loans at comparatively high rates of interest, which in many cases still have to be paid until refunding becomes possible under the terms of the contracts made between the nations and their creditors. Thus, in Canada, the average rate of interest paid upon the direct interest-bearing obligations of the nation, which was only 3·368 p.c. at Mar. 31, 1913, rose to 5·164 p.c. at Mar. 31, 1922, and fell gradually to 4·580 p.c. at Mar. 31, 1934. Details of the interest-bearing debt of Canada, and the interest charges thereon, as at March 31 of the years from 1913 to 1934, are given in Table **24**.

24.—The Interest-Bearing Debt, the Annual Interest Charge Thereon and the Average Rate of Interest, as at Mar. 31, 1913-34.

Fiscal Yr.	Bonds, Debentures and Treasury Bills.	Annual Interest Charges on Bonds, Debentures and Treasury Bills.	Average Interest Rate on Bonds, Debentures and Treasury Bills.	Savings Bank Deposits, Trust and other Funds.	Annual Interest on Savings Bank Deposits and other Funds.	Total Interest-bearing Debt.[1]	Annual Interest Charge.	Average Rate of Interest.

[1]The total of interest-bearing debt, as here given, includes bonds purchased and held by the Treasury for sinking funds.

Guaranteed Debt of the Dominion.—Besides the direct debt of the Dominion, already dealt with, there are also large indirect obligations, arising mainly out of the guarantee of securities by the Dominion of the railway lines which now form the Canadian National Railways, and the subsequent extensions thereof. Together with these are other smaller indirect obligations, originating in the Government's guarantees of the bonds of the Canadian National Steamship services and of the bonds of its Harbour Commissions, issued in the main for harbour improvements. Statistics showing the growth of these indirect obligations since 1914 are given in Table **25**, while Table **26** shows the obligations as they existed on Mar. 31, 1934.

25.—Securities Guaranteed by the Dominion Government (Amounts Held by the Public), as at Mar. 31, 1914-34.

Section 2.—Provincial Public Finance.*

Provincial Governments in Canada are in the position, under Section 118 of the British North America Act, 1867 (30 and 31 Vict., c. 3), and the British North America Act, 1907 (7 Edw. VII, c. 11), of having a considerable assured income in subsidies from the Dominion Treasury. Details of these payments are given for recent years in Tables **16** and **17** of this chapter. In addition, through their retention of ownership of their lands, minerals and other natural resources, the provinces which, by the voluntary action of their previously existing Governments entered Confederation, raise considerable revenues through land sales, sales of timber, mining royalties, leases of water powers, etc., while the Prairie Provinces formerly received from the Dominion special grants in lieu of land revenues. However, under legislation of 1930 whereby the Prairie Provinces were given control of their natural resources, all the provinces were placed on an equal footing in the administration of natural resources within their boundaries and as regards revenues accruing therefrom. Further, under Section 92 of the British North America Act, Provincial Legislatures are given authority to impose direct taxation within the province for provincial purposes and to borrow money on the sole credit of the province.

While the *laisser faire* school of political thought was predominant throughout the country, provincial receipts and expenditures were generally very moderate, as may be seen, both for individual provinces and for the provinces collectively, from Tables **29** and **30**. From the commencement of the twentieth century, however, the Canadian public, more especially in Ontario and the West, began to demand increased services from their Governments, particularly in respect of education, sanitation, and public ownership and operation of public utilities. The performance of these functions necessitated increased revenues, which had in the main to be raised by taxation. Among the chief methods of taxation to be employed has been the taxation of corporations and estates, succession duties showing a considerably increased yield even within the comparatively short period of seventeen years from 1916 to 1933 covered by the statements compiled by the Finance Branch of the Bureau of Statistics.† The fact that provincial government is cheaper per head

*Revised by Col. J. R. Munro, Chief of the Finance Branch of the Dominion Bureau of Statistics. This Branch issues detailed statements on Provincial Finance which may be obtained from the Dominion Statistician. For a list of these publications see Section 1 of Chapter XXIX.

†The succession duties collected by the provinces in 1933 amounted in the aggregate to $13,104,687, as compared with $1,020,972 as recently as 1904, or an increase of more than 12-fold in 29 years. The aggregate revenue raised by taxation of corporations, land, income and miscellaneous (exclusive of gasolene taxes, succession duties and amusement taxes), increased from $7,217,548 in 1916 to $32,771,095 in 1933, an increase of 354 p.c. in 17 years.

in the eastern provinces is evident from Table **30**, which gives the per capita ordinary revenue and expenditure for various fiscal years from 1871 to 1933. This, however, is not to be taken as evidence that the larger services rendered to the public in the provinces west of the Ottawa river, are not worth what is being paid for them.

For the half-century subsequent to Confederation, the provincial accounts, published by each Government according to its own system of accounting, were quite incomparable as among the provinces, a fact much regretted by students of provincial public finance. Upon the creation of the Dominion Bureau of Statistics in 1918, its Finance Branch undertook the work of placing the various provincial public accounts on a comparable basis, correlating, for example, the revenue derived from succession duties, taxation of corporations, sales of public lands, royalties on forest, mineral and fisheries products, as well as the expenditures on such services as agriculture, civil government, education and public works. As the result of the Bureau's exhaustive analysis of the provincial public accounts, a summary statement of the ordinary receipts and expenditures of the Provincial Governments appeared for the first time in the 1919 Year Book. The various items of receipts and expenditures were classified under appropriate headings and a uniform terminology was adopted. From these statements it is possible to ascertain the amounts received and expended in each year under the respective headings for each province, as well as for the provinces collectively. The figures for the years 1916 to 1920 will be found on pp. 680-685 of the 1921 Year Book, those for 1921 on pp. 786-791 of the 1922-23 Year Book and those for 1922 to 1926 on pp. 836-841 of the 1927-28 Year Book.

The Bureau is at the present time making a more extensive analysis of the finances of the provinces, including capital and trust accounts as well as ordinary revenue and expenditure. This analysis is based on a uniform classification adopted at a recent conference between provincial treasury officials and the Dominion Bureau of Statistics.

The following data, in so far as 1933 is concerned, are given on the new uniform basis. Similar statistics covering 1932 have been secured from all provinces except Ontario. At the time of going to press the latter are undergoing revision but it is expected that they will be available in the near future.

Subsection 1.—Provincial Revenues and Expenditures.

Ordinary Revenues and Expenditures.—The total ordinary revenues of the nine provinces for their latest fiscal years for which final data are available, ended in 1933, were $184,877,414 and in 1931 were $179,143,480, as compared with $188,154,910 in 1930, $183,598,024 in 1929, $132,398,729 in 1925, $92;653,023 in 1920 and $50,015,795 in 1916. The total ordinary expenditures in 1933 were $200,528,217 and in 1931 were $190,754,202, as compared with $184,804,203 in 1930, $177,542,192 in 1929, $136,648,242 in 1925, $88,250,675 in 1920 and $53,826,219 in 1916. Thus the total ordinary revenues of the provinces show an increase of 270 p.c. in the short space of 17 years, while the total ordinary expenditures show an increase of 273 p.c. in the same period.

Considering individual provinces, the largest revenue for 1933 is that of Ontario, $67,800,543, Quebec being next with $33,324,760, and British Columbia third with $23,333,115. As regards total expenditures for the same year, that of Ontario was highest, $67,325,117, Quebec second with $40,165,668, and British Columbia third with $26,169,492. In 1933 British Columbia raised the largest revenue per head of population, *viz.*, $32·77, while Quebec had the lowest, $11·22. (For statistics of revenue and expenditure in 1933, see Tables **27** and **28**, and for figures

showing the absolute and per capita growth of ordinary revenue and expenditure see Tables **29** and **30**.)

The Growth of Provincial Taxation.—Whereas in earlier years the Dominion subsidies, together with the revenues arising out of the natural resources of the provinces and from fees for specific services rendered to the citizens; nearly sufficed to cover the whole expenses of government and rendered a resort to taxation for provincial purposes practically unnecessary in most of the provinces, the great increase in the functions of government since the commencement of the present century has put an end to this state of affairs. The aggregate amount of taxation for provincial purposes in the fiscal years prior to 1916 is unfortunately not available. Since that time provincial taxation has increased, according to the recently amended classification made in the Dominion Bureau of Statistics, from $12,521,816 in 1916 to $74,323,467 in 1933, exclusive of motor vehicle licences, liquor traffic profits, and other licences and permits, etc., an almost six-fold increase in 17 years.

The increase in the use of automobiles, both for commercial purposes and pleasure, is clearly demonstrated by the growing revenues from licences and permits issued by the Provincial Governments. In 1921 the total revenue of all provinces from automobile licensing amounted to $7,857,751. It increased to $9,290,900 in 1922, to $13,020,607 in 1925, to $15,822,339 in 1927, to $21,735,827 in 1929, decreasing to $20,321,307 in 1930, to $19,952,575 in 1931, and increasing to $20,050,667 in 1933.

The growth of revenue from the gasolene tax still further demonstrates the increasing use of motor vehicles. In 1923 Manitoba and Alberta were the only provinces showing a gasolene-tax revenue, the total being $280,404. In 1924 the five provinces of Prince Edward Island, Quebec, Manitoba, Alberta and British Columbia collected gasolene-tax revenue to the amount of $559,543, while in 1925 the same provinces, with Ontario added, collected $3,521,388. In 1926 all provinces, except Saskatchewan, collected gasolene taxes to the amount of $6,104,716, in 1927 to $7,615,907 and in 1928 to $9,151,735; thereafter, gasolene taxes were collected in all provinces and amounted to $17,237,017 in 1929, $20,956,590 in 1930, $23,850,067 in 1931 and $25,931,480 in 1933. The higher yields in recent years were partly due to higher rates of taxation.

The provincial revenues from the liquor traffic increased considerably between 1925 and 1930, but subsequently declined until 1933. The adoption of government control of the sale of liquor in one province after another, until now it exists in all but Prince Edward Island, where prohibition is still in force, has resulted in trading profits, licensing revenues, and permit fees, all of which have swelled the provincial revenues. Prior to the adoption of government control such revenues were not available to the provinces. In 1925 the total revenue collected by all provinces from the liquor traffic was $8,964,824; in 1926 it was $11,609,392, increasing to $16,793,656 in 1927. In 1928, it amounted to $22,755,212, in 1929 to $27,599,687, in 1930 to $33,248,056, in 1931 to $32,128,693 and in 1933 to $16,160,980. The method of control varies somewhat as between the provinces. In the majority of cases there are independent commissions or boards to administer the provincial Liquor Traffic Acts, but the accounting and trading profits are shown somewhat differently in the various provincial public accounts reports.*

Fiscal Years of the Provinces.—The fiscal years of the provinces end as follows: P.E.I., Dec. 31; N.S., Sept. 30; N.B., Oct. 31; Que., June 30; Ont., Oct. 31; Man. and Sask., April 30; Alta. and B.C., Mar. 31.

* See the report of the Dominion Bureau of Statistics on "The Control and Sale of Liquor in Canada".

[1]Includes capital revenue for lands which cannot be separated. [2]Includes capital expenditure which cannot be separated. [3]For eight months. [4]Certain minor items, amounting to about $600,000, shown in previous years as ordinary receipts and expenditures have been transferred to the extraordinary classification in the 1930 provincial accounts report. [5]Exclusive of interest paid by Hydro and other commissions. [6] Subject to revision. This figure is taken from the Public Accounts of Ontario.

29.—Ordinary Revenues and Expenditures of the Provincial Governments for their respective fiscal years ended in the census years 1871-1911 and in each year from 1916 to 1933—concluded.

NOTE.—For provincial ordinary revenues and expenditures in all other provincial fiscal years since Confederation, see 1932 Year Book, pp. 734-736.

[1]Includes small sums of capital revenue and expenditure which cannot be separated. [2]Includes sinking funds taken from capital expenditure (expenditure out of income). [3]See footnotes to figures for individual provinces when using these figures. [4]Six months. Fifteen months ended Mar. 31, 1928.

30.—Ordinary Revenues and Expenditures of Provincial Governments per Head of Population for their respective fiscal years ended in the census years 1871-1911 and in each year from 1916 to 1933.

NOTE.—As this table is based upon Table 29, those using it should refer to that table for totals and for explanatory notes. Per capita figures are calculated on the basis of the population figures given on p. 164.

Subsection 2.—Provincial Debts and Assets.

In former issues of the Year Book statements were given showing the total direct liabilities of Provincial Governments and a detailed statement of the provincial assets. In accordance with decisions reached at the Conference mentioned on page 916 a uniform balance sheet for the provincial fiscal years ended in 1933 is now presented. In accordance with up-to-date accounting practice, the balance sheet is divided into three distinct categories, capital, income or current, and trust fund account assets and liabilities.

In addition to this the total indirect or contingent liabilities of each province are shown, though they do not in any way affect the balance sheet transactions.

For Prince Edward Island, the total capital assets are not balanced with the total capital liabilities, largely owing to the exclusion of any detail showing non-revenue earning assets such as roads, bridges, public buildings, etc.

The Quebec Public Accounts report for 1933 did not show a balance sheet though the 1934 report does include such a statement. The statistics here shown are as supplied to the Dominion Bureau of Statistics by the Treasury Department.

As some of the items may be vague in meaning the following notes will be of assistance in studying the balance sheets presented:

Capital Assets.—

Available or Realizable Assets: "Loans and advances" are fully secured. "Other Government Utilities" in the case of Nova Scotia represent largely highways, together with other capitalizations, whereas under "roads" the figures given represent only machinery replacement.

General Assets, Non-revenue Bearing: In Ontario, provincial buildings and lands, northern development (roads and farms), rural power-transmission-lines bonus, municipal works unemployment relief and other smaller miscellaneous items are included under "roads." In New Brunswick "public buildings" do not include Parliament buildings, upon which no valuation has been set up. In Saskatchewan bridges are included in "roads". "Universities and Colleges" needs further explanation. In Nova Scotia, New Brunswick, Quebec and Ontario no valuations are shown as these provinces do not consider such universities and colleges as capital assets of the provinces where situated, though government aid for maintenance may be found in the annual statements of educational expenditure. Manitoba's valuations are inclusive of educational properties, other than universities and colleges controlled by the government. In Saskatchewan, the university is included in public buildings. In Alberta the valuation shown includes advances and redemption of debentures. The British Columbia university valuation is included in capital losses, representing $3,678,278 written off in 1929-30.

Capital Liabilities.—

"Dominion Government Debt Allowance" represents housing loan only for Nova Scotia.

"Reserves or Surpluses" are not applicable against any specific assets.

[2] Indirect or Contingent Liabilities do not enter the balance-sheet transactions; they include guarantees of bonds of, and loans to, railways, municipalities, and other organizations.

Bonded Indebtedness of the Provinces.—Of the total liabilities of the provinces the major part is represented by bonded debt owing to the public in Canada and abroad. The total gross bonded debt amounted to $1,224,372,824 in 1933 as compared with only $218,875,927 in 1916, an increase of over $1,000,000,000 in the 17 years. In addition to this bonded debt there were treasury bills outstanding on provincial accounts amounting to $109,449,983 for 1933. Figures of bonded debt for this and previous years to 1916 are given in Table **32.** The rapid rise in the bonded debt of the provinces from $218,875,927 in 1916 is accounted for largely by the development of public ownership of utilities (such as the "Hydro" in Ontario), the extension of the highways and good roads systems in all provinces (highway debentures outstanding in 1933 accounting for $438,000,000 of the provincial debt), and the requirements for the promotion of industrial activities and public and social welfare. These demanded heavy expenditures which could not easily be met out of current revenue. The borrowings, while increasing the public debt, are in the main considered justifiable, as the public utilities are in most cases meeting from their revenues the interest on indebtedness incurred in their construction, and the provincial assets generally are sound enough to take care of capital investment for other services which are necessary to develop the country.

[1] Liabilities statement is for April 30; this amount includes $500,000 due May 1. [2] Subject to revision. [3] Revised since the publication of the 1933 Year Book.

Interest Payments and Receipts of the Provinces.—The current burden of a debt in the case of a continuing organization is represented by interest payments, which may be offset in whole or in part by interest received on loans either to provincially-owned public utilities or to corporations or individual citizens. In a country where provincial public policy varies widely with regard to public ownership, it appears desirable to include a statement showing, for each province, the gross interest payments, the interest receipts and the net interest payments. This information is given for the provincial fiscal years ended in 1933 below:—

Province.	Gross Interest Paid.	Interest Received.	Net Interest Paid.	Net Interest Paid per Capita.
	$	$	$	$
Prince Edward Island	207,367	-	207,367	2·33
Nova Scotia	3,060,054	920,676	2,139,378	4·10

Section 3.—Municipal Public Finance.*

The existence of local self-governing units has always been characteristic of democratic societies, and nowhere more so than in Canada. The struggle for responsible government was naturally accompanied by an agitation for local self-government in the cities and towns of Canada and, after responsible government had been conceded, a complete system of municipalities was established throughout the old Province of Canada by the Municipal Act of 1849.† Under the division of powers made by the British North America Act between the Dominion and the Provincial Governments, legislation regarding municipal government, being a local matter, was naturally assigned to the provinces, which differ considerably with regard to their types of municipal organization. Thus in Prince Edward Island the only incorporated municipalities are the city of Charlottetown and seven incorporated towns. In British Columbia seven of the 33 cities have fewer than 1,000 people, while there are no towns at all and only 17 villages; again, in the same province the rural districts are mainly administered from the provincial capital, there being only 28 rural municipalities. Finally, in Saskatchewan and Alberta there exist local improvement districts, areas which have not as yet been organized into rural municipalities, and where the taxes are levied, collected and expended by the Provincial Governments. Such districts, however, may be regarded as on the way to becoming self-governing rural municipalities and their statistics are therefore included in Table **33**, which gives statistics of the numbers and types of municipalities in 1932.

*Revised by Col. J. R. Munro, Chief of the Finance Branch of the Dominion Bureau of Statistics. This Branch issues statements on "Financial Statistics of Urban Municipalities of 10,000 Population and Over", on "Bonded Indebtedness of Municipalities" and on "Assessment Valuations of Municipalities". For a list of publications see Chapter XXIX, Section 1, under "Finance", (p. 1155).

†For a brief outline of the rise of the municipal system of Ontario, see 1922-23 Year Book, p. 108.

[1]There are 44 counties in all, geographically, but a number are united for municipal purposes.
[2]Officially known as "townships".
[3]Nova Scotia has 18 counties, some of which are "municipalities", while others are divided into "municipalities".

Municipal Revenue from Taxation.—The following statement showing receipts from current taxes, arrears and penalties, though incomplete, is the only information available dealing with this important subject.

MUNICIPAL TAXATION RECEIPTS, BY PROVINCES, 1932.

	$		$
Prince Edward Island (Charlottetown only)	145,830	Manitoba (tax collections)	17,290,888
New Brunswick (St. John, Moncton and Fredericton only)	2,441,063	Saskatchewan (tax collections)	17,616,414
Nova Scotia (incl. prov. highway tax for towns and rural municipalities)	6,613,674	Alberta (current tax collections)	12,032,471
Quebec (tax collections)	79,612,584	British Columbia (land, road and poll taxes)	17,089,972
Ontario (taxation and rates)	131,755,503	Total	284,598,399

Municipal Assessments.—Throughout the Dominion, the chief basis of municipal tax revenue is the real estate within the limits of the municipalities; though in certain provinces personal property, income, and business carried on are also taxed. General taxes are normally assessed at the rate of so many mills on the dollar of the assessed valuations. In the Prairie Provinces, the values of improvements made to real property are often rated at a very low figure, *e.g.*, in Saskatchewan, where the taxable valuations of buildings are about 12 p.c. of the taxable valuations of lands, and in Alberta, where they are about 28 p.c. of the taxable valuations of lands, as shown in Table **34.**

There are various reasons for fluctuations in assessment valuations, due to differences in laws and varying practices with regard to assessment as among provinces, as among classes of municipalities and as among municipalities of the same class from year to year. Such matters are more fully dealt with in the special report of the Bureau of Statistics on "Assessment Valuations by Provinces", obtainable on request.

Land valuations in the West, which in earlier years were somewhat inflated, have of late been assessed on a sounder basis, and in some provinces the Equalization Boards have placed a more equitable valuation on lands as among the various rural municipalities.

[1]Less land and buildings for the Maritime Provinces, Quebec and Manitoba. [2]In N.S. personal property and income assessments for cities are for Sydney only. [3]Includes exemptions for municipality of Cumberland, Nova Scotia. [4]Local Improvement Districts not included in 1929, 1931 or 1932 in Alta. [5]In addition, assessments for schools only in Ontario were: townships $2,730,538, towns and villages, $23,719,597 and cities $92,401,140 in 1929; townships $3,125,660, towns and villages $22,347,193 and cities $86,780,452 in 1930; townships $4,486,690, towns and villages $20,499,195 and cities $93,816,472 in 1931 and townships $4,976,492, towns and villages $18,249,670 and cities $86,803,023 in 1932. [6]$256,400 is by special franchise. [7]$484,736 is by special franchise. [8]$441,660 is by special franchise. [9]Includes special franchise (amount not stated). [10]One municipality showing $80,000 odd assessment for 1931 did not report for 1932.

Bonded Indebtedness.—Like other Canadian governing bodies the municipalities of the greater part of Canada borrowed rather freely during the boom period of 1900-12, and again during the nineteen-twenties. The bonded indebtedness of Ontario municipalities rose from $153,568,409 in 1913 to $504,755,977 in 1932, while that of Quebec municipalities increased from $173,720,141 in 1915 to $463,891,860 in 1932, and a proportionate increase took place in other provinces. The recent growth in the bonded indebtedness of all classes of municipalities is shown by provinces in Table **35.** The figures show that there was an increase in 1932 over 1931 in each of the provinces with the exceptions of Alberta and British Columbia. In Saskatchewan, net debenture debt is shown for all municipalities in 1919 and from 1920 on the statistics represent gross debenture debt. In Alberta in the earlier years, figures represent principally net debenture debt but from 1929 on gross debenture debt is shown. All other provinces give gross total debenture debt throughout.

[1]Census of 1931. [2]Arrears of taxes and sinking fund. [3]Debentures outstanding.

Section 4.—National Wealth and Income.

Subsection 1.—National Wealth.

There are several methods of computing national wealth, *i.e.*, the aggregate value of the public and private property within the nation apart from undeveloped natural resources. Perhaps the most familiar of these methods is that of working back to capital values through income tax returns, but this can be applied only in countries where small incomes are assessed for income tax. A second method is that of estimation from probate returns, the value of the estates of deceased persons being regarded as representative. A third is that of a complete census, based upon a canvas of the individual. In the accompanying tables a fourth method, namely, the so-called "inventory" method, is employed; it consists in totalling the amounts known from various sources to be invested in agriculture, manufactures, dwellings, etc.

Whatever method is used, difficulty arises when we try to reduce all the things which go to make up wealth (things which once created are not themselves subject to violent change) to a common denominator. Estimates of national wealth must always be expressed in terms of the national currency and thus normally in terms of gold dollars. Yet the purchasing power of the currency unit is always fluctuating and since 1929 has increased by more than 50 p.c. in terms of wholesale prices. Even in 1930, the average index number of wholesale prices was down by nearly 10 p.c. from 1929, while in December of that year the average index number of wholesale prices was 19 p.c. lower than in the same month of 1929.

The effect of such drastic reductions in values is first felt by the commodities which are being currently produced and, through these commodities, the dollar value of production is diminished and consequently the national income of a country where most people are producers. Ultimately a persistent decline of this character affects the capital values of real estate, buildings, machinery, etc., and its influence is then felt in a reduction in the national wealth as stated in dollars. The 1929 estimate, which is considered to represent values in that year with approximate accuracy, is the latest which has been compiled by the Bureau of Statistics and the table below shows the national wealth on that basis.

The survey for 1929 placed the estimated aggregate of the tangible wealth of the Dominion, exclusive of undeveloped natural resources, at $30,840,000,000 as compared with $29,630,000,000 in 1928, $27,668,000,000 in 1927, $26,691,482,000 in 1926, $25,673,174,000 in 1925 and $22,195,302,000 in 1921. These figures, however, are not exactly comparable, in view of certain improvements and additions that have been made in the method of estimation and in the items included. An increase of $1,210,000,000 was shown in the national wealth in the year 1929, and of over $8,600,000,000 in the eight years 1921 to 1929.

Aggregate and Per Capita Wealth of the Provinces, 1929.—As regards the provincial distribution of wealth, Ontario ranked first with estimated aggregate wealth of $10,628,000,000 or 34·46 p.c. of the total and Quebec second with estimated wealth of $8,265,000,000 or 26·8 p.c. of the whole. Saskatchewan was third, with estimated wealth of $3,047,000,000 or 9·88 p.c. of the total for the Dominion.

While Ontario led in absolute wealth, the western provinces came first in per capita wealth; British Columbia held first rank with a per capita wealth of $4,012; Alberta second with $3,518; Saskatchewan third with $3,451 and Manitoba sixth with $2,910. These figures may be compared with $3,188 and $2,982, the per capita wealth of Ontario and Quebec respectively, and $3,076, the per capita wealth for the whole Dominion. Further details are furnished in Table **37**.

As the statistics of population and wealth for Yukon are uncertain, the per capita estimate of wealth is open to question and has not been shown.

37.—Provincial Distribution of the National Wealth of Canada, with Percentage and Per Capita Analyses, 1929.

NOTE.—Figures for 1921 and 1925 are given on pp. 849-850 of the 1927-28 Year Book, for 1926 on p. 827 of the 1930 Year Book, for 1927 on p. 870 of the 1931 Year Book and for 1928 on p. 870 of the 1933 Year Book.

Province.	Estimated Wealth.	Percentage Distribution of Wealth.	Estimated Population June 1.	Percentage Distribution of Population.	Wealth per capita.[3]
	$	p.c.	No.	p.c.	$
Prince Edward Island	164,000,000	0·53	88,000	0·88	1,864

Yukon	17,000,000	0·06	4,000	0·04	[2]
Totals	**30,840,000,000**	**100·00**	**10,027,000**[1]	**100·00**[1]	**3,076**

[1]Includes 7,000 population in the Northwest Territories or 0·07 p.c.
[2]As the statistics of population and wealth for Yukon are uncertain, the per capita estimate of wealth is open to question and has not been shown. [3]Per capita figures are worked out on the basis of revised populations, see p. 164.

Wealth of Canada, by Items, 1929.—In the items included in Table **38**, all duplications have been excluded. In any consideration of the individual items it should be remembered that each item covers only the portion of wealth which is mentioned in the description of the item. For example, the item of fisheries includes only capital invested in primary operations, while capital invested in fish-canning and -curing establishments is included under manufactures, though it might also be considered as part of the wealth connected with fisheries. In the same way, the items for manufactures do not include lands and buildings in urban centres, which are shown under the heading of urban real property.

38.—Estimate of the National Wealth of Canada, with Percentage and Per Capita Distribution of Component Items, 1929.

NOTE.—For discussion of these items, see p. 871 of the 1933 Year Book.

Classification of Wealth.	Aggregate Amount.	Percentage of Total.	Average Amount per head of Population.[3]
	$	p.c.	$
Farm values (land, buildings, implements, machinery and live stock)	6,308,353,000	20·45	629·14
Agricultural products in the possession of farmers and traders	1,631,124,000	5·29	162·67
Totals, Agricultural Wealth	7,939,477,000	25·74	791·81
Mines (capital employed)	867,021,000	2·81	86·47
Forests (estimated value of accessible raw materials, pulpwood and capital invested in woods operations)	1,877,000 000	6·09	187·19
Fisheries (capital invested in boats, gear, etc., in primary operations)	33,935,000	0·11	3·39
Central electric stations (capital invested in equipment, materials, etc.)	554,327,000	1·80	55·28
Manufactures (machinery and tools, and estimate for capital in rural lands and buildings, duplication excluded)	1,418,040,000	4·60	141·42
Manufactures (materials on hand and stocks in process, duplication excluded)	837,805,000	2·72	83·55
Construction, custom and repair (estimate of capital invested in machinery and tools and materials on hand)	137,685,000	0·45	13·73
Trading establishments (estimate of the value of furniture and fixtures, delivery equipment and materials on hand)	1,136,291,000	3·68	113·32
Steam railways (investment in road and equipment)	3,153,351,000	10·22	314·49
Electric railways (investment in road and equipment)	240,111,000	0·78	23·95
Telephones (cost of property and equipment)	291,589,000	0·95	29·08
Urban real property (assessed valuations and exempted property and estimate for undervaluation by assessors and for roads, sewers, etc)	8,251,011,000	26·75	822·88
Canals (amount expended on construction to Mar. 31, 1930)	241,946,000	0·79	24·13
Harbours (approximate amount expended to Mar. 31, 1930)[1]	367,488,000	1·19	36·65
Shipping (including aircraft)[2]	149,306,000	0·48	14·89
Imported merchandise in store (estimated at one-half imports during 1929)	649,477,000	2·11	64·77
Automobiles (estimate of the value of automobiles registered)	758,424,000	2·46	75·64
Highways, etc.[1]	364,896,000	1·18	36·39
Household furnishings, clothing, etc. (value estimated from production and trade statistics)	1,370,000,000	4·44	136·63
Specie, coin and other currency held by the Government, chartered banks and the general public	201,030,000	0·65	20·06
Grand Totals	**30,840,210,000**	**100·00**	**3,075·72**

[1]This class of wealth was not included in estimates published for previous years in earlier editions of the Year Book.

[2]The total for "shipping" includes, for the first time, an estimate for aircraft amounting to $2,398,000 for 1929.

[3]See Table **37** for the revised estimate of population upon which these per capita figures are based.

Analyses by Provinces and Classes of Wealth.—In Table **37** on pp. 873-874 of the 1933 Year Book will be found detailed statistics of the wealth of each province by leading items. Again the suggestive character rather than the strict accuracy of such data must be emphasized. The specie holdings, for instance, are distributed among the provinces according to their populations, since they are an asset of Canada as a whole rather than of the particular locality in which they happen to be deposited.

Subsection 2.—National Income and Income Tax Statistics.

"The annual labour of every nation is the fund which originally supplies it with all the necessaries and conveniences of life which it annually consumes, and which consist always either in the immediate produce of that labour, or in what is purchased with that produce from other nations."—Adam Smith. This is perhaps the earliest modern definition of *national income*, and is still among the best, when it is interpreted in accordance with modern knowledge regarding the balance of international payments and the necessity of keeping productive equipment in running order. It must also be remembered that while the national income consists in goods and services of the most varied kinds, its total amount can be stated only in terms of money.

The Difficulty of Measuring National Income.—The precise statistical measurement of the national income is, however, a matter of insurmountable difficulty, and the most indefatigable research into all the relevant statistics, in order to establish a figure of national income, must always leave an appreciable margin of error. Indeed, it is no easy matter even for an individual to establish an accurate money figure as representing his *total* income, especially where he has to include in that total income, besides his cash income, an allowance for the rental value of his (owned) house and his durable belongings therein, together with an allowance for the money value of the commodities produced and consumed within the family, (such as eggs and garden produce) and of the services, ordinarily bought and sold, but rendered gratis within the family circle. Yet this is the only way of obtaining the total income of the family. While such income, not received directly in money, but in commodities produced and services rendered, is not, except for house and furniture rent, an important percentage of the family income in most urban families, it constitutes a very important part of the income of most rural families, who to a much larger extent consume the commodities which they themselves produce. For this reason, indeed, comparisons between the incomes of urban families and rural families are often misleading, through not allowing for the non-money income of the latter. Certainly most people never think of their non-money income as income at all, and would never dream of putting the rental value of their owned homes into their income tax returns. Indeed, the income tax authorities of Canada do not expect them to do so.

Any difficulties experienced in expressing the total income of an individual as a single figure are multiplied a million-fold in any attempt to express the total of the national income as a single figure. The individual and corporate incomes which are to be combined into this grand total *without duplication*, are of such a heterogeneous character that any figure which may be given as the grand total of the national income must include some margin of error. For example, the total of the national income must include the rental value of owned houses, and the value of the commodities raised on the 728,000 farms of Canada and consumed on the farms where they are produced, the value of the flowers raised in a million private gardens, and the value of innumerable services which in special cases are performed within the family, or by the individual for himself, although more ordinarily bought and sold.

Yet the labour of the housewife, performed in her own house, must be left out of account as one of the imponderables, however valuable it may be in fact. For the estimate of the national income to be of any practical use it must be based upon the conventions and practices of the existing economic system.

Again, fluctuations in the general level of prices, which have been so great in the past few years, have necessarily affected the money value of the national income. In these circumstances, it is absolutely essential that any estimate of the national income should be definitely stated as for a particular year, so that the national income for each year may be related to the price levels prevailing in that year and corrected by the price levels of that year. Thus, when the official index number of wholesale prices is taken to correct the estimate of the money value of the national income for the decline of prices, it is found that $66.70 bought on the average as much in commodities in 1932 as $95.60 bought in 1929. Then, if the money value of the national income had declined by one-half in these three years, the correction for the drop in prices would reduce the decline in the *real* national income of commodities and services to 28.3 per cent, on the assumption that the prices of services rendered declined proportionately with the prices of commodities included in the index number of wholesale prices. Thus on the assumption that the money value of the national income in 1932 was only one-half of that of 1929, the *real* national income would be nearly 72 per cent of that of 1929. Much might be said here on the effect of falling prices in discouraging the actual production of commodities and the rendering of services, thus reducing the *real* national income, and conversely on the effect of rising prices in stimulating the actual production of commodities and rendering of services and thus increasing the *real* national income.

The industries concerned with the production of *form* utilities employed in 1931 approximately five-eighths of all gainfully occupied Canadians and produced commodities to the net value of approximately $2,105,000,000 in 1932, as shown in the General Survey of Production at pp. 232-233 of this volume. Then, on the assumption that the remaining approximately three-eighths of the gainfully occupied Canadians who are engaged in the transportation and communications industries, in wholesale and retail trade, in finance and in personal and professional service, are proportionately as productive on the average as those who engage in the production of *form* utilities, we attain a total figure of what labour, assisted by capital, has presumably been able to produce in the course of a calendar year. This figure has for the past twelve years been published in the Dominion Bureau of Statistics' Annual Survey of Production, and in the Canada Year Book.

On the basis of the annual Census of Industry and the occupational distribution of the population as ascertained at the Decennial Censuses of 1921 and 1931, the grand total value of the national production in each year from 1920 to 1932 inclusive has been approximately estimated as follows. 1920, $5,523,000,000; 1921, $4,215,000,000; 1922, $4,520,000,000; 1923, $4,696,000,000; 1924, $4,643,000,000; 1925, $5,178,000,000; 1926, $5,600,000,000; 1927, $6,101,000,000; 1928, $6,342,000,000; 1929, $6,072,000,000; 1930, $5,150,000,000; 1931, $4,000,000,000; 1932, $3,403,000,000.

39.—Total and Per Capita Production of the Gainfully Occupied Population in 1932, Based upon the Survey of Production, 1932, and the Percentage of Persons Occupied in the Production of Form Utilities as Found at the Census of 1931.

Province or Territory.	Net Production.	Percentage of Gainfully Occupied Engaged in Production of Form Utilities.	Estimated Amount Produced by All Gainfully Occupied Persons.	Production per Capita.

[1] Dominion average used.

The above table has the defect of making no deduction for the cost of the fuel and the power required for the carrying on of the productive process in the manufacturing industries, these two items amounting to $96,354,956 in 1930 and perhaps $75,000,000 in 1932. On the other hand, it makes no allowance for unrecorded production in such sidelines as the raising of garden produce, poultry, etc., by persons not deriving their main livelihood from such activities. (The value of farm produce raised elsewhere than on farms was secured at the Census of 1931 and was found to total nearly $19,000,000 in 1930.) Again, the table makes no allowance for the difference between the producer's price of farm commodities and the price actually received by the farmer who brings in his produce to a farmers' market or peddles it along city streets or sells it to a peddler with no fixed store who undertakes to do the marketing for him. Finally, the table makes no allowance for the money value of the production of persons not ordinarily considered as gainfully occupied, such as the production of school-boys outside of school hours and of college students in their vacations. On the whole, it is felt that the omission of the value of such activities fully makes up for the inclusion of the figures referred to above. This leaves us with the figure of approximately $3,403,000,000 to represent the grand total value of the productive activities of the Canadian people in 1932.

However, Canada is on balance a debtor country, and in order to ascertain her net national income, deduction must be made from her national production of the amount required to meet the *net* interest payments due to outsiders. Such *net* interest and dividend payments are estimated for 1932 in our "Balance of International Payments" at $192,000,000, payments on this score reaching $248,000,000 as against receipts amounting to $56,000,000. When this outward balance of interest and dividend payments is deducted from the $3,403,000,000 of the preceding table, the remainder is $3,211,000,000, which may be considered as the gross national income of the Canadian people in 1932. It is subject to certain deductions required to maintain the national productive equipment in an efficient state.

Incomes Assessed for Income Tax in Canada.*—In those countries of the world where an income tax has been established for a considerable time the figures of the assessed income have been generally accepted as furnishing a guide

*This material has been revised by the Income Tax Branch of the Department of National Revenue.

both to the amount and to the distribution of the total national income by classes. Estimates of the national income, based upon income tax statistics, have been published, for example, in the United Kingdom and in the United States.

The war income tax was introduced into Canada in 1917. Under the Income War Tax Act, the returns of the incomes of individuals and corporations are filed in the year following the earning of the incomes. Further, since the fiscal year ends on Mar. 31, the bulk of the receipts from the income tax usually comes in during the first two or three months of the next following fiscal year. Thus the income tax received in the fiscal year ended Mar. 31, 1934, represents, in the main, income tax collected on 1932 income and the income tax collected in the fiscal year ended 1933 represents in the main 1931 income. It is important that these facts should be kept in mind when considering income assessed in different years. Further, the particular provisions of the income tax existing at any particular time and the amendments extending or contracting the scope of the income tax by raising or lowering the limit of taxable income or increasing or lowering the allowances for children, etc., should also be borne in mind in the consideration of the following tables. Among these, Table **40** gives the grand total income of individuals and corporations assessed for the purpose of income war tax for the past fourteen years, while Table **41** gives this income by provinces for the past five years and Table **42** shows the amount of income tax collected by provinces in the past five years. Tables **43** and **44** analyse the payments of income tax in the past four years by size of income class and by occupation of the taxpayer, respectively.

Subsection 3.—Outside Capital Invested in Canada and Canadian Capital Invested Elsewhere.*

An estimate of the outside capital invested in Canada and the Canadian capital invested outside of the Dominion is prepared by the Internal Trade Branch of the Dominion Bureau of Statistics. Any estimate of this character is liable to a margin of error, but the utmost care has been taken in the computation and it is believed that the figures approximate to actual conditions. More complete information is being obtained from year to year, and a comprehensive revision and extension of the statistics on this subject is now in progress. In the meantime, the figures given are of the latest available date, *viz.*, Jan. 1, 1931; figures for previous years will be found on pp. 879-880 of the 1933 Year Book.

It is estimated that the total investment of British and foreign capital in Canada on Jan. 1, 1931, was $6,477,879,000. Of this sum, $2,204,857,000 was British capital, $4,107,803,000 was from the United States and $165,217,000 from other countries. Though these totals are large, it should be remembered that the national wealth of the Dominion in 1929 is estimated at $30,840,210,000 exclusive of the value of those undeveloped natural resources in which some of the outside capital is invested.

It must also be borne in mind that Canadians have invested large amounts of capital abroad. The Bureau estimates that Canadian investments in other countries amounted to $1,831,310,000 at the beginning of 1931, or nearly 30 p.c. of the amount of outside investments in Canada. Of this $1,047,285,000 was placed in the United States, $84,826,000 in the United Kingdom and $699,198,000 in other countries. (Table **47.**)

*Revised by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics. For a list of the publications of this Branch, see p. 1154.

It is estimated that the amount of capital invested in Canada is $17,500,000,000. This sum includes the bonded indebtedness of Dominion, Provincial and municipal governments, investments in railways, all manufacturing concerns, mines and metal industries, public utilities, trading establishments, finance, insurance, land and mortgages. It does not include private capital in domestic enterprises such as farms, homes, etc. Of this sum it is estimated that 65 p.c. or $11,500,000,000 is owned in Canada; 21 p.c. or $3,725,000,000 in United States; 13 p.c. or $2,228,000,000 in the United Kingdom; 1 p.c. or $171,000,000 in other countries.

If the basis of comparison is total national wealth, British and foreign investments decrease in significance. Canada's national wealth in 1930 was probably $30,000,000,000; net British and foreign investments in Canada were about $4,647,000,000, or 15½ p.c. of the total.

46.—Estimated British and Foreign Investments in Canada, Jan. 1, 1931.

CHAPTER XXII.—CURRENCY AND BANKING; LOAN AND TRUST COMPANIES.

Section 1.—Canada's Monetary System.

Historical.—Early trade in Canada was carried on by barter, which at times resulted (*e.g.*, in transactions between Indians and fur traders) in the adoption of beads, blankets, etc., as recognized media of exchange. Later, during the French period in Canada, while barter still formed perhaps the most important means of exchange between individuals and merchants, a more or less satisfactory currency system developed. Beaver and other furs, tobacco and wheat were at times used as substitutes for currency, the last named being at one time a legal tender. A makeshift currency system was also developed during the French *régime* when playing cards, stamped with a value and redeemable yearly on the receipt of bills of exchange on Paris, came into circulation. Other paper money was also issued, and the total amount outstanding at the time of the cession was estimated at 80,000,000 livres, which was nearly all lost to its holders.

The British Government next sought to establish a uniform standard of colonial currency, but since at this time French coinage again began to come into circulation and the Spanish dollar also rivalled the English shilling as the most common medium of exchange, this was not universally possible. English sovereigns were overrated in terms of dollars in an endeavour to encourage their circulation. A rate of 5s. to the dollar was set in Halifax and was in use in government accounting systems, while in Montreal, York currency (the rates prevalent in New York), giving the dollar an exchange value of 7s. 6d. or 8s., was in common use.

Canadians again became more or less familiar with the characteristics of paper money as a result of the experiences of the various neighbouring Northern States during the first half of the nineteenth century. During the War of 1812 this familiarity was increased by the establishment of an army bill office, issuing bills of various denominations, redeemable on presentation. The growing volume of trade between Canada and the United States also resulted in a tendency toward a decimal coinage, and in 1853 a measure was passed providing for the adoption of a decimal currency, with a dollar equivalent to the United States dollar; the British soverign was made legal tender at $\$4{\cdot}86\frac{2}{3}$. An Act of 1857 requiring all government accounts to be kept in dollars and cents came into force on Jan.1, 1858; the formal adoption of decimal currency in the Province of Canada dates from that time.

By the Uniform Currency Act of 1871 (34 Vict., c. 4), the decimal currency was extended throughout the Dominion, the British sovereign was made legal tender for $\$4.86\frac{2}{3}$ and the United States eagle legal tender for $10, while authority was given to coin a Canadian $5 gold piece. No Canadian gold coinage was issued, however, prior to the establishment of the Canadian branch of the Royal Mint in 1908, the first coins struck being sovereigns similar to those of the United Kingdom, but with a small "C" indentifying them as having been coined in Canada. In May, 1912, the first Canadian $10 and $5 gold pieces were struck, but the Canadian gold coinage has so far been limited in amount, since Canadians have generally preferred Dominion notes to gold for use within the country and, when gold is needed for export, bullion or British and United States gold coin serve the purpose equally well.

The Royal Canadian Mint.—The Ottawa Mint, established as a branch of the Royal Mint under the (Imperial) Coinage Act, 1870, and opened on Jan.2, 1908, was, by 21-22 Geo. V, c. 48, constituted a branch of the Department of Finance, and by the Proclamation of Nov. 14, 1931, issued under Section 3 of that Act, it has since Dec. 1, 1931, operated as the Royal Canadian Mint. At first the British North American provinces, and later the Dominion of Canada, obtained their coins from the Royal Mint in London or from The Mint, Birmingham, Ltd., and in its earlier years the operations of the Mint in Canada were confined to the production of gold, silver and bronze coins for domestic circulation, of British sovereigns, and of small coinages struck under contract for Newfoundland and Jamaica. Previous to 1914 small quantities of gold bullion were refined, but during the War the Mint came to the assistance of the British Government by establishing a refinery in which nearly twenty million ounces of South African gold were treated on account of the Bank of England, and the subsequent great development of the gold-mining industry in Canada has resulted in gold-refining becoming one of the principal activities of the Mint. Gold coins have never been a popular medium of exchange in Canada and have not been struck since 1919, most of the fine gold produced from the rough shipments from the mines being delivered to the Department of Finance in the form of bars worth approximately $8,300 each, the rest being sold in a convenient form to manufacturers. The fine silver extracted from the rough gold, when not required for coinage, is sold in New York or disposed of to local manufacturing firms.

The domestic currency of Canada, as at present authorized by the Currency Act, consists of: $20, $10, $5 and $2½ gold pieces, 900 millesimal fineness (only $10 and $5 pieces have been issued); of $1, 50-cent, 25-cent and 10-cent silver pieces, 800 millesimal fineness; of 5-cent pieces of pure nickel (from metal produced in Canada); and of 1-cent pieces in bronze. The silver 5-cent piece is still legal tender but its coinage was discontinued in 1921; the silver dollar was never coined until 1935, when, by Royal Proclamation of Apr. 12, the design of the new Jubilee Silver Dollar was set out. The proclamation went into operation on May 1, 1935.

Gold.—Gold is used only to an insignificant extent as a circulating medium in Canada, its monetary use being practically confined to reserves, but $5 and $10 gold pieces weighing respectively 129 and 258 grains, 9-10ths pure gold by weight, have been coined, the Canadian gold dollar thus containing 23·22 grains of pure gold. These coins were first issued in 1912, authority to issue them having been conferred in 1910. By the Currency Act, 1910 (9-10 Edw. VII, c. 14), British sovereigns, which are legal tender for $4.86⅔, and other gold coins, and the $5, $10 and $20 gold coins of the United States, which contain exactly the same weight of gold as Canadian gold coins of these denominations, are also legal tender. These, however, were almost entirely divided between the Dominion Government and the banks as reserves, and the chief circulating medium of the country is provided by paper and token currency. On the establishment of the Bank of Canada, the chartered banks transferred their holdings of gold in Canada to this institution.

Table **1**, compiled by the Master of the Royal Canadian Mint, shows the value of the gold bullion received for treatment at the Ottawa Mint since its foundation, together with the gold coin and bullion issued. A statement of the gold, silver, nickel and bronze coinages issued to the separate provinces and to the Dominion of Canada since 1858 is published as Table **2.** Table **3,** compiled by the Dominion Comptroller of Currency, gives the form in which the gold has been held by the Government in recent years.

1.—Value of Gold Bullion Received for Treatment and Value of Gold Coin and Bullion Issued from the Ottawa Mint, 1908-16 and, by years, 1917-34.

NOTE.—Gold valued at the standard price of $20·671834 per fine oz.

Token Currency.—Canadian silver dollars weighing 360 grains, 37-40ths fine, provided for by the Currency Act of 1910, were placed in circulation for the first time in 1935 (see p. 949). Fifty-, 25-, 10-, and 5-cent pieces of weight proportionate to their respective fractions of the dollar, and of the same fineness, are in circulation, but, by c. 9 of the Statutes of 1920, the standard of fineness was reduced to 8-10ths. In 1921 the coinage of a nickel 5-cent piece weighing 70 grains was authorized. Silver coins are legal tender only up to ten dollars, nickel coins to five dollars, and bronze coins to twenty-five cents. Table **4** shows the *net* issue of silver and bronze coins (that is, the value issued less the value withdrawn), by years from 1901.

Dominion Notes.—Prior to the taking over of the note issue by the Bank of Canada when it opened on Mar. 11, 1935, Dominion notes were issued under any one of three statutory authorities: (1) the Dominion Notes Act (Statutes of 1934, c. 34), which required a gold reserve of 25 p.c. to be held against the first $120,000,000 of notes issued and full gold coverage against any issue in excess of $120,000,000; (2) the Finance Act (R.S.C. 1927, c. 70), Part II of which authorized the Minister of Finance to advance to any chartered bank or to the savings banks of Quebec, Dominion notes to any amount on the pledge of approved securities deposited with the Minister. These advances bore interest and no gold coverage was required to be held on Dominion notes so advanced; (3) Chap. 4 of the Statutes of 1915, authorizing the Government to issue Dominion notes to the amount of $26,000,000 without gold coverage, but partly covered by the deposit of $16,000,000 of railway securities guaranteed by the Dominion Government.*

* The following is an outline of Canadian legislation respecting the issue of notes. After Confederation, by an Act of 1868 (31 Vict., c. 46), authority was given for the issue of notes to the extent of eight million dollars. The reserve was fixed at 20 p.c. up to a circulation of five millions; beyond that, 25 p.c. to be held as reserve. The law of 1870 (33 Vict., c. 10) authorized a limit of nine million dollars. The reserve was fixed at 20 p.c., but the nine millions were only to be issued when the specie amounted to two millions. Dollar for dollar was to be held beyond nine millions. In 1872 (35 Vict., c. 7) the reserve for the excess over nine millions was fixed at 35 p.c. in specie. This was amended in 1875 (38 Vict., c. 5) by requiring dollar for dollar beyond twelve millions; for the reserve between nine and twelve millions 50 p.c. in specie was to be held. In 1876 the law respecting Dominion notes was extended to the provinces of Prince Edward Island, British Columbia and Manitoba. In 1880 (43 Vict., c. 13) the basis of the present standard was established. A reserve of 25 p.c. in gold and guaranteed debentures was required, of which 15 p.c. at least was to be in gold. The limit was raised to twenty million dollars. In 1894 (57-58 Vict., c. 21) the limit was raised to twenty-five millions, but this was found unworkable and was repealed in 1895 (58-59 Vict., c. 16), and authority was given to issue notes to any amount over twenty millions, on holding dollar for dollar beyond that sum. In 1903 (3 Edw. VII, c. 43) the Minister of Finance was required to hold gold and guaranteed debentures of not less than 25 p.c. on Dominion notes issued and outstanding up to thirty million dollars; beyond thirty millions he was required to hold gold equal to the excess. The Dominion Notes Act of 1914 (5 Geo. V, c. 4), passed in the short war session of August, 1914, provided that a gold reserve of not less than 25 p.c. should be held against issues of Dominion notes up to $50,000,000 and dollar for dollar against the excess. In 1934, it was provided that a gold reserve of 25 p.c. be held against issues of Dominion notes up to $120,000,000 and dollar for dollar against the excess. In the session of 1914, the Government was given power, by 5 Geo. V, c. 3, "in case of war, invasion, riot or insurrection, real or apprehended, and in case of any real or apprehended financial crisis", by proclamation to authorize the issue of Dominion notes to the chartered banks upon their pledge of approved securities deposited with the Minister of Finance. This was made a regular and permanent feature of the system by c. 48 of the Statutes of 1923, consolidated as c. 70, R.S.C., 1927, as stated above.

Dominion notes are of two types, those in general circulation and those used only in inter-bank transactions, the latter being described as "special" notes. Notes in general circulation are of the denominations 25 cents, $1, $2, $4, $5, $50, $500, $1,000, but for a considerable time no notes of $4 and $50 denominations have been issued. "Special" notes are mainly of $5,000 and $50,000 denominations, $1,000 "specials" being no longer issued. The amounts of each denomination of both types of notes in circulation are given, as at Mar. 31 of each recent year, in Table 7, while Tables 5 and 6 are concerned with gold reserves.

5.—Dominion Notes Outstanding and Reserves as at June 30, 1900-34.

NOTE.—Corresponding figures for 1890-99 inclusive are given at p. 886 of the 1933 Year Book.

[1] Includes Dominion notes in the Central Gold Reserves as security for bank note circulation.

[2] Includes provincial notes amounting to $32,857 in 1890, reduced to $27,589 on June 30, 1933, and to $27,585 on June 30, 1934.

[3] Includes issue of $50,000 notes, 1919-34.

[4] Per capita circulation in 1900 is taken as 100.

[5] The circulation uncovered by specie reserve was to a considerable extent covered, between 1890 and 1910, by the holdings of guaranteed debentures amounting to $1,946,666. Since 1914 a part of the issue of Dominion notes outstanding has been covered by the holding of securities approved under the Finance Act, 1914, and the Finance Act (R.S.C., 1927, c. 70).

[1]Revised since the publication of the 1933 Year Book.

Bank Notes.—Bank notes form the chief circulating medium used in Canada. Under the Bank Act, the banks are authorized to issue notes of the denominations of $5 and multiples thereof to the amount of their paid-up capital. These notes are not in normal times legal tender. See pp. 962-963 for 1934 revision of Bank Act, outlining gradual reduction in note issue of chartered banks.

In addition, during the period of the movement of the crops (Sept. 1 to Feb. 28-29), the banks were permitted to issue "excess" circulation to the amount of 15 p.c. of their combined capital and "rest" or reserve funds. In the event of war or panic the Government might permit the "excess" to run all the year. The banks paid interest on this excess at 5 p.c. If a bank desired to extend its circulation, it might also do so by depositing dollar for dollar in gold or Dominion notes in the Central Gold Reserves. These issues of bank notes are no longer allowed since the establishment of the Bank of Canada.

In case of insolvency the notes of a bank are a first lien upon its assets. Notes are further secured, in case of insolvency, by the Bank Note Circulation Redemption Fund, to which all banks contribute 5 p.c. of their average circulation not covered

by gold or Dominion notes deposited in the Central Gold Reserves established in 1913. The sum thus secured is available for the redemption of the notes of failed banks.

The figures of bank note circulation are given in Table 8. Table 9 brings together the statistics of the amount of circulating media in the hands of the general public, yearly averages being used where possible. "In the hands of the general public" here includes coin and small Dominion notes in the tills of the banks used for making change as well as that in the hands of the general public, but does not include Dominion notes of denominations larger than five dollars which were used until recently for inter-bank transactions and reserves.* In both Tables 8 and 9 "bank notes in circulation" includes notes of other banks held by the banks, averaging about $10,400,000 in 1934. As for the silver, nickel and bronze coinage in Table 9, the figures are the total amounts issued by the Mint since 1858 less amounts withdrawn from circulation and therefore include amounts held by the banks as well as coins lost by the public, which over such a period would probably amount to a considerable sum.

* As a result of the organization of the Bank of Canada in March, 1935, All Dominion notes are being withdrawn from circulation and are being replaced by Bank of Canada notes, the denominations of which range over $5. See p. 964.

8.—Statistics of Bank Note Circulation, calendar years 1900-34.

NOTE.—The statistics in this table are averages computed from the twelve monthly returns in each year. Figures for 1892-99 will be found at p. 861 of the 1927-28 Year Book.

Section 2.—Banking in Canada.

Historical.—In the early days of banking, one of the chief functions of banks was to issue promissory notes payable to the bearer on demand; where the banks' credit was good these notes passed freely from hand to hand, and were the chief circulating medium in the Canadas. In some cases in the Maritime Provinces bank notes were preferred to those issued by the Provincial Governments.

The need of a uniform circulating medium in Canada was felt by the merchants of Montreal toward the end of the eighteenth century, and the prospectus of a proposed bank of issue to be known as the Canada Banking Company was issued in 1792. This scheme, however, depended chiefly on the co-operation of

British capital and was frustrated by the outbreak of war with France. A second project in 1808 for the incorporation of a Bank of Canada failed to secure the assent of the Legislature of Lower Canada.

At the close of the War of 1812 the army bill currency was withdrawn, and public attention once more turned to the expediency of securing a currency through the establishment of banks. The Bank of Montreal began business toward the end of 1817 as a private institution, under articles of association based on the first charter of the Bank of the United States. In the following year, under similar articles of association, the Quebec Bank was established, as well as the Bank of Canada at Montreal and the Bank of Upper Canada at Kingston. The three Lower Canadian institutions obtained their provincial charters in 1822, while the Bank of Upper Canada was superseded by a second Bank of Upper Canada established at York (Toronto) as a chartered bank in 1821. Meanwhile the Bank of New Brunswick had been incorporated in 1820, while in Nova Scotia the Halifax Banking Co. (private) commenced business in 1825, and the Bank of Nova Scotia received a regular charter in 1832. With all of these earlier banks note issue was an important part of their business.

The Bank of British North America, previously incorporated in the United Kingdom, commenced business in Canada in 1836, while Molson's Bank was established in 1853, the Bank of Toronto in 1855, the Banque Nationale in 1860 and the Banque Jacques-Cartier (later the Banque Provincial du Canada) in 1862. The Union Bank was established in 1866, the Canadian Bank of Commerce in 1867. There were no fewer than 28 banks in existence at Confederation. These were as follows:—

Ontario and Quebec.

Bank of Montreal.
Quebec Bank.
Commercial Bank of Canada.
City Bank.
Gore Bank.
Bank of British North America.
Banque du Peuple.
Niagara District Bank.
Molson's Bank.
Bank of Toronto.
Ontario Bank.
Eastern Townships Bank.
Banque Nationale.
Banque Jacques-Cartier.
Merchants' Bank of Canada.
Royal Canadian Bank.
Union Bank of Lower Canada.
Mechanics' Bank.
Canadian Bank of Commerce.

Nova Scotia.

Bank of Yarmouth.
Merchants' Bank of Halifax.
People's Bank of Halifax.
Union Bank of Halifax.
Bank of Nova Scotia.

New Brunswick.

Bank of New Brunswick.
Commercial Bank of New Brunswick.
St. Stephen's Bank.
People's Bank of New Brunswick.

Subsection 1.—The Canadian Banking System in General.*

A brief résumé of the Canadian banking system must emphasize: (1) its growth, from the beginning closely related to the Montreal produce and export trade and to the commerce of Halifax and Saint John; (2) its development of the branch bank system in order to meet the demands of a rapidly moving frontier of settlement; (3) its adaptation to the requirements of the grain and cattle trade of the west; and (4) the consolidation during later years of the features which tended towards its early success. The development of a stable system has been accompanied by failures,† particularly marked about the middle of the 19th century, but progress has nevertheless been steady, based on sound principles, and adapted as closely as could be to the particular needs of the country.

*For details regarding Canadian bank note issue, see pp. 954-955. †See Table 23, pp. 984-985.

The branch bank is perhaps the most distinctive feature of the Canadian system as it exists to-day, and for a country such as Canada, vast in area and with a small population, the plan has proved a good one. A result of the growth of branch banks has been the partially centralized system that now obtains—centralized as to banks, of which there are now 10, rather than as to districts as in the partially centralized system of the United States.

A second peculiarity of the system is the existence and operation of the Canadian Bankers' Association. Through this body, which was incorporated in 1900 and acts under the authority of the Dominion Treasury Board, co-operation of individual banks is facilitated and encouraged. The association supervises clearing-house transactions, and oversees the printing and issue of notes to its members. Adherence to similar principles and a linking together of the credit of the system result from the co-operation secured through the association.

The elimination of weaker banks or their amalgamation with more stable institutions has been a progressive move towards greater efficiency. Co-operation between the banks and the Dominion Government has been made permanent through the medium of periodic returns and the regulation of note issues and reserves.

Apart from the many detailed services rendered to its clients, the Canadian banking system may be said to perform three main functions as follows:—

1. To put into circulation the paper currency which forms the circulating medium for small exchanges.

2. To provide a mechanism of exchange by the issue of bills of exchange, etc.

3. To form a means by which the credit of the banks and their unused deposits may be put to immediate productive use.

Legislation Regarding Chartered Banks.*—The history of Canadian banking legislation began over a century ago with the granting, between 1817 and 1822, of the Royal Assent to charters incorporating the Bank of New Brunswick, the Bank of Upper Canada, the Bank of Montreal, the Quebec Bank and the then Bank of Canada. The right to issue bank notes was exercised by private banks without legislative sanction for a considerable period after the early charters were granted, and before banks became the subject of general legislation. In Lower Canada the practical monoply of issue was conferred upon the chartered banks by an Act of 1830, whereby the total amount of notes of less than £1 ($4)† in circulation might not at any time exceed one-fifth of the paid-up capital, and no notes under 5 shillings ($1) might be issued, it being further provided that all issues of less than £1 might be limited or suppressed by the Legislature.

In 1841, in the first session of the Canadian Legislature after the Union, a tax of 1 p.c. was imposed upon bank note circulation, which was limited to the amount of paid-up capital, notes of less than £1 not to exceed one-fifth of such capital. Various charters granted or renewed after the Union included provisions prohibiting banks from holding shares of their own stock or granting advances there-against. They were also prohibited from lending on the security of lands, houses, ships or pledge of merchandise (though such could be taken as additional security for debts previously contracted) or holding lands or houses except for the transaction of their business, neither could they own ships nor be engaged in trade except as dealers in bullion or bills of exchange, the object being to confine trans-

* Revised from information furnished by the Office of the Inspector-General of Banks, Department of Finance.

† In the "Old Currency" £1 was equivalent to $4 and 1 shilling to 20c.

actions to legitimate banking business. Statements of assets and liabilities were to be submitted periodically—half-yearly or yearly—and such further information as the Government might call for was to be supplied confidentially. A further and important enactment was the imposition of the double liability upon shareholders, which had not previously existed with respect to the banks of Lower Canada, although it had been for several years a requirement of the younger banks of Upper Canada and first appeared in British North America in the Act incorporating the Bank of Nova Scotia, enacted in 1832. Suspension of specie payments on demand for a period of 60 days, either consecutively or at intervals during one year, was to cause forfeiture of charter. Total liabilities were not to exceed thrice "the aggregate amount of capital stock paid in, and the deposit made in the bank in specie and Government securities for money", but this provision proved of doubtful utility.

In 1850 what was known as the "Free Banking Act" prohibited any but the chartered banks or other corporations or persons authorized under the new Act from issuing notes. A period of one year was allowed for banks or companies, whose right of issue was thus withdrawn, to retire their notes outstanding. It was provided that individuals or partners might establish banks, or joint stock companies with a minimum capital of £25,000 ($100,000) might be formed to carry on the business, but in such cases operations were to be confined to an office in only one place and total liabilities were not to exceed thrice the amount of paid-up capital. In order to issue notes the banks thus formed were obliged to deposit with the Receiver-General provincial or provincially guaranteed securities for not less than £25,000 ($100,000) par value, receiving therefor registered notes. The chartered banks already existing could surrender their right of circulation against assets and secure from the Receiver-General registered notes in return for the deposit of securities, which special issue was not subject to the 1-p.c. tax imposed by the Act of 1841. The legislation included provisions giving effect for the first time to the principle of making bank notes a preferred claim, it being stipulated with respect to any one-office banks established under the Act that, if securities against outstanding notes did not realize sufficient, the general assets of a bank, if wound up, were first to be applied towards the payment of its notes.

Legislation of 1851 increased the period allowed for the retirement of note issues not in conformity with previous legislation from one to five years, provided at least one-fourth of the average circulation during the year 1850—and not secured by the pledge of bonds—was retired annually. Provision was made for partial remission and entire exemption within a specified period from the tax on bank note circulation, subject to certain restriction of such circulation. At the same time permission was granted to issue in excess of the restricted formula against gold or silver coin or bullion, or debentures of any kind issued by the Receiver-General, without requiring the banks actually to deposit such debentures and secure registered notes. The debentures, however, were to be applicable exclusively to the redemption of notes in case of failure. Monthly rather than half-yearly returns now became necessary. In 1853, to encourage the issue of "secured" notes, the issue was permitted in excess of paid-up capital to the extent of specie holdings or debentures receivable, although actual deposit of securities with the Receiver-General was not required. The tax of 1 p.c. was to be calculated only on the average circulation outstanding in excess of such specie and security holdings. Until 1858 banks charging or receiving interest at a rate higher than 6 p.c. were liable to onerous penalties. In that year it was enacted generally that any rate of interest might be

exacted, but banks were prohibited from taking or stipulating for a higher rate than 7 p.c. In 1859, at the urgent request of the banks, a measure was passed authorizing them to make advances on the security of bills of lading and warehouse receipts covering certain commodities.

By 1861-62 free banking had practically run its course. In all, six banks had taken advantage of the legislation, one of which—the Bank of British North America —doubtless found it valuable. The others did not thrive. The Act was finally repealed by the Provincial Notes Act of 1866, which aimed at a gradual reduction in the volume of bank note circulation.

By Section 91 of the British North America Act, the right to legislate respecting banking, the incorporation of banks and the issue of paper money was assigned exclusively to the Dominion Parliament. A temporary measure was passed in 1867, largely by way of re-enactment until 1870 of previous legislation, but extending the powers of banks formerly incorporated by any of the provinces to the territory of the whole Dominion, and subjecting banks in New Brunswick and Nova Scotia to a tax of 1 p.c. upon the excess of their average notes in circulation above their average holdings of coin and bullion. (In these provinces there had been no general banking Act, special provisions being embodied in the respective charters which differed in only a few essential respects from those granted in Upper and Lower Canada.) It was re-enacted that banks were entitled to hold and dispose of mortgages on realty as additional security for debts already contracted and to acquire title to mortgaged property if necessary.

The Bank Act of 1870 provided that new banks must have a minimum paid-up capital of $200,000 and that at least 20 p.c. of the subscribed capital must be paid up in each year after the commencement of business. A proposal to limit the liabilities of banks in relation to capital and specie and Government debenture holdings was not translated into legislation. Bank notes in circulation were not to exceed the amount of paid-up capital. The right to issue notes under $4 was withdrawn, largely in consideration of the abolition of the tax of 1 p.c. on note circulation. If possible up to 50 p.c., but in no case less than one-third, of a bank's cash reserves were to be held in Dominion notes. Dividends were limited to 8 p.c. until or unless the bank's reserve fund was the equivalent of 20 p.c. of its paid-up capital. In case of the failure of a bank, double liability of shareholders became enforceable without waiting for the realization of the bank's general assets. Banks were required to transmit certified lists of shareholders annually, to be laid before Parliament. Any existing bank was permitted, on the authority of the shareholders, to apply for an extension of its charter, and the Governor in Council, upon the recommendation of the Minister of Justice and the Treasury Board, was empowered to extend such charter to 1881. Any suspension by a bank of payment of its liabilities for a period of 90 days would constitute insolvency, and operate as a forfeiture of its charter.

In 1871 the first comprehensive Banking Act of the Dominion was passed. A large part of the statute was devoted to the re-enactment and consolidation of legislation already in force, although the measure of 1870 contained the main features of the Government's policy. The procedure relative to extension of charters laid down in the preceding year was superseded by this Act, which became the charter of the banks until July 1, 1881, that date being set in contemplation of regular decennial revisions. No new bank was permitted to commence business

with less than $500,000 capital *bona fide* subscribed and $100,000 similarly paid up, with the further proviso that at least $200,000 must be paid up within two years after commencement of business. The sections respecting loans against warehouse receipts, etc., were thoroughly revised and difficulties of procedure removed. Banks were permitted to take security on commodities in store pending marketing, and also while undergoing conversion from the raw to the finished state. Advances were allowed upon security of shares of other banks. It was provided that the rate of interest or discount charged by a bank should not exceed 7 p.c. and that no higher rate should be recoverable. Monthly returns of assets and liabilities were required. Certain technical amendments were made to the Bank Act in 1872, 1873 and 1875. In 1879 the power to lend upon the security of shares of other banks was repealed.

At the first general revision of the Bank Act in 1880 (effective 1881), a note holder was definitely recognized as a preferred creditor, claims of the Dominion and Provincial Governments, respectively, ranking next in order of preference. Banks were prohibited from issuing notes under $5, higher denominations to be multiples of this sum. Dominion notes were now to constitute not less than 40 p.c. of the bank's cash reserves. Monthly returns of a more detailed character were to be made. The Act was amended in 1883 to enforce more effectively the prohibitions, restrictions and duties already imposed upon the banks. The use of certain titles by private bankers not operating under the provisions of the Act was prohibited.

At the revision of 1890 (effective 1891), it was stipulated that not less than $250,000 capital must be paid up before a certificate permitting a bank to commence business could be issued by the Treasury Board. A period of one year from the date of the charter was allowed for the payment of the capital and the carrying out of other preliminaries. Dividends were not to exceed 8 p.c. until or unless the reserve fund was the equivalent of 30 p.c. of the paid-up capital. A fund known as the "Bank Note Circulation Redemption Fund" was established, consisting of deposits made by the banks with the Minister of Finance of amounts equal to 5 p.c. of their average note circulation, such deposits to be subject to adjustment annually, and to constitute a guarantee of the payment of all notes of a suspended bank with interest at 6 p.c. from the date of suspension until the date when their redemption was undertaken by the liquidator. Failing action by the liquidator within two months, the Minister of Finance was authorized to redeem the notes out of the fund, and such outlay, if not made good out of the assets of the failed bank, was to be reimbursed by the contributing banks *pro rata* to their contributions. Another major change gave the banks, in certain classes of loans, the same legal power to take security over the borrowers' goods as had previously been granted by warehouse receipts. This enactment served to make general and more clear principles already recognized by previous legislation and practice. Directors' qualifications were set out more clearly and it was now provided that a majority only of directors, instead of all, need be British subjects. Penalties for the excessive issue of circulation were made more severe.

The revision of 1900 (effective 1901) recognized the Canadian Bankers' Association as an agency in the supervision and control of certain activities of the banks. It was charged, under the Treasury Board, with the responsibility of supervising the printing and distribution of notes to the banks and their issue and destruction;

also with control over clearing houses and the appointment of curators to supervise the affairs of suspended banks. The amended Act also included provisions permitting one bank to sell its assets to another. More detailed monthly returns were required and the interest on notes of failed banks was reduced from 6 p.c. to 5 p.c. In 1908, after the financial crisis of 1907, provision was made for emergency circulation during the crop moving season from October to January, when banks were allowed to issue excess circulation up to 15 p.c. of their combined paid-up capital and rest or reserve funds, this emergency circulation to be taxed at a rate not exceeding 5 p.c. per annum. In 1912, the period was extended to the six months from September to February inclusive.

At the fourth revision of the Bank Act in 1913 provision was made for an audit of each bank's affairs by auditors appointed by the shareholders. There was also provision for the establishment of Central Gold Reserves in which banks might deposit gold or Dominion notes for the purpose of issuing additional notes of their own there-against. Annual reports to the Minister of the fair market value of real and immovable property held by the banks for their own use were required. Banks were empowered to lend to farmers upon security of their threshed grain. As a war measure the provision for emergency circulation was extended in 1914 to cover the whole year and banks were further authorized to make payments in their own notes instead of in gold or Dominion notes.

The fifth revision of 1923 (13-14 Geo. V, c. 32) resulted in numerous important changes. The qualifications of provisional directors were re-defined, while provision was made for keeping records of attendance at directors' meetings and bringing them to the notice of shareholders. Annual and monthly statements were given further attention and more complete returns required, including statements of controlled companies in the names of which any part of a bank's operations were carried on. Other or special returns were to be made if called for by the Minister. Two auditors were now to be appointed by the shareholders instead of one, and the qualifications, duties and responsibilities of auditors were more clearly defined. The personal liability of directors in case of distribution of profits in excess of legal limits was also more definitely expressed. Regulations regarding loans were amended and advances to any officer or clerk of a bank could not, in any circumstances, exceed $10,000. Registration of security for loans under Sec. 88 was provided for. It became necessary for guarantee and pension funds to be invested in trustee securities. The punishment of directors and other bank officials for making false statements of a bank's position was provided for in Sec. 153. In 1924, as a result of the failure of the Home Bank of Canada, provision was made for periodical examination of the chartered banks by an Inspector-General of Banks, who was to be an officer of the Department of Finance.

The sixth revision of the Bank Act was postponed from 1933 to 1934 (c. 24), for adaptation to the establishment of the new Bank of Canada, and most of the alterations were to provide for the relations of the chartered banks with the Bank of Canada when the latter should be organized and authorized to commence business. The chartered banks were then to carry a reserve (consisting of a deposit with or notes of the Bank of Canada) amounting to at least 5 p.c. of their deposit liabilities in Canada, and in addition to maintain adequate reserves for external liabilities. The notes of the chartered banks were to be gradually replaced by those of the Bank of Canada as the circulating medium in Canada. To this end notes in circu-

lation of chartered banks were not to exceed their unimpaired paid-up capital from the time the Bank of Canada commenced business and were to be reduced by 5 p.c. per annum for five years from Jan. 1, 1936, and 10 p.c. per annum for five years from Jan. 1, 1941, so that at the end of ten years they should not exceed 25 p.c. of the paid-up capital. At the same time, the liability of shareholders under the double liability provision was limited to that proportion of the par value per share which the authorized note issue at the time bore to the paid-up capital of the bank. Other important changes in general provisions included: (1) the curator of a suspended bank was to be appointed or removed by the Minister of Finance, instead of by the Canadian Bankers' Association; and (2) the terms "bank", "banker" or "banking" could not be applied to any activities in Canada except those of chartered banks or approved savings banks; (3) a limitation of 5 p.c. of the paid-up capital (instead of 10 p.c. as formerly) was placed on loans to directors, or any firm, company or corporation in which the President, the General Manager or a director is a partner or shareholder, without the approval of two-thirds of the directors present at a regular or special meeting called for the purpose; (4) a director was prohibited from being present or voting at a meeting of the Board when loans to himself or any firm, company or corporation of which he is a partner or director, are under consideration, an infraction of this prohibition being attended by severe penalties as well as automatic disqualification of such director; (5) a bank was not permitted to allow its name to appear, except as banker for receiving applications, upon any prospectus or advertisement respecting the issue of securities apart from government or municipal issues and certain others of the specific type mentioned in the Act; (6) changes were made to permit of loans under Section 88 against seed grain, binder twine and fertilizer; (7) a definite prohibition was enacted against the charge of a higher rate of interest or discount than 7 p.c. in any part of Canada except the Territories, any violation of such prohibition being attended by penalties against both the bank and the officer responsible; (8) monthly returns were amplified for the purpose of securing a clearer appreciation of the position of the banks, and certain additional returns called for.

The Bank of Canada.—Chapter 43 of the Statutes of 1934, "An Act to incorporate the Bank of Canada", provided for the establishment of a central bank in Canada. The capital of the Bank is $5,000,000, divided into shares of $50 par value. These shares were offered for public subscription by the Minister of Finance on Sept. 17, 1934, and were largely oversubscribed. The maximum allotment to any one individual or corporation was 15 shares.

Shares of the Bank may be held only by British subjects ordinarily resident in Canada, or by corporations controlled by British subjects ordinarily resident in Canada. The maximum holding permitted one person is 50 shares. Directors, officers or employees of the chartered banks may not hold shares of the Bank.

The Bank is authorized to pay cumulative dividends of 4½ p.c. per annum from its profits after making such provision as the board thinks proper for bad and doubtful debts, depreciation in assets, pension funds and all such matters as are

properly provided for by banks. The remaining surplus will be paid into the Consolidated Revenue Fund of Canada, and to the rest fund of the Bank, in specified proportions.

The Bank may buy and sell securities of the Dominion, the provinces, the United Kingdom and the United States of America, without restriction if of a maturity not exceeding two years, and in limited amounts if of longer maturity. It may also buy and sell securities of British Dominions and France without restriction, if maturing within six months. Short-term securities of the Dominion or provinces may be rediscounted. The Bank may buy and sell certain classes of commercial paper of limited currency, and if endorsed by a chartered bank may rediscount such commercial paper. Advances for six-month periods may be made to chartered banks, Quebec savings banks, the Dominion or any province against certain classes of collateral, and advances of specified duration may be made to the Dominion or any province in amounts not exceeding a fixed proportion of such government's revenue. The Bank may buy and sell gold, silver, nickel and bronze coin and gold and silver bullion, and may deal in foreign exchange.

The Bank has assumed the liability for Dominion notes outstanding and is replacing them with its own notes in denominations of $1, $2, $5, $10, $20, $50, $100, $500, and $1,000. The chartered banks are required (under the Bank Act of 1934) to reduce the issue of their own bank notes to 25 p.c. of their paid-up capital during the next 10 years.

The Bank of Canada must maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada. The reserve,* in addition to gold, may include silver bullion, balances with the Bank of England, the Bank for International Settlements, the Federal Reserve Bank of New York and central banks in gold standard countries, Treasury bills of the United States of America or the United Kingdom having a maturity not exceeding 3 months, and bills of exchange having a maturity not exceeding 90 days, payable in London, New York, or in a gold standard country, less any liabilities of the Bank payable in the currency of the United Kingdom, the United States of America, or a gold standard country.

The bank has an obligation to sell gold in the form of bars on demand, but this may be, and is at present, suspended by Order in Council.

The chartered banks are required to maintain a reserve of not less than 5 p.c. of their deposit liabilities within Canada in the form of deposits with and notes of the Bank.

The Bank will act as the fiscal agent of the Dominion of Canada and may by agreement act as banker or fiscal agent of any province. The Bank must not accept deposits from individuals and thus cannot compete with the chartered banks in commercial banking fields.

*In the weekly statement on pp. 965-966, the net reserve is described as Item 1 of Assets less Item 5 of Liabilities (*i.e.*, sundry liabilities payable in sterling, U.S.A. other foreign gold currencies).

The head office of the Bank is at Ottawa, and it has an agency in each province, namely, at Montreal, Toronto, Winnipeg, Regina, Calgary, Vancouver, Saint John, Halifax and Charlottetown.

The Governor of the Bank is its chief executive officer, and he is assisted by a Deputy Governor and an Assistant Deputy Governor. The first Governors were appointed by the Government and are as follows: Governor, G. F. Towers; Deputy Governor, J. A. C. Osborne; and Assistant Deputy Governor, L. P. St-Amour. Subsequent appointments are to be made by the Board of Directors of the Bank subject to the approval of the Governor in Council.

At the first meeting of the shareholders on Jan. 23, 1935, seven directors were elected for terms to run as follows: one until the 3rd annual general meeting, two until the 4th, two until the 5th, and two until the 6th annual general meeting. In future the directors will be elected by the shareholders for terms of 5 years. Directors must hold at least 10 shares of capital stock of the Bank, must be British subjects ordinarily resident in Canada, must not receive remuneration out of public funds in any capacity, and must have no connection with a chartered bank.

There is also an Executive Committee of the Board of Directors consisting of the Governor, Deputy Governor, and one member of the board, which must meet once a week. This committee has the same powers as the board, but every decision is submitted to the Board of Directors at its next meeting. The board must meet at least four times a year. The Deputy Minister of Finance is an *ex officio* member of the Board of Directors and of the Executive Committee, but is without a vote.

The Bank commenced business on Mar. 11, 1935. A statement is required of the assets and liabilities of the Bank as at the close of business on each Wednesday. The statement of the Bank as at Wednesday, April 17, 1935, follows:—

BANK OF CANADA.

Statement of Assets and Liabilities as at Wednesday, April 17th, 1935.

LIABILITIES.	$	$

Ratio of Net Reserve (Item 1 of Assets less Item 5 of Liabilities) to Notes and Deposits Liabilities: 45·61 per centum.

Banking Statistics.—In Table **10** is given an historical summary of Canadian banking business since Confederation. In order to afford a clear view of the nature of banking transactions in Canada, bank liabilities have been classified in two main groups, liabilities to shareholders and liabilities to the public, only the latter group being ordinarily considered when determining the financial position of any such institution. Assets are divided into four groups, other assets being included in the total. As of interest to students of banking practice, the relative rates of increase of capital and reserve funds may be noted on the accompanying graphs, also the great increase in the proportion of liabilities to the public to total liabilities, and the gradually increasing percentage of liabilities to the public to total assets. The declining proportion of notes in circulation to total liabilities to the public is also characteristic of the evolution of banking in recent times. Holdings of Dominion and Provincial Government and municipal securities were relatively insignificant prior to the Great War.

Deposits, Loans and Discounts.—As an index of the course of banking business, of the nature of many transactions undertaken and of the general security of bank assets, loans and discounts are of great value. They illustrate clearly the channels into which a large proportion of the potential earning power of the banks is directed, and, by providing a comparison between investments made in lending operations inside and outside of Canada, afford essential information regarding the conduct by a bank of one of its most important activities.

Bank deposits (the demand deposits being to a large extent the product of lending operations, by which credit is advanced on security followed by the deposit of the proceeds of a loan) are also of considerable importance, and, on account of their derivation, are one of the most valuable records of the volume of business done at any time.

Tables **13** and **14**, following, give the deposits and loans of Canadian chartered banks for the years 1930 to 1934.

13.—Deposits in Chartered Banks in Canada and Elsewhere, for the calendar years 1930-34.

NOTE.—The statistics in this table are averages computed from the twelve monthly returns in each year.

Item.	1930.	1931.	1932.	1933.	1934.
	$	$	$	$	$
Deposits by the public in Canada—					
Payable on demand	622,895,347	578,604,394	486,270,764	488,527,864	513,973,506
Payable after notice or on a fixed day	1,427,569,716	1,437,976,749	1,376,325,128	1,378,497,944	1,372,817,869
Deposits elsewhere than in Canada	390,403,559	332,902,489	312,293,297	307,820,359	321,984,001
Balances due to Dominion and Provincial Governments	75,742,965	73,351,113	81,750,341	61,995,372	65,832,560
Totals, Deposits	**2,516,611,587**	**2,422,834,828**	**2,256,639,530**	**2,236,841,539**	**2,274,607,936**

As a result of an amendment to the Bank Act in 1934 deposits and loans are required to be classified according to size of the deposit, or purpose of the loan, each year. The following is the classification of deposits payable on demand in Canada and payable after notice in Canada as at Oct. 31, 1934:—

CLASSIFICATION OF DEPOSITS.

	Number.	Amount.
		$
Deposits Payable on Demand—		
(1) Deposits of $1,000 or less	580,929	71,760,883
(2) Deposits over $1,000 to $5,000	35,259	72,266,442
(3) Deposits over $5,000 to $25,000	8,633	88,673,885
(4) Deposits over $25,000 to $100,000	1,877	87,501,586
(5) Deposits in excess of $100,000	599	218,350,690
(6) Adjustment representing drafts issued, certified cheques, items in transit, etc	-	3,890,269
Totals	627,297	542,443,755
Deposits Payable After Notice—		
(1) Deposits of $1,000 or less	3,765,971	416,528,692
(2) Deposits over $1,000 to $5,000	246,057	485,695,559
(3) Deposits over $5,000 to $25,000	28,896	249,589,678
(4) Deposits over $25,000 to $100,000	1,853	82,550,359
(5) Deposits in excess of $100,000	390	131,626,199
(6) Adjustment representing certified cheques, interest accrued on interest-bearing accounts, items in transit, etc	-	4,188,088
Totals	4,043,167	1,370,178,575

14.—Loans of Chartered Banks in Canada and Elsewhere, for the calendar years 1930-34.

NOTE.—The statistics in this table are averages computed from the twelve monthly returns in each year.

Item.	1930.	1931.	1932.	1933.	1934.

[1]Includes loans to cities, towns, municipalities and school districts.

The following classification of bank loans in Canada as at Oct. 31, 1934, has been made as a result of an amendment to the Bank Act in 1934:—

CLASSIFICATION OF LOANS.	$	$
1. Provincial Governments		26,822,179
2. Municipal governments and school districts		107,414,483
3. Agriculture—		
(a) Farmers' loans, cattle loans, fruit growers	64,229,744	
(b) Loans to grain dealers, grain exporters and seed merchants	150,515,305	
		214,745,049
4. Financial—		
(a) Call loans and other accommodation to brokers and bond dealers	90,748,241	
(b) Loans to trust, loan, mortgage, investment and insurance companies and other financial institutions	69,956,745	
(c) Loans to individuals against approved stocks and bonds not otherwise classified	115,192,444	
		275,897,431
5. Merchandising, wholesale and retail		117,468,420
6. Manufacturers of and dealers in lumber, pulpwood, and products thereof		74,283,150
7. Other manufacturing of all descriptions		140,125,188
8. Mining		6,621,121
9. Fishing, including loans to packers and curers of fish		6,965,205
10. Public utilities, including transportation companies		71,358,370
11. Loans to building contractors and others for building purposes		21,792,645
12. Loans to churches, parishes, hospitals, charitable and religious institutions		19,683,072
13. Other loans		66,532,517
Total		$1,149,708,830

Bank Reserves.—An important change has been made in the regulations governing bank reserves since the Bank of Canada commenced operations. The chartered banks are now required to carry deposits with or notes of the Bank of Canada together constituting a reserve amounting to 5 p.c. of their deposit liabilities in Canada in addition to maintaining adequate reserves against their external liabilities. Formerly, however, it was required that 40 p.c. of whatever cash reserves a bank found it expedient to carry should be in Dominion notes. A second provision instructed the Minister of Finance to arrange for the delivery of Dominion notes to any bank in exchange for specie. Thus the gold reserve against Dominion notes, to the extent that the notes were held by the banks, was reserve against banking operations, the Dominion Government being the custodian of the gold for the banks. The other cash element in bank reserves is specie in hand. In addition to this cash on hand, Canadian banks carry three other kinds of assets which are regarded as reserves, being funds more or less immediately available for the liquidation of liabilities. These are: (1) cash balances in banks outside of Canada; (2) call and short loans in New York (the favorite call loan market); and (3) readily marketable securities. These are shown, together with net liabilities, in Table **15.** In Table **16,** the ratio to net liabilities of each element of the reserves is shown.

15.—Bank Reserves in Detail and Total

NOTE.—The statistics in this table are averages computed from the twelve monthly

[2]Net liabilities are obtained by deducting from total liabilities to the public, as shown in Table **10**, the items "Notes of other banks", "Cheques on other banks", and "Loans to other banks in Canada, secured, including bills rediscounted", which represent indebtedness within the system and are counterbalanced by credits within the system.

16.—Ratios of Bank Reserves to Net Liabilities,[1] calendar years 1901-34.

NOTE.—The statistics in this table are based upon the averages given in the preceding table of the twelve monthly returns in each year. Figures for 1892-1900 will be found at p. 874 of the 1927-28 Year Book.

See Table **15** for actual amounts of reserves and net liabilities.

Subsection 2.—The Individual Chartered Banks of Canada.*

During the period from 1881 to 1901, the number of chartered banks doing business in Canada under the Bank Act remained almost the same, 36 in 1881 and 1891, and 34 in 1901, but during the present century there has been in banking, as in industry, an era of amalgamations, the number of banks having dropped to 25 in 1913 and to 10 in 1931. That this has been far from involving a curtailment of banking facilities is seen in Table **10**, which shows the development of the banking business since 1867, and in Table **17**, which compares the number of branch banks existing in Canada at different periods, and shows a growth from 123 at Confederation to 4,083 inclusive of sub-agencies at Dec. 31, 1930. Since then, owing to the shrinkage in commercial activities as a result of the depression, some unprofitable branches have been closed and the total has declined to 3,527, exclusive of 150 branches and agencies in other countries, as at Dec. 31, 1934.

* Revised by A. W. Rogers, Secretary, The Canadian Bankers' Association.

Tables 18 and 18A give the numbers of branches of the various banks, by provinces, as at Dec. 31, 1933 and 1934, while Table 19 contains the statistics of branches of Canadian banks doing business outside of Canada, an extension of Canadian banking (more especially to Newfoundland and the West Indies) which proceeded very rapidly in the war and early post-war period, rising to a total of 206 in 1921. Since then this number has gradually declined to 150 branches and sub-agencies in 1934.

17.—Numbers of Branches of Chartered Banks in Canada, by Provinces, Dec. 31, 1868, 1902, 1905, 1920, 1926, 1930-34.

Totals	**152[2]**	**148[2]**

[1]Exclusive of one sub-agency. [2]Exclusive of two sub-agencies.

Earnings of Canadian Banks.—The chartered banks of Canada are for the most part Dominion-wide institutions, doing business in all parts of the country. Their earnings, therefore, reflect with very considerable faithfulness the fluctuations of general business. So far as individual banks are concerned, the changes resulting from amalgamations are apt to render the figures incomparable over a period of years. During the six years covered by Table **20,** however, only one bank, the Imperial Bank of Canada, has absorbed another bank, *viz,* The Weyburn Security Bank.

20.—Net Profits of Canadian Banks and Rates of Dividend Paid, for their business years ended 1929-34.

NOTE.—The profits of the Bank of Nova Scotia and the Bank of Toronto are stated exclusive of amounts paid for Dominion and provincial taxes; these amounts, however, are included for the other banks.

[1]Includes other liabilities.

Bank Amalgamations and Insolvencies.—Two tables follow which may be of interest to students of Canadian banking history. The first, showing bank insolvencies since 1867, gives the capital paid up, reserves, assets and liabilities of insolvent banks, and shows also the payments to noteholders and depositors. In the majority of cases, both these classes of creditors have received payment in full. The table of bank absorptions gives the dates of absorption of the 36 banks which have been incorporated with other institutions since 1867.

23.—Bank Insolvencies

NOTE.—No bank that has failed since 1895 has paid anything to shareholders in respect of their capital investment. There is no reliable information as to earlier dates. Information is not available from which to compute losses with respect to liabilities other than deposits and circulation. In some instances these liabilities would include liabilities to Governments (having preference) and to banks and others. Note-holders have experienced no losses whatever since the inauguration of the Bank Circulation Redemption Fund in 1890 or, in fact, since the failure of the Bank of Prince Edward Island in 1881. The amount of double liability actually collected from shareholders of the banks which latterly became insolvent was as follows:—

	Name of Bank and Place of Chief Office.	Number of Branches when Operations Ceased.	Date of Charter.	Date of Suspension or Cessation of Normal Operations.	Capital Stock at Date of Suspension.		
					Authorized.	Subscribed.	Paid-up.
					$	$	$

[1]The purchasing banks named in the latter part of the table are no longer in business.
[2]Dates given since 1900 are those of the Orders in Council authorizing the absorptions.
[3]The Banque d'Hochelaga after absorbing the Banque Nationale adopted the name Banque Canadienne Nationale.

(*Footnotes to* Table 23 *concluded.*)—

[2]This bank did not suspend payment, but when difficulties were encountered an arrangement was made whereby all liabilities were taken over by the Bank of Montreal which, with certain other banks, assumed responsibility for any loss which might result after realization of assets and double liability of shareholders. Depositors and other creditors accordingly experienced neither loss nor delay. By winding-up order of Sept. 29, 1908, the bank was placed in liquidation and shareholders proceeded against for double liability, in respect of which $1,202,510 was collected but $601,534 of that amount subsequently returned. Winding-up proceedings terminated in January, 1918.

[3]This bank did not suspend payment. By agreement, certain other banks took over its various branches and assumed all of its liabilities; accordingly depositors and other creditors experienced neither loss nor delay. In 1911, when the assisting banks threatened to place the bank in liquidation for the purpose of enforcing payment of double liability of shareholders, a corporation named International Assets Limited was formed, which assumed all liabilities to the assisting banks and took over the assets of the Sovereign Bank, upon which bonds were issued to the assisting banks for the amount owing them. Numerous shareholders of the Sovereign Bank subscribed to preference shares in the corporation and to the extent that they did so were released from their double liability on shares of the Sovereign Bank; as a result, in excess of $2,000,000 was collected and paid over to the assisting banks. On Jan. 27, 1914, after it became apparent that a number of shareholders would not subscribe, or pay their double liability voluntarily, the Sovereign Bank (at a time when International Assets Limited was its sole creditor) was placed in liquidation.

[4]In addition to realization of general assets, the President of this bank advanced sufficient to permit of all liabilities being paid in full without resort to the double liability of the shareholders.

[5]A Royal Commission inquired into the failure of this bank in 1912 and its report, together with the evidence adduced at the inquiry, are matters of public record.

[6]Liquidation not yet completed. A preferred claim of the province of British Columbia for approximately $100,000 has been settled for $65,000 subject to the proviso that the province may rank with ordinary creditors for the balance, if or when the ordinary creditors have received a dividend of 25 p.c. The remaining assets, however, may realize only sufficient to pay a very small dividend, if any.

[7]Interim dividend of 25 p.c. paid by the liquidator in December, 1923, and he anticipates being able to make a further distribution eventually when the remaining assets are realized. The amount will depend entirely upon future developments but, in any event, is unlikely to exceed 10 p.c. The Government of Canada, pursuant to investigation by a Royal Commission into the responsibility for and causes of the failure, granted relief to the extent of 35 p.c. of the claims of certain classes of creditors, namely, all those individuals with claims of less than $500 as well as those with larger claims who were found upon due inquiry to be in special need or straitened circumstances as a result of the failure. This involved a total outlay of approximately $3,460,000.

Subsection 3.—The Volume of Business Transacted through the Banks.

In advanced industrial societies money is only "the small change of commerce". The great bulk of monetary transfers, particularly in the case of the larger transactions, is made through the banks. Thus it has been estimated that in the United States in 1917 about 6 p.c. of the business transactions of the country were financed by the use of money and the remaining 94 p.c. by the use of cheques. Accordingly, if we knew the aggregate amount of the cheques paid through the banks and charged to accounts, we should have an almost complete record of the volume of business transacted, and thus of the business activity of the country.

Statistics of this character were at first secured through the operation of the clearing houses—places where the representatives of all the banks met daily in the leading cities and presented for payment the notes of other banks and the cheques drawn upon other banks that had been paid into their institutions in the regular course of business. In Canada, the first clearing houses to be established were those of Halifax (1887), Montreal (1889), Toronto (1891), Hamilton (1891) and Winnipeg (1893), and the number has subsequently increased to 32. In recent years, owing to the reduction in the number of the banks through amalgamations, the proportion of the inter-bank transactions recorded by the clearing houses to the grand total of banking transactions has declined, and the place of total bank clearings as a measure of business has been taken by total bank debits—*i.e.*, the totals of cheques charged to accounts at all banks. The total bank debits at all branch banks situated in the clearing-house cities of Canada have been compiled for 1924 and subsequent years by the Canadian Bankers' Association for the Dominion Bureau of Statistics, which has published the figures monthly and annually with interpretative analyses. Further, in order that an estimate might be made of the proportion of banking transactions outside the clearing-house cities to the total, the Canadian Bankers' Association secured for the month of January, 1929, the grand total of all cheques charged to accounts at all branch banks throughout the Dominion. The results were published in the Bureau's Monthly Review of Bank Debits for February, 1929, and showed that the aggregate of transactions outside the clearing-house cities was in January, 1929, 14½ p.c. of the grand total in the clearing-house cities. The corresponding figures in the five economic areas were as follows: Maritime Provinces 90·6 p.c., Quebec 6·1 p.c., Ontario 17·2 p.c., Prairie Provinces 18·6 p.c., British Columbia 14·3 p.c. Only in the Maritime Provinces does the total of bank debits in clearing-house cities appear to represent inadequately the grand total of business transactions throughout the whole area.

Clearing-House Transactions.—The following table shows for the years 1930-34 the total volume of clearings in the clearing houses of Canada. These figures, it may be added, represent not only actual city clearings but exchanges between numerous rural branches of the banks in each district.

The following is a description of the operation of the Central Clearing Settlement: From the beginning of 1927 until Mar. 9, 1935, balances due to or by each member of the Montreal, Toronto, Winnipeg and Vancouver clearing houses, after having been settled and declared by the clearing-house manager, were communicated daily (in the case of the three latter clearing houses by telegraph) to a trustee—The Royal Trust Company—in Montreal. Each bank lodged with the trustee a substantial sum in Dominion notes. The trustee on receipt of the daily advice, made the appropriate credit or debit entry in each account kept for each bank. In the usual course the trustee made the entries and balanced the accounts

for the day by twelve o'clock noon, and each bank was immediately notified of the state of its account; if the debits of the day on balance exceeded the amount of Dominion notes held for any bank by the trustee, the bank concerned delivered, within an hour of notification thereof, an amount in Dominion notes sufficient to give it a credit balance.

On Mar. 11, 1935, the Bank of Canada and its Agents took over the functions of The Royal Trust Company in this connection. It was arranged that the clearing house at Ottawa should participate directly in the Central Clearing Settlement. Each bank maintains in its account with the Bank of Canada, Ottawa, a balance (in excess of whatever deposit is maintained as part of the 5 p.c. reserve against deposit liabilities in Canada required by statute) deemed sufficient to settle its clearing obligations. The debit or credit balances of the banks at the specified points are daily communicated by the clearing-house manager, and confirmed by the respective bank, to the local Agent of the Bank of Canada (to the Bank of Canada in the case of Ottawa) for transmission to the Bank of Canada at Ottawa by telephone or telegraph, which bank on the same day debits or credits, as the case may be, the account of the respective bank maintained with the Bank of Canada.

Inasmuch as Montreal, Ottawa, Toronto, Winnipeg and Vancouver are the settlement points for the clearing houses in their respective zones, practically all the banking transactions of the country are adjusted daily in Ottawa in the accounts maintained by the banks with the Bank of Canada.

Bank clearings, though generally regarded as a leading barometer of business conditions, are defective in that they record only inter-bank transactions—transactions through which one bank becomes either the debtor or the creditor of another. They do not record the numerous transactions in which the transfer of value is made within a single bank, as, for example, where the purchaser and the seller of values that are paid for by cheque carry their accounts in the same bank. As the number of separate banks has in recent years been steadily diminishing through amalgamations, there being only 10 in December, 1934, as compared with 18 in 1923, inter-bank transactions are bearing a steadily decreasing proportion to the total of business transacted, a fact which goes far to explain the relative smallness of the increase in bank clearings from 1926 to 1929 and makes the extent of the subsequent decrease, as shown in Table **25**, open to question.

Bank Debits.—Since bank clearings have ceased to be a satisfactory measure of general business, the Bureau of Statistics in 1923 took up with the Canadian Bankers' Association the question of securing a record of bank debits, *i.e.*, of all cheques charged against accounts at all banks. The Bankers' Association agreed to secure from January, 1924, the monthly aggregate figures of the amount of cheques charged to accounts at all banking offices situated in the clearing-house centres of Canada, and the figures of cheques charged to accounts (bank debits) are given for the years 1930-34 in Table **26.**

It will be noted, as establishing the need of the newer record, that bank debits for 1932 decreased 40·6 p.c. as compared with those of 1928, while bank clearings in the later year show a decrease of 47·4 p.c. The bank debits are a comparable record for the five years; the bank clearings, owing to the reduction in the number of banks, are not a comparable record.

[1]Three months only, the Weyburn Security Bank having been absorbed by the Imperial Bank of Canada.

Subsection 4.—Government and other Savings Banks.

In a comparatively new country where capital is relatively scarce, it is a natural thing that the banks which finance the business institutions should also absorb the bulk of the people's savings for use in promoting the business of the country. Thus in Canada the great bulk of the current savings of the people is found in the savings or notice deposits of the Canadian chartered banks, the annual average figures of which are given for recent years in Table **10** of this chapter, the 1934 average being $1,372,817,869. Further, the current savings of the Canadian people are going very largely into the purchase of life insurance, the total premiums paid in the single year 1933 aggregating $214,852,668. In comparison with the enormous figures of notice deposits in chartered banks and with total insurance in force, the deposits in the special savings banks are comparatively small, but are none the less significant.

There are three distinct types of savings banks in Canada at the present time, in addition to the savings departments of the chartered banks and of trust and loan companies. First, there is the Post Office Savings Bank, the deposits in which are a direct obligation of the Dominion Government. Secondly, there are Provincial Government savings banking institutions in Ontario and in Alberta, where the depositor becomes a direct creditor of the province. Thirdly, there are in the province of Quebec two important savings banks, the Montreal City and District Savings Bank and the Caisse d'Economie de Notre-Dame de Québec, established under Dominion legislation and making monthly reports to the Department of Finance.

Dominion Government Savings Banks.—Prior to 1929 there were two classes of Dominion Government savings banks in Canada, the Post Office Savings Bank, under the Post Office Department, and the Dominion Government Savings Bank, attached to the Department of Finance. The former was established under the Post Office Act of 1867 (31 Vict., c. 10) in order "to enlarge the facilities now

available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the Dominion to every depositor for repayment of all money deposited by him together with the interest due thereon". Branches of the Government Savings Bank proper, under the authority of the Finance Department, were established in the leading cities of Canada under the management of the Assistant Receivers-General and in other places, in the provinces of Nova Scotia and New Brunswick, under managers appointed by the Governor in Council. The Dominion Government Savings Bank was amalgamated with the Post Office Savings Bank in 1929. Historical statistics for both systems will be found in Table 27 and more detailed figures covering the last six years in Table 28.

27.—Deposits with Dominion Government Savings Banks,[1] June 30, 1868-1906, and Mar. 31, 1907-34.

NOTE.—Figures for all intermediate years will be found on p. 833 of the 1926 Year Book.

Provincial Government Savings Banks.—Institutions for the deposit of savings are operated by the Provincial Governments of Ontario and Alberta, while a similar institution was in operation in Manitoba from 1924 to 1932 when the depositors' accounts were taken over by the chartered banks.

Ontario.—In the session of 1921, the Legislature of Ontario authorized the establishment of the Province of Ontario Savings Office, and in March, 1922, the first branches were opened. The funds received from this source are used almost exclusively to finance farm loans under the Agricultural Development Act. Interest at the rate of 2 p.c. per annum compounded half-yearly is paid on all accounts. The deposits are all repayable on demand. Total deposits on Mar. 31, 1935, were $22,326,489 and the number of depositors at that date was over 98,000. Eighteen branches are in operation throughout the province.

Alberta.—In Alberta the Provincial Treasury receives savings deposits and issues demand savings certificates bearing interest at 3 p.c., or term certificates for one, two or three years, in denominations of $25 and upwards, bearing interest at 3½ p.c. for one year and 4½ p.c. for two or three years. The total amount in savings certificates on Dec. 31, 1934, was $10,586,023, made up of $5,560,108 in demand certificates and $5,025,915 in term certificates.

Other Savings Banks.—The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871, had on Dec. 31, 1934, a paid-up capital and reserve of $4,500,000, savings deposits of $52,696,140 and total liabilities of $54,541,338. Total assets amounted to $59,305,992, including over $43,500,000 of Dominion, provincial and municipal securities. The Caisse d'Economie de Notre-Dame de Québec, founded in 1848 under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855 and given a Dominion charter by 34 Victoria, c. 7, had on Dec. 31, 1934, savings deposits of $12,697,544, a paid-up capital and reserve of $2,500,000 and total assets of $16,088,806.

The co-operative people's banks of Quebec (162 reported to the Provincial Government in 1933) are also an important element in promoting thrift and assisting business in that province. Thus on Dec. 31, 1933, savings deposits in these banks amounted to $5,586,812, while the amount on loan was $7,667,919. Loans granted in 1933 numbered 11,407 amounting to $1,682,551. Profits realized amounted to $452,220.

29.—Deposits in the Montreal City and District Bank and the Caisse d'Economie de Notre-Dame de Québec, as at June 30, 1868-1906, and Mar. 31, 1907-34.

NOTE.—Figures for all intermediate years will be found on p. 833 of the 1926 Year Book.

Section 3.—Loan and Trust Companies.

Business such as that now transacted by loan and trust companies was first carried on by an incorporated Canadian company in 1844, when the Lambton Loan and Investment Co. was established, while the Montreal Building Society was incorporated by c. 94 of the Statutes of 1845. In order to legalize and encourage such operations in Upper Canada, an Act was passed by the Canadian Legislature in 1846, followed in 1847 and 1849 by Acts in New Brunswick and Nova Scotia respectively. These early companies were termed building societies; their activities comprised mainly the lending of money on the security of real estate and also the lending of money to members without their being liable to the contingency of losses or profits in the business of the society. In addition to these operations, such companies were authorized by an Act of 1859 to "borrow money to a limited extent". Later, by the Building Societies Act of 1874, authority was given to receive money on deposit and to issue debentures, subject to certain restrictions as to amounts of deposits.

The number of loan and savings societies in operation and making returns to the Government at Confederation was 19, with an aggregate paid-up capital of $2,110,403 and deposits of $577,299. Rapid increases in the number of companies and total volume of business resulted from subsequent legislation until in 1899 102 companies (including trust companies) made returns, showing capital stock paid up of $47,337,544, reserve funds of $9,923,728 and deposits of $19,466,676; total liabilities had increased from $3,233,985 to $148,143,496 between 1867 and 1899. By 1913 the number of companies had declined, through amalgamations and absorptions, to 74 (including 16 trust companies) with a combined paid-up capital of $68,091,042, reserves of $35,959,342, deposits of $32,681,806 and total liabilities of $478,658,228.

The laws relating to trust and loan companies were revised by the Loan and Trust Companies Acts of 1914 (4-5 Geo. V., cc. 40 and 55), with the result that the statistics of provincially incorporated loan and trust companies ceased to be collected. The statistics of Tables **31** and **32** refer only to those companies operating under Dominion charter, except that, beginning in 1925, the statistics of loan companies and trust companies incorporated by the province of Nova Scotia, and brought by the laws of that province under the examination of the Dominion Department of Insurance, have been included. Also, since 1922 provincially incorporated loan and trust companies have made voluntary returns of their statistics to the Dominion Department of Insurance, so that all-Canadian totals are again available for recent years. As indicating the progress of the aggregate of loan company business in Canada, it may be stated that the book value of the assets of all loan companies rose from $188,637,298 in 1922 to $213,649,794 in 1931, although declining slightly to $205,791,934 in 1933. The total assets in the hands of the trust companies increased from $805,689,070 in 1922 to $2,553,694,019 in 1933. The latter figure included $2,328,615,120 of "estates, trusts and agency funds". (Table **30A.**)

Functions of Loan Companies.—The principal function of loan companies is the lending of funds on first mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings department deposits. Of the loan companies operating under provincial charters, the majority conduct loan, savings and mortgage business, generally in the more prosperous farming communities.

Functions of Trust Companies.—Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents or attorneys in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies and, where so appointed, as authorized trustees in bankruptcy. Some companies receive deposits, but the lending of actual trust funds is restricted by law. The figures of Tables **30** and **30A** are of particular interest in the case of trust companies, which, on account of the nature of their functions, are mainly provincial institutions, since their chief duties are intimately connected with the matter of probate, which lies within the sole jurisdiction of the provinces.

30.—Summary Statistics of the Operations of Dominion and Provincial Loan and Trust Companies in Canada, as at Dec. 31, 1932.

[1] Includes statistics of trust companies chartered by the Government of Nova Scotia but inspected by the Dominion Department of Insurance.

[2] Includes money in trust for investment amounting to $2,562,455 in 1914, $3,113,170 in 1915, $3,799,149 in 1916, $3,443,682 in 1917, and $5,170,463 in 1918; corresponding amounts are included under the heading "Estate, trust and agency funds" for the years 1920 to 1933. The figures for 1919 are not available.

[3] Revised since the publication of the 1933 Year Book.

Section 4.—Sales of Canadian Bonds.

Interesting aspects of public financing and of the investment of capital in Canadian development during the twentieth century are illustrated by the sales of Canadian bonds since 1911 shown in Table **33.** (The figures are reproduced from the *Monetary Times Annual,* 1935.) In the first part of this table, the bonds sold in each year are divided according to whether the financing was for Dominion or Provincial Governments, or for municipalities, railways or other corporations, while in the second part of the table the sales in each year are distributed according to sales in Canada, the United States and the United Kingdom.

The total sales of Canadian bonds naturally reached a very high mark toward the close of the War owing to the Dominion Government financing required to cover the war expenditures. However, the total sales were greater in 1931 than in any other year, owing largely to the Dominion Government's conversion loans.

Dominion Government financing through bond sales since 1907 may be divided into three periods: the first from 1908 to 1914, when the money was required largely for internal development of the country, public works and Government railways; the second from 1915 to 1919, when war expenditures required very large borrowings; and the third since the War, when the issues have been largely required for refunding former loans at lower interest rates and for expenditures in connection with public works and railways.

Provincial bond issues have been on a much larger scale since the War than formerly, probably due to the development of provincially-owned public utilities and of improved highways. Sales of the bonds of Canadian municipalities, on the other hand, were greater in 1913, toward the end of the "land boom", than they have been in any other year, although sales in 1930 almost reached the record. However, allowing for the increased population in cities and towns, there has not been the same marked increase in the average annual sales of municipal bonds in the period since the War, as compared with the period before the War, that is noticeable in the case of provincial bonds.

Sales of corporation bonds, which from 1926 to 1930 had averaged over $257,000,000 per year, dropped to $10,550,000 in 1932, and to $4,385,000 in 1933, this being largely due to the uncertainty of the industrial outlook. Railway bonds showed a somewhat similar decline to $12,500,000 in 1932, and to only $1,000,000 in 1933. In 1934 substantial recoveries were shown in both classes.

A very striking change has taken place during the present century in the market in which Canadian bond issues are principally sold. Prior to the War, a great part of the capital required for Canadian development came from the United Kingdom, and the major portion of Canadian bond issues was sold there. The outbreak of war temporarily eliminated that market, and Canadians turned largely to the United States for outside capital. However, the great increase in wealth during and since the War has enabled a much greater proportion of public and industrial financing to be done at home, and beginning with the Victory Loan campaings, Canadians not only learned how to invest their money in bonds, but had the necessary funds to invest on a large scale in bond issues. These facts are reflected by the figures in Table **33** showing that since 1915 a greatly increased proportion of the total issues of Canadian bonds has been sold within Canada. Thus, in 1934, 83 p.c. of all bonds issued were sold in Canada, 8 p.c. in the United States and 9 p.c. in the United Kingdom.

33.—Sales of Canadian Bonds, by Class of Bond and Country of Sale, calendar years 1911-34.

(From the *Monetary Times Annual*. Figures for 1904-10 inclusive will be found at p. 921 of the 1933 Year Book.)

Section 5.—Corporation Dividends.

(From the *Financial Post Business Year Book.*)

The 1934 improvement in Canadian business, as indicated by higher corporate earnings, was reflected in the total annual dividend payments of $185,759,716, compared with $134,679,359 in 1933, or a gain of 37·9 p.c. Every month of the year except September showed an increase; the then decrease was due to the change of dividend policies of Imperial Oil and International Petroleum, whereby these two organizations went on a semi-annual basis as contrasted to their former quarterly payments. Bonus payments from a few large industrial companies and a number of mining companies, plus initial dividends by some of the new mines, helped to swell the December total far above the 1933 figure. In Table **34** below there is given a six-year record of aggregate monthly dollar payments and yearly totals for all companies paying dividends in Canada:—

34.—Dividend Payments by Canadian Companies, 1929-34.

Section 6.—Foreign Exchange.

The Canadian dollar, adopted as our currency in 1857, was equivalent to 15/73 of the pound sterling; in other words, the pound was equal to $4·866 in Canadian currency at par, and remained so, with minor variations between the import and export gold points representing the cost of shipping gold in either direction, until the outbreak of the Great War. Further, during the first eleven years after Confederation, the Canadian dollar was at a premium in the United States, as the United States dollar was not, after the Civil War, redeemable in gold until 1878. From the latter date, the dollar in the two countries was equivalent at par, and the variation was only between the import and export gold points or under $2 per $1,000.

At the outbreak of the Great War, both the pound sterling and the Canadian dollar were made inconvertible into gold and fell to a discount in New York, though this discount was "pegged" or kept at a moderate percentage by sales of United States securities previously held in the United Kingdom, borrowing in the United States, and, after the United States entered the War, by arrangements with the United States Government. After the War, the exchanges were "unpegged" about November, 1920, and the British pound went as low as $3.18 and the Canadian dollar as low as 82 cents in New York. In the course of the next year or two, exchange was

brought practically back to par, and the United Kingdom resumed gold payments in 1925 and Canada on July 1, 1926. From then until 1928 the exchanges were within the gold points, but in 1929 the Canadian dollar again fell to a moderate discount in New York.

Recent Movements in Canadian Exchange.*—Because Canada has no foreign exchange mechanism of her own, Canadian transactions in exchange and monetary gold have been governed by New York and London. The United Kingdom buys much more from Canada than Canada buys from her, but the reverse is the case as regards the trade between Canada and the United States. The result is that there is a supply of bills on London in excess of the amount needed to meet current obligations in the United Kingdom. By offering these for sale for United States funds in London or New York, a triangular balance is approximated by book transactions and without the cross transfers of the larger quantities of gold which would otherwise be necessary. The volume of sterling exchange on Canadian account thus passed to the New York market does not greatly influence New York rates of sterling exchange under normal conditions; on the contrary, the volume of the New York-London transactions is sufficient to carry the Canadian rates along with them. Canadian exchange transactions with other countries are handled through London or New York and are unimportant of themselves, depending on the relationships with Canadian-New York and Canadian-London transactions.

In September, 1931, the equilibrium of international exchange was seriously disturbed. This unfortunate turn of events followed a period of over six years during which the nations of the world had worked steadily towards the stabilization of their currency systems upon a gold basis. Within two months of the time when the United Kingdom found it necessary to suspend free gold shipments, however, only a very small number of countries, including the United States and France, were left with currencies unshaken by preceding abnormal gold movements. The decision of the United Kingdom to go off the gold standard (Sept. 21, 1931) resulted in a sharp depreciation of sterling in New York, and partly owing to the triangular nature of the situation, but in some measure due to the immediate withdrawals of funds from Canadian banks by United States interests, short selling of Canadian exchange and other influences, Canadian rates depreciated also and fluctuated broadly with sterling until the United States dollar dropped from the ranks of gold standard currencies on April 19, 1933.†

During the balance of that year, the premium on United States dollars at Montreal gradually diminished from approximately 20 p.c. until in November it was replaced by a small discount of about 1 p.c. The pound sterling meanwhile advanced from $4·234 in April to $5·082 in November. The course of foreign exchanges throughout 1934 was more stable than it had been since 1931. Sterling reacted gradually until it reached its former parity of $4·866 in September, and subsequent fluctuations centered around that level. This movement was accompanied by minor irregular changes in the United States dollar, which regained a fractional premium early in 1935. The Montreal premium on gold currencies has risen until it stood in the early part of 1935 at approximately 65 p.c.

*Revised by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics.

†The U.S. dollar was subsequently replaced on a gold basis on Jan. 31, 1934, but the gold content of that dollar was reduced from 23·22 grains to 15 5/11 grains, or 1/35 of an ounce. The new U.S. gold dollar, therefore, has a gold content equal to 59·06 p.c. of that of the former gold dollar.

CHAPTER XXIII.—INSURANCE.*

Insurance business is transacted in Canada by companies of the following classes, *viz.*, (1) companies incorporated under the laws of the Dominion of Canada or of the former "Province of Canada", (2) companies incorporated under the laws of the provinces of Canada, and (3) companies incorporated or formed under the laws of British and foreign countries. The word "companies" as here used, includes fraternal benefit societies, associations and exchanges which transact the business of insurance. The Dominion Insurance Acts provide that companies of classes (1) and (3) above may not transact business anywhere in Canada unless registered† by the Dominion, but these Acts also provide that fire insurance on property in Canada may be effected in companies of class (3) even though not registered, if the insurance is effected without solicitation, advertising or the use of the mails, and if an office is not maintained in Canada, though property to be insured may be inspected and losses may be adjusted. Insurance so effected is generally known as "unlicensed insurance". Companies of class (2) above may transact business in the province of incorporation, subject to compliance with the laws thereof, or in any other province subject to compliance with the laws thereof, or, on compliance with the Dominion laws, may be granted Dominion registration. Most of these companies limit their business to the province of incorporation or to one or more other provinces; a few only have been granted Dominion registration.

What has been said above implies that jurisdiction concerning insurance companies and insurance business is divided between the Dominion and the provinces. There have been many references to the courts and appeals to the Privy Council with a view to determining the respective legislative domains, both in respect of insurance legislation specifically and in respect of legislation affecting companies generally, including insurance companies. The last Privy Council decision was handed down in 1931. It may now be taken as established that the Parliament of Canada may require companies formed or incorporated outside of Canada to obtain Dominion registration and continue to be so registered as a condition of transacting business in Canada, and these companies may be required to make returns from time to time of their business and doings in Canada and to furnish evidence of their solvency. The powers of the Dominion go much farther in reference to companies incorporated by the Parliament of Canada, but include all of the powers which may be exercised over companies formed or incorporated outside of Canada and registered by the Dominion. The Acts passed in 1932‡ implement the powers of the Dominion as determined by the Privy Council decisions.

The Dominion Acts under which companies are registered are administered by the Department of Insurance under the Minister of Finance. The chief officer of the Department of Insurance is the Superintendent of Insurance. The first Superintendent was appointed in 1875 as head of a newly created Insurance Branch of the Department of Finance. In 1910 the Insurance Branch was constituted into a separate Department, the Department of Insurance, under the Minister of Finance.

*The statistics of Fire, Life and Miscellaneous Insurance have been revised by G. D. Finlayson, Superintendent of Insurance, and those pertaining to Government Annuities (Section 4) by W. M. Dickson, Deputy Minister of Labour.

†Prior to 1932, the Dominion Insurance Acts provided for the "licensing" of companies; the Acts passed in 1932 provide for "registration". The change in terminology does not indicate any change in substance.

‡The Canadian and British Insurance Companies Act, 1932 (22-3 Geo. V, c. 46). The Foreign Insurance Companies Act, 1932 (22-3 Geo. V, c. 47).

Precedent to obtaining first registration, in addition to filing certain documents, including a full and complete financial statement, a company must satisfy the Minister that it is sound and solvent and must make the required initial deposit of securities, varying from $10,000 to $100,000, depending on the class of business to be undertaken. Annual returns are required of all registered companies and the Acts require an examination to be made, by the Superintendent or on his behalf, of the books and records of companies with a view to substantiating the accuracy of the statements filed and the soundness of the companies. Should any company show an unsatisfactory financial condition, the Acts require immediate remedial measures to be taken. British and foreign companies are required to maintain in Canada assets sufficient to cover all of their liabilities in Canada, while Canadian companies are required to maintain in Canada all of their assets, except such as it may be necessary to deposit outside of Canada as security for "outside of Canada" business.

The statistics herein given in respect of companies registered by the Dominion are divided into three classes relating to: (1) insurance against fire, (2) life insurance, and (3) miscellaneous insurance, *viz.*, accident, automobile, aviation, burglary, credit, earthquake, explosion, forgery, guarantee, hail, leakage, live-stock, sickness, steam boiler, title, tornado and weather insurance. These statistics are compiled from the reports of the Department of Insurance; throughout they apply to calendar years.

Since 1915, the Department of Insurance has collected statistics, included herein, of business transacted by provincial companies licensed by the provinces, classified as to: (1) business transacted within the province of incorporation, and (2) business transacted in other provinces.

Returns in respect of "unlicensed insurance", above referred to, were required under Section 16 of the Special War Revenue Act for taxation purposes, and statistics compiled from these returns were published in the Canada Year Book, prior to the 1933 edition, as Table 8. This section of the Act having been held unconstitutional by Privy Council decision, Oct. 22, 1931, on an appeal from the Court of the King's Bench of the province of Quebec, the returns for 1930 were incomplete and were not published in the 1933 Year Book. By an amendment to the Act at the 1932 session of Parliament, a section analogous to Section 16 was enacted, applicable to unlicensed insurance and Table 8 is therefore revived in the present edition (see p. 1016).

Statistics of Dominion Government annuities are given at the end of this chapter. The Department of Labour administers the Acts under which these annuities are sold.

Section 1.—Fire Insurance.

Fire insurance in Canada began with the establishment by British fire insurance companies of agencies, usually situated in the sea ports and operated by local merchants. The oldest existing agency of a British company is that of the Phœnix Fire Office of London, now the Phœnix Assurance Co., Ltd., which commenced business in Montreal in 1804. On account of the growth of the insurance business of these early British companies, branch offices were established and local managers were appointed, charged with directing the companies' affairs in Canada.

The Halifax Fire Insurance Co. is the first purely Canadian company of which any record is available. Founded in 1809 as the Nova Scotia Fire Association, it was chartered in 1819 and operated in the province of Nova Scotia until 1919,

when it was granted a Dominion licence. Among the other pioneer fire insurance companies still in operation, mention may be made of the following: the Quebec Fire Assurance Co., which commenced business in 1818 and was largely confined in ownership and operations to Quebec province; the British America Assurance Co., incorporated in 1833, the oldest company in Ontario; the Western Assurance Co., organized in 1851, and, after a rapid and steady growth, one of the largest companies of its kind on the continent; two United States companies, the Ætna Insurance Co., Hartford, Conn., and the Hartford Fire Insurance Co., which commenced business in Canada in 1821 and 1836 respectively.

The report of the Superintendent of Insurance for the year ended Dec. 31, 1933, shows that at that date there were 240 fire insurance companies doing business in Canada under Dominion licences; of these 49 were Canadian, 67 were British and 124 were foreign companies, whereas in 1875, the first year for which authentic records were collected by the Department of Insurance, 27 companies operated in Canada—11 Canadian, 13 British and 3 American. The proportionate increase in the number of British and foreign companies from 59 p.c. to almost 80 p.c. of the total number is a very marked point of difference between the fire and life insurance businesses in Canada, the latter being carried on very largely by Canadian companies.

Although in its early days the Dominion did not prove a very lucrative field for fire insurance companies, the great advance in building construction and the wide use of improved fire appliances and safety devices have materially reduced the danger of serious conflagrations and have placed the risks assumed by companies in Canada on an equality with those of other countries.

A feature of the fire insurance business, besides the large percentage of British and foreign companies, is the continued increase in the number of companies which are operating on the mutual or reciprocal plan. These companies, in which all profits or losses are directly received or paid by the policyholders, are making themselves felt as competitive factors in the fire insurance business.

Statistics of Fire Insurance.—Statistical tables of fire insurance in Canada follow, illustrative of the progress of total business since 1869 and of the operations of individual companies for the year 1933. The net amount of fire insurance in force on Dec. 31, 1933, with companies holding Dominion licences, was $9,008,262,736, while the net amount in force with provincial companies on the same date was $1,190,180,426. In addition, policies amounting to $442,826,911 were in force during the year 1933 with companies, associations or underwriters not authorized to transact business in Canada. Thus the grand total fire insurance in force on Dec. 31, 1933, probably approximated $10,600,000,000.*

Table **1** shows figures of the growth since 1869 of companies registered by the Dominion, the relationship between losses paid and net premiums written, and the variation in the cost per $100 of insurance. It will be observed that the cost of insurance reached a maximum in 1904 and 1905; there has since been a steady decrease with the exception of the years 1921, 1922 and 1924, when temporary reversals of the downward swing were in evidence. It is noteworthy that the cost of fire insurance has decreased by 53·75 p.c. since 1905. Table **2** shows the business done in Canada by individual companies during the year 1933, while in Tables **3, 4** and **5** are given figures of the assets, liabilities, incomes and expenditures during the years 1929 to 1933, classified by nationality of companies. A further summary of

*According to preliminary figures fire insurance in force in companies registered by the Dominion decreased by $171,660,559 in 1934.

business is given by provinces in Table **6** for the years 1932 and 1933, showing premiums and losses classified by provinces and by nationality of companies. Further, a summary of the business transacted by both Dominion and provincial licensees is given in Table **7**, and a general summary of the business of companies not registered under Section 148 of the Canadian and British Insurance Companies Act, 1932, or Section 65 of the Foreign Insurance Companies Act, 1932, is given in Table **8**.

1.—Summary Statistics of Fire Insurance in Companies Operating under Dominion Licences, calendar years 1869-1934.

Year.	Amount in Force at End of Year.	Net Premiums Received during Year.	Losses Paid during Year.	Percentage of Losses to Premiums.	Gross Amount of Risks Taken during Year.	Premiums Charged thereon.	Average Cost per $100 of Insurance.

Summary of Fire Insurance in Canada, 1933.—Of the total amount of fire insurance effected in Canada during each year, a part is sold by companies holding provincial licences and permits. Such companies generally confine their operations to the province of incorporation, but may be allowed to sell insurance in other provinces. The bulk of fire insurance business, however, is transacted by companies registered by the Dominion. Operations in 1933 are summarized in Table 7.

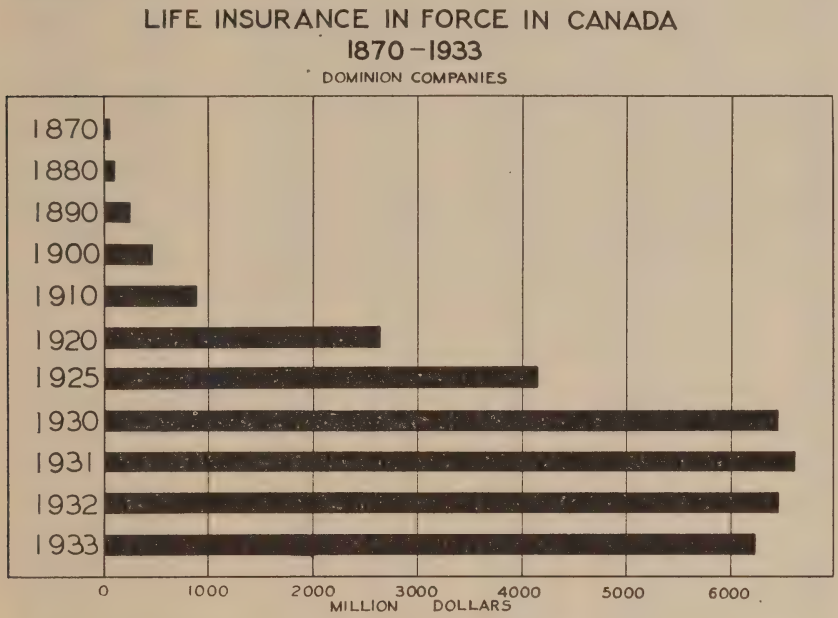
Section 2.—Life Insurance.

An article descriptive of the growth and development of life insurance in Canada, contributed by A. D. Watson, of the Department of Insurance, Ottawa, appeared on pp. 937-944 of the Canada Year Book, 1933.



Life Insurance Statistics.—Life insurance business was transacted in Canada in 1933 by 42 companies licensed by the Dominion, including 27 Canadian, 6 British and 9 foreign companies. There were also 6 British and 5 foreign companies registered to write insurance but which had practically ceased to write new insurance, while 4 other British and 4 other foreign companies were authorized under the Act to transact business in connection with policies written prior to Mar. 31, 1878. One British company which retired as a writer of new insurance in 1878 has ceased all operations and has withdrawn from Canada. One foreign company, which also retired in 1878, was placed in the hands of a receiver in 1933 and has since reinsured all its Canadian policies with a Canadian company. One other foreign company was licensed to transact business in 1931, but has not yet written any life insurance business in Canada.

As shown by the historical statistics of Table 9, life insurance business in Canada has expanded from very small beginnings, the total net life insurance in force in all companies licensed by the Dominion in 1869 being only $35,680,082, while in 1933 it was $6,247,625,974,* the amount per head of the estimated population of Canada having more than doubled since 1919—an evidence of the general

*This total does not include $170,713,510 of fraternal insurance. Preliminary figures for 1934 indicate $6,220,102,835 of life insurance in force in Dominion companies not including $167,559,340 of fraternal insurance.

recognition of the value of life insurance for the adequate protection of dependants against misfortune. Notable also from these historical statistics is the fact that in this field British companies, which were the leaders in 1869, have fallen far behind the Canadian and the foreign companies. The total net amount of new insurance effected during the year 1933 was $578,585,659*, as compared with $653,249,366 in 1932, $782,716,064 in 1931, $884,749,748 in 1930 and $978,141,485 in 1929, while the premiums paid were $206,954,224, as compared with $216,132,957 in 1932, $225,100,571 in 1931, $220,523,727 in 1930 and $210,728,479 in 1929.

The following diagram shows the rapid increase of life insurance in force in companies licensed by the Dominion between 1870 and 1931, and the slight decline between the latter year and 1933.

In Table **10** detailed statistics are given of the business of Canadian, British and foreign companies, respectively, by companies, in 1933, while Table **11** is a summary showing the business of Canadian, British and foreign companies for the past 5 years. Table **12** shows the ordinary and industrial policies in force and effected during the year ended Dec. 31, 1933. Table **13** gives the insurance death-rate by classes of companies, and Tables **14, 15** and **16** show, respectively, the assets, liabilities, cash income and expenditure of Canadian and other life insurance companies for the years 1929-33. Statistics of Dominion fraternal insurance are given in Table **17** and of Dominion and provincial insurance combined in Table **18**, which shows that on Dec. 31, 1933, the total life insurance in force in Canada was $6,589,133,575.

*The net amount of new insurance effected in 1934 was $596,062,050 according to preliminary figures. This is the first time an increase has been indicated since 1929.

[1]Figures do not include insurance in force and effected by Fraternal Societies operating under Dominion charters. The amount of insurance in force in such societies amounted to $167,559,340 in 1934, according to preliminary figures. Corresponding figures for the years 1929-33 are given in Table **17**, pp. 1025-1026.

[3]Subject to revision.

10.—Life Insurance In Force and Effected in Canada, by Compan es, 1933.

NOTE.—The statistics of this table do not include the business of Canadian companies outside of Canada.

Company.	Policies Effected.		Policies in Force.		Net Premium Income.	Net Amount of Policies Become Claims.[1]

14.—Assets of Canadian Life Companies and Assets in Canada of Life Companies other than Canadian Companies, 1929-33.

NOTE.—Certain British companies transacting fire insurance in Canada transact also life insurance in Canada, and inasmuch as a separation of assets has not been made between these two classes, their assets in Canada are not included here, but are included in the assets of British companies shown in Table 3 on pp. 1012-1013.

[1]Includes expenditure on business outside of Canada. [2]Expenditure in Canada.

Life Insurance Effected through Fraternal Benefit Societies.—In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table **17** gives statistics of life insurance effected with fraternal benefit societies by Canadian members, together with statistics of assets, liabilities, income and expenditure relating to the whole business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. Each benefit fund of every society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries, London; of the Faculty of Actuaries in Scotland; of the Actuarial Society of America; or of the American Institute of Actuaries), and unless the actuary certifies to the solvency of each fund a readjustment of rates or benefits must be made. The statistics in the first part of this table relate to the Canadian societies reporting to the Insurance Department of the Dominion Government. These numbered 9 in 1933, *viz.*, Alliance Nationale, Ancient Order of Foresters, Artisans Canadiens-Français, Canadian Woodmen of the World, Catholic Mutual Benefit Association, Commercial Travellers' Association of Canada, Independent Order of Foresters, Grand Orange Lodge of British America and the Ukrainian Mutual Benefit Association of St. Nicholas of Canada.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were requested to obtain Dominion authority precedent to transacting business in Canada, but any such societies which at that date were transacting business under provincial licences, while forbidden to accept new members, were permitted to continue all necessary transactions in respect of the insurance of their then members. Most of these societies have since obtained Dominion

authority to transact business, also some foreign societies which had not previously been licensed by the provinces. Of both classes of societies, 25 transacted business in Canada in 1933, *viz.*, Aid Association for Lutherans, Association Canado-Américaine, Catholic Order of Foresters, Commercial Travelers' Mutual Accident Association of America (accident business only), Expressmen's Mutual Benefit Association, First Catholic Slovak Union, First Catholic Slovak Ladies' Union, Jewish National Workers' Alliance, Knights of Columbus, Ladies' Catholic Benevolent Association, Lutheran Brotherhood, Lutheran Mutual Aid Society, Maccabees, Modern Woodmen of America, National Fraternal Society of the Deaf, National Slovak Society of U.S.A., Royal Arcanum, Royal Clan (Order of Scottish Clans), Slovene National Benefit Society, Sons of Norway, United Commercial Travelers of America (accident business only), Women's Benefit Association, Women's Catholic Order of Foresters, Workmen's Circle and Yeomen Mutual Life Insurance Company which is continuing the business issued by the Brotherhood of American Yeomen.

17.—Statistics of Fraternal Benefit Societies' Insurance, 1929-33.

Summary of Life Insurance in Canada, 1933.—In addition to the business transacted by life insurance companies registered by the Dominion, a considerable volume of business is also transacted by companies licensed by the provinces. Statistics of these provincial companies have been collected since 1915 by the Department of Insurance. Table **18,** showing policies effected and in force, premiums received and losses paid, in Canada in 1933, summarizes the volume of business done by both life companies and fraternal societies, whether registered by the Dominion or licensed by the provinces.

Section 3.—Miscellaneous Insurance.

Since 1875 the growth of insurance business other than fire and life has been steady. The report of the Superintendent of Insurance for the calendar year 1880 shows that the number of companies licensed for the transaction of accident, guarantee, plate glass and steam boiler insurance—the only four classes of miscellaneous insurance then transacted—was 5, 3, 1 and 1 respectively. The report for the year 1933 shows that miscellaneous insurance in Canada now includes: accident, automobile, aviation, burglary, credit, earthquake, explosion, forgery, guarantee, hail, leakage, live-stock, steam boiler, title, tornado, weather insurance, etc. In 1880, 10 companies transacted business of the miscellaneous kind but in 1933 such insurance was issued by 243 companies, of which 50 were Canadian, 61 British and 132 foreign; 182 of these 243 companies also transacted fire insurance. In addition, 17 fraternal orders or societies carried on sickness insurance as well as life insurance business.

Accident Insurance.—The first licence of this kind was issued to the Travelers' Co., of Hartford, Conn., in 1868. The first licence to a Canadian company was issued to the Accident Insurance Co. of Canada, which was organized in 1872 and commenced business in 1874. Much accident insurance has also been sold by companies doing primarily a life insurance business. Seventy-seven companies transacted accident insurance in 1933.

Automobile Insurance.—This is now one of the most important branches of the miscellaneous class of insurance. Premiums increased from $80,446 in 1910 to $573,604 in 1915 and to $18,260,176 in 1930; for 1933 they were $11,933,574, showing decreases of 17·5 p.c. compared with 1932 and 34·6 p.c. compared with 1930. There has been an increase in the number of companies from 7 to 170 during the 23-year period.

Plate Glass Insurance.—Policies were first sold in Canada by the Metropolitan Plate Glass Insurance Co., a United States concern, which withdrew from Canada during 1882 to avoid business restrictions. The 79 companies operating in Canada in 1933 received premiums of $468,120 and incurred claims of $243,627, compared with premiums of $510,543 and claims of $244,152 for 1932.

Burglary Insurance.—In 1893 only one company issued burglary policies. A second followed in 1905 and in 1910 five companies were operating, while 75 companies sold this type of insurance during 1933. The premium income of these companies amounted in 1933 to $1,126,613, and the losses incurred amounted to $519,045.

Hail Insurance.—Insurance against hailstorms is a class of business of comparatively recent development in Canada. During the year 1933, 40 companies undertook this class of risk, the premiums written amounting to $494,402, and the losses incurred to $236,632. The total premiums for the 24 years during which this business had been carried on in Canada amounted to $66,438,192 and the total losses paid to $45,695,801.

[1] This business was transacted by companies not holding certificates of registry to transact fire insurance.
[2] Excluding $1,466,989, premiums of fraternal benefit societies for accident, sickness and funeral business.
[3] Excluding $939,465, losses of fraternal benefit societies for accident, sickness and funeral business.

Section 4.—Government Annuities.

In the early years of the 20th century, there arose throughout the civilized world a distinct movement in favour of ameliorating the living conditions of the less well-off members of society. One form which this movement took in the United Kingdom was that of old age pensions, granted by the State as a gift to its poorer citizens, whose earnings were very generally insufficient to permit of a margin of saving. In Canada, where wages were higher and a margin of saving was possible, the movement at first took the form of providing, by establishing Government annuities, an absolutely safe investment for such savings, which had only too often been lost through the inexperience of their owners, leaving the latter a burden upon the charity of relatives or of the public.* The cost of administering these annuities is borne by the Dominion Government.

Under the Government Annuities Act (c. 7, R.S.C., 1927, amended by c. 33, R.S.C., 1931), His Majesty the King, represented by the Minister (at present the Minister of Labour), may sell to persons over the age of 5 years, domiciled or resident in Canada, immediate or deferred annuities of not less than $10 nor more than $1,200 (1) for the life of the annuitant, (2) for a term of years certain, not exceeding 20 years, or for the life of the annuitant, whichever period shall be the longer, or (3) to any two persons domiciled in Canada during their joint lives, and with or without continuation to the survivor. The property and interest of any annuitant in any contract for an annuity is neither transferable nor attachable. The purchaser may contract that, in the event of the death of the annuitant before the date fixed for the annuity to begin, all money paid shall be refunded to the purchaser or his legal representatives with interest at the rate of 4 p.c., compounded yearly.

From Sept. 1, 1908, the date of the inception of the Annuities Branch, up to and inclusive of Mar. 31, 1934, the total number of annuity contracts issued was 18,806. Of these contracts, 2,241 have been cancelled, leaving in force on Mar. 31, 1934, 16,565 contracts. The total amount of purchase money received during the same period was $43,285,490. Table 23 gives the details of annuities contracted for and purchase money received from 1909 to 1934, by years.

*A Dominion-Provincial non-contributory scheme of old age pensions, providing for the payment, to persons 70 years and over, of pensions not exceeding $20 per month, contributed by the Dominion and the provinces which become parties to the scheme, was enacted by Chapter 35 of the Dominion Statutes of 1927. The system is now in effect in British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, Nova Scotia, Prince Edward Island, and the Northwest Territories. For further particulars, see pp. 837-838.

[1]Seven months.

Statistics of the Annuities Fund and value of all contracts issued are given in Tables **24** and **25.** From Sept. 1, 1908 to Mar. 31, 1934, 18,806 annuities had been issued. On Mar. 31, 1934, 6,858 immediate annuities and 9,707 deferred annuities were in force. The total value of these annuities on that date was $35,169,533 and the amount of immediate annuities in force on that date was $2,844,154.

[1]Amount of immediate annuities.

It will be seen from the statements above that Government Annuities have grown steadily in favour, especially since 1921, the fund reaching a total of $35,023,476 on Mar. 31, 1934.

CHAPTER XXIV.—COMMERCIAL FAILURES.

According to Section 91 of the British North America Act, "the exclusive legislative authority of the Parliament of Canada" extends to bankruptcy and insolvency legislation, and an Insolvency Act (32-33 Vict., c. 16) was actually passed by the Dominion Parliament in 1869, applying to the four original provinces. This Act was in force for four years and was renewed by c. 46 of the Statutes of 1874, while in 1875 a new Insolvency Act (38 Vict., c. 16) applicable to the whole Dominion was passed, but was repealed in 1880. After this there was no Dominion legislation on the subject of bankruptcy until 1919. During the interval of nearly 40 years commercial failures were handled under provincial legislation, and the statistics relating to such failures during this period were compiled and published by Dun's and Bradstreet's commercial agencies. In 1919 a general Dominion Bankruptcy Act was passed (9-10 Geo. V, c. 36). Statistics of commercial failures dealt with under this Act since it came into force in 1920 have been compiled and published by the Dominion Bureau of Statistics. (See pp. 1036-1038.)

The history of commercial failures in Canada is traced by years from 1915 in Table **3.**

Failures, by Divisions of Industry.—In every year the great majority of the commercial failures of the country are found among the trading establishments which are so much more numerous than the manufacturing. Thus, according to Dun and Bradstreet's records, out of a total of 1,627 commercial failures in Canada in 1934, 1,027 were among the retail trading establishments, including 413 in food, 195 in textiles and clothes and 104 general stores.

Out of the 389 manufacturers who failed, 93 were in foods, 63 in the textiles and clothes business and 46 among manufacturers of forest products. The larger scale on which manufacturers operate is evident from the fact that the defaulted liabilities of the 389 manufacturers were nearly as great as those of the 1,027 retail traders. The figures of commercial failures are analysed in detail for the years 1933 and 1934 in Table **1**, while the totals are given by provinces for the same years in Table **2**.

[1] Canada only.

Assignments under the Bankruptcy and Winding Up Acts.—Under the Bankruptcy and Winding Up Acts (R.S.C., 1927, cc. 11 and 213) certain documents relating to assignments have, since 1920, been forwarded to the Dominion Statistician for statistical analysis. Table 4 gives the resulting figures of failures, by provinces, in 1922 and subsequent years, while Table 5 classifies them by branches of business. Table 6 gives the assets and liabilities of the assignors. A detailed analysis of the 1933 and 1934 failures, by provinces and branches of business, is made in Tables 7 and 7A.

Administration of Bankrupt Estates.—The administration of bankrupt estates is now carried on by the Superintendent of Bankruptcy, appointed in 1932, with the object of conserving as far as possible the assets of bankrupt estates for the benefit of the creditors. His first report, covering the period from Dec. 1, 1932, to Dec. 31, 1933, indicates that, during the calendar year 1933, 850 bankrupt estates were closed up under the supervision of his office. The following figures for these estates show how wide is the gulf between the optimistic value of assets by debtors at the time of assignment as compared with the actual realization: total liabilities estimated at $8,629,392; total assets valued (by debtors) at $9,207,503; total actually realized $1,880,015. The amount realized was distributed as follows: payments to creditors $1,449,392; payments to debtors in lieu of exemptions $6,790; administrative costs $423,833. In 1934 the estimated assets of the 1,620 estates closed were $14,887,298, the total receipts $3,800,996 and the cost of administration $880,803.

CHAPTER XXV.—EDUCATION.

Section 1.—Schools, Colleges and Universities.*

Throughout the Dominion of Canada public education, except for instruction of the native Indian population, is a matter of provincial concern. Before Confederation, the maritime colonies were separated from Ontario by French-speaking Quebec, and in each colony an educational system specially adapted to the local conditions had come into existence. When Confederation was under consideration, the protection of existing vested rights was the predominant consideration. As a result, Section 93 of the British North America Act, which embodies the Canadian constitution in so far as that constitution is a written one, provides that in and for each province the Legislature may exclusively make laws in respect of education, except that "nothing in any such law shall prejudicially affect any right or privilege with respect to denominational schools which any class of persons have by law in the province at the union".

Inasmuch as the administration of public education is one of the chief functions of Provincial Governments, in each of the provinces except Quebec there is a Department of Education administered either by a member of the Provincial Executive Council or Cabinet or by the Executive Council or Cabinet as a whole. In practice, however, the routine administration is in the hands of the permanent officials of the Department of Education, who are members of the permanent civil service. In Quebec the Superintendent of Education, appointed by the Government, is *ex officio* President of the Council of Public Instruction. The link between the Department of Public Instruction and the Government is the Provincial Secretary; there are also two deputy heads, called the French and English Secretaries of the Department.

Since the Departments of Education are permanent authorities, controlled as to details of administration by permanent officials, educational policy is relatively permanent; further, the control of the Governments over education throughout the provinces is relatively stronger than in the United States. A capable Deputy Minister or Superintendent of Education impresses his personality and his views upon the whole system of his province, especially as in practice he controls the payment of government grants, which constitute, on the average, about 14 p.c. of the total expenditure applied to educational purposes.

The Department of Education in each province naturally has its headquarters at the capital of the province. Its local representatives are the school inspectors, who are appointed and paid by the Provincial Governments, except for the "public" and "separate" schools in Ontario, where they are appointed (in all but unorganized districts) by the county or city municipality from a list approved by the province.

Education in Quebec.—In Quebec there are two distinct systems of education —the Roman Catholic and the Protestant systems—in each of which the teaching of religion takes a prominent position. In the latter, which is under the control

*Revised by M. C. MacLean, M.A., F.S.S., Chief, Education Statistics Branch, Dominion Bureau of Statistics. This Branch is concerned with compiling and publishing comparable data relating to educational institutions throughout Canada, and to this end co-operates with the Provincial Departments of Education. A list of the publications of this Branch will be found in Chapter XXIX, Section 1, under "Education".

of the Protestant Committee of the Council of Public Instruction, with an English Secretary, the curriculum and the general system of education are similar to those in the other provinces, except that the highest grade is Grade XI, from which students are matriculated to McGill University and Bishop's University, the two Protestant English-speaking universities of the province.

In the Roman Catholic schools, which are mainly French-speaking, as the Protestant schools are English-speaking, the administration is in the hands of the Catholic Committee of the Council of Public Instruction, with a French Secretary. General elementary and continuation or "complementary" training is given by means of a curriculum, extending over one preparatory "year", six "years" of an elementary course, and two "years" of a complementary course. Some of these "years" require more than a year to complete, the completion of the "sixth year" corresponding in a general way to the end of the elementary grades, or high school entrance, in other provinces. Beginning in the school year 1929-30, a new superior course of three "years" beyond the complementary course was provided for. These are called the ninth, tenth and eleventh "years". Over 4,400 students were enrolled in the second year of introduction of the change.

Summary Statistics of Education.—Expenditure for schools, colleges and universities dropped from the peak of $178,700,000 in 1931 to $163,945,000 in 1932. The corresponding figures for the school year ended in 1933 shows a still greater drop, to $146,922,000. The decline continued in 1934. Though its exact extent is not yet known, available data indicate that the total for 1934 was probably not above $130,000,000. Up to 1933 the percentage drop was much greater in Ontario and the western provinces than in Quebec and the Maritimes. Capital expenditures have generally been brought to a very low level, and teachers' salaries, in the provinces for which 1934 records have been received, show a three-year decrease of about one-third. Reductions have been much more severe in rural schools than in towns and cities. A shortage of funds has led some communities to shorten the teaching year by a few weeks, but very few schools have been continuously closed for any considerable time. A concise numerical summary of institutions, pupils, teachers and costs for the school year ended in 1933 follows:—

GENERAL SUMMARY STATEMENT OF EDUCATIONAL INSTITUTIONS, STAFFS AND EXPENDITURES, 1933.

Type of Institution.	Institutions.	Pupils.	Teachers.	Expenditure.
	No.	No.	No.	$
(1) Provincially-Controlled Schools—

[1] Figures for 1 (a) and 1 (b) in Quebec are for 1931-32; for 1 (a) in Ont., except secondary schools, are for calendar year 1932; all others are for 1932-33.

[2] Includes 176 in Yukon in 1 (a) and, for Yukon and N.W.T., 411 in Item 3, 14,000 in population and $45,466 in expenditures.

[3] Schools for the blind, deaf, or mentally defective. These are boarding schools and many of the pupils are from a province other than the one in which they are at school. This is true, too, of industrial or reform schools in some provinces, with enrolments exceeding 3,000, which should properly be included under this heading.

Canada, by Provinces, 1933, or Latest Year Reported.[1]

[5] Includes also 2 (a) for Quebec.
[6] Estimated.

Subsection 1.—The Provincially-Controlled Schools.

It is considered that the best general test of the efficiency of public general education in Canada is furnished by the statistics of Table 2, showing the 1932-33 age-grade distribution of 1,457,026 pupils in the provincially-controlled schools of seven provinces. Many other tables of this form, analysing age-grade distribution by provinces, by sex, and by rural and urban areas and graded or ungraded schools, may be consulted in the Dominion Bureau of Statistics' "Annual Survey of Education in Canada, 1933", pp. 24-39.

[1] Kindergarten and Kindergarten-primary.

General elementary and secondary education throughout the Dominion, in so far as it is provincially-controlled, is carried on, except in Quebec, in free schools supported by general taxation. These schools may be divided into 12 grades, 8 of which are normally considered to be elementary and 4 secondary. The twelfth grade is in most provinces a postgraduate year, corresponding to the first year of a university course. The average pupil takes one school year to complete each grade, so that entering school at 6 years of age, he would matriculate to the university at 17 or 18.

A historical summary of the enrolment and average attendance in provincially-controlled schools from 1911 to 1933 is given by provinces in Table **3.** The enrolment and average attendance, in cities of 10,000 population and over, are given in Table **4.**

3.—Historical Summary of Enrolment and Average Attendance in Schools in Canada, by Provinces, 1911-33.

TOTAL NUMBERS ENROLLED, 1911-33.

NOTE.—Figures of enrolment and average attendance in various years prior to 1911 are given on pp. 839 and 840 of the 1932 Year Book.

[1]Figures revised since publication of the 1933 Year Book. [2]Half-year only. [3]Figures for Quebec and Ontario for 1933 not available at time of going to press.

4.—Numbers of Pupils Enrolled and in Average Attendance in All General Schools, and in High School Grades, in Cities of 10,000 or over, by Sex, 1933, or Latest Year Reported.

NOTE.—The high school enrolment in Quebec cities is not given because it would not be complete without including the high school pupils of the classical colleges and independent classical schools and of the normal schools. The figures for secondary grades for Ontario cities represent high schools, vocational schools, and collegiate institutes only; they do not include pupils in fifth classes.

Secondary Education.—In the past quarter of a century the number of pupils of both sexes doing work of secondary grade has shown a very great absolute increase as well as a large increase relative to the number in elementary grades. The available statistics are given by years in Table **5**, and show that in each of the provinces and in every year the number of girls in the secondary grades has exceeded the number of boys. The drop in the Ontario figures between 1915 and 1917 is due in part to the change in the statistical year from the calendar year to the natural school year—September to June.

5.—Provincially-Controlled Schools in Canada: Comparative Numbers of Boys and Girls Doing Work of Secondary Grade in each of Seven Provinces, 1911-33.[1]

NOTE.—For corresponding figures for 1901-10, see p. 974 of the 1933 Year Book. B=boys; G=girls.

[2]Figures revised since the publication of the 1933 Year Book.

Subjects of Instruction in Secondary Grades.—The subjects taken in the elementary grades of the provincially-controlled schools are settled by the curricula, but in the secondary grades there are usually options appealing to different types of pupils, wishing to follow different callings. Statistics of the subjects taken by pupils in secondary grades in 1930, available for six provinces, were presented in the Canada Year Book, 1932, p. 843, showing, among other things, the small number of pupils taking Greek and German and the high proportion studying French and Latin. The "Annual Survey of Education in Canada, 1933" shows in detail the changes in the subjects chosen in recent years by secondary grade pupils in the different provinces.

Vocational and Technical Education.—The introduction of technical and vocational courses into the high school curricula has been stimulated in recent years by the Technical Education Acts of 1919, 1929 and 1931, under the terms of which the Dominion Government undertook to provide subsidies to the provinces to encourage the growth of technical instruction. From the outset evening classes during the winter months have been an important part of the work of the technical schools. The numbers of students in institutions for technical education coming within the scope of the Technical Education Act of 1919 (9-10 Geo. V, c. 73) in the academic years ended June 30, were as follows: 1921, 56,774; 1922, 61,961; 1923, 70,300; 1924, 79,829; 1925, 88,024; 1926, 88,961; 1927, 96,682; 1928, 109,008; 1929, 121,252. In the years since 1929 not all provinces have been receiving grants, but Table 6 provides a record of pupils receiving instruction of a technical character in the provincially-controlled schools in 1933.

6.—Enrolment in Provincially-Controlled Vocational Schools in Canada, by Provinces, school year ended June 30, 1933.

Totals	**26,873**	**39,161**	**66,034**	**4,895**	**66,501**

[1]This table does not include students in commercial courses in Quebec who, it will be noted, constitute a numerous group in other provinces. In Quebec statistics they are included with the high schools, classical colleges, etc. Moreover, this table comes far short of demonstrating the full importance of technical or vocational training in Quebec for another reason. All the work in the Catholic schools in advance of the elementary years (*i.e.*, in the five complementary and superior years, including about 25,000 pupils) has a highly vocational character. Apart from certain compulsory general subjects in these years optional subjects are grouped in four vocational sections, in one of which each pupil studies. [2]Enrolment in Ontario schools is not for the full year but for a certain day—the last school day in May.

Teaching Staffs.—As shown in Table 1, the teaching staffs of Canadian schools consisted in 1933 of 73,241 teachers, 16,147 males and 57,094 females. The "Annual Survey of Education in Canada, 1933" deals in detail with the classification of these teachers, the rates of salary paid and the teaching experience. Table 7 summarizes statistics regarding rates of salary, as far as these are available.

Teachers in Training.—Detailed information regarding male and female teachers in training in 1932-33 is given in the Bureau of Statistics' "Annual Survey of Education in Canada, 1933". A summary of the number of teachers in training in each year from 1902 to 1933 is furnished by provinces in Table 8.

8.—Provincially-Controlled Schools in Canada: Number of Teachers in Training in Normal Schools and Colleges, by Provinces, 1911-33.

NOTE.—In recent years several universities have added teacher-training departments, in most cases for university graduates who are trained for teaching positions in the secondary schools. These are included in the figures since 1930. The large increase in Quebec in 1932 is due to the recognition of teaching brothers' scholasticates as normal schools for the first time; that in Ontario in 1933 is due to a second year of training being inaugurated. For corresponding figures for 1902-10, see. p. 976 of the 1933 Year Book.

[2]Figures do not include receipts.

[3]Including grants to provincial university as follows: 1925, $466,000; 1930, $606,825; 1931, $547,450; 1932, $408,175; 1933, $250,000.

Subsection 2.—Higher Education.

The tables of this subsection are intended to include all institutions in the Dominion offering instruction in courses that are the equivalent of at least two years in advance of matriculation. The affiliated colleges of each university are shown along with it, except where they are situated in another province. In the tables following, the name of each institution is given in the language (French or English) used therein as the main language of instruction. Table **10** gives a summary of the degrees and diplomas granted by the different universities and colleges of Canada, and Table **11** shows the students attending the faculties and courses of instruction offered in each institution.

Students of University Grade.—The aggregate number of students in attendance was reported as 85,133. Of these 41,175 were of university grade (*i.e.*, following courses for which matriculation was prerequisite) and 34,033 were in attendance at the regular sessions. They were enrolled in 153 different colleges or universities. Of those attending the full sessions 32,217 were undergraduates, while 1,779 were graduate students, *i.e.*, working toward a higher degree in a subject in which they already held a bachelor degree. Many of the large numbers classed as undergraduates actually held degrees, but not in the subject or faculty in which they were studying during the session under consideration.

More than half of all undergraduate students, or 17,179, are in arts and pure science or what are termed "academic" courses as distinguished from "professional" courses. One or two years of arts is prerequisite to many of the professional courses—in French-language Quebec the full four years. Next to arts and science come engineering and applied science with 3,703 students; medicine, 3,009; theology, 1,832; agriculture, 1,406; education, 975; law, 902; commerce and accounting, 680; household science, 647; pharmacy, 475; dentistry, 367; public health and nursing, 280; veterinary science, 177; music, 120; forestry, 112; architecture, 157; etc.

As shown in Table **10**, there were 3,954 bachelor degrees granted to men and 1,435 to women, 602 diplomas to men and 647 to women. Some of the latter represent completion of courses similar to those for bachelor degrees; after making due allowance for these and for duplication in cases where the same person may be receiving a second bachelor degree in a different branch of study, it may be concluded that there are, each year, about 3,700 new male and 1,400 new female university graduates with a bachelor degree or higher. The graduate degrees granted included 480 master degrees or licences to men and 116 to women, the term "licentiate" being used by the universities of Laval and Montreal in place of the term "master". Those completing the doctorate were 85 men and 8 women; while honorary doctor degrees were conferred on 85 men.

[1] All degrees except those in theology granted by Dalhousie.
[2] All degrees except those in theology entered opposite Toronto.
[3] Medical, dental and veterinary doctors included in "bachelor" column.
[4] The licence in the French-speaking universities is the next degree in advance of bachelor, as the master degree is in the English-speaking.
[5] Eighty-five of the doctor degrees were honorary.

Students not of University Grade.—The 41,175 students of post-matriculation standard represent little more than half of the total enrolment in universities and colleges. Many of the arts colleges, especially the classical colleges of Quebec, offer preparatory courses in which instruction is given in the high school grades, or even elementary grades. These accounted for 21,701 students, practically all of whom were in regular attendance at the full session.

The remaining 22,263 of the enrolment, 12,884 men and 9,379 women, were not following high school courses, but could not be classed as university-grade students as they had not necessarily matriculated. A minority of them attended the full session, generally studying music, household science or agriculture. The remainder were the students of summer courses in teaching methods, series of evening extension lectures, correspondence and other extra-mural courses, agricultural and other short courses.

Apart from the reported enrolment many thousands of people were reached by extension lectures that were not grouped in series and reported as courses, and still larger numbers reached by university radio broadcasts, travelling libraries, agricultural assistance and various other forms of extension service. These activities were reviewed in the "Annual Survey of Education in Canada, 1929".

Teaching Staff.—At pp. 858 to 861 of the 1932 Year Book there was published an analysis of the teaching staffs of universities and colleges as in 1929-30, by sex and by full time or part time. A corresponding table for 1932-33 will be found at p. 106 of the "Annual Survey of Education in Canada, 1933".

[1] Includes the arts students of Victoria, Trinity, St. Michael's, and students of the College of Pharmacy.
[2] The complete full-time enrolment in agriculture, including diploma and degree courses, is 793, household science, 381.
[3] Includes students of Manitoba Law School, and 710 in arts also registered in affiliated arts colleges.
[4] Included in Arts.
[5] To this figure should be added 50 students in the architecture section of the Ecoles des beaux Arts in Montreal and Quebec.

Financial Statistics.—Current expenditures were reported at $17,722,000 in 1933, while they were $18,743,000 in 1932, and $20,079,000 in 1931. Capital expenditure, which had averaged nearly $4,000,000 per year in the preceding three years, was reported at $830,000 in 1933.

From the standpoint of financial support, there are at least three classes of institutions. First, there are those that rely on grants from provincial treasuries for their upkeep; six of the provinces have such universities and the remaining three have colleges in this class. Secondly, there are the institutions such as Dalhousie, McGill and McMaster Universities, to cite a few, that rely for their support on

of the Regular Session, by Faculties, 1932-33—concluded.

[6] Excluding 3,698 duplicates in undergraduate arts.
[7] Included with Engineering.
[8] These students were reported by Dalhousie with which university the Maritime College of Pharmacy is affiliated.
[9] No reports received, although the main statistics will be included with the university to which the college is affiliated.

endowments, and do not receive provincial grants. Thirdly, there are colleges either operated or controlled by religious denominations and not receiving provincial assistance; these may not have a financial endowment sufficient to carry them. These may have another type of endowment—in men, so to speak, like the University of Ottawa and other Roman Catholic colleges conducted by religious orders. Since salaries are commonly only nominal in these schools, expenses are comparatively low per pupil accommodated. The other section of the third group—mainly Protestant theological and arts colleges—commonly rely on church contributions where their financial endowments are inadequate.

12.—Universities and Colleges of Canada:

NOTE.—When using the bold face provincial and grand totals, the foot-

Section 2.- Scientific and Industrial Research in Canada.

This section has, in past years, dealt with the history of scientific and industrial research in Canada and has included subsections outlining the organization and work of the National Research Council and of those provincial councils and private institutions which are primarily interested in research work. During the past year, the operations of these organizations continued to be conducted along the lines described in previous issues of the Year Book, and to conserve space the section is not reprinted in this edition. The reader is referred in this connection to pp. 866 to 872 of the 1932 Year Book.

An important event in the history of scientific research in Canada was the opening of the new building of the National Research Council on Aug. 10, 1932.

Section 3.—The Libraries of Canada.*

It is more than three and a quarter centuries since the first known library came to what is now the Dominion of Canada—the library brought by Marc Lescarbot to Port Royal in 1606. A library was connected with Laval College at its establishment in 1663, although it was many years later before this institution became important. During the next century record is found of several libraries in Quebec city; one of these, a Jesuit library mentioned by Peter Kalm, the Swedish traveller (its existence is recorded again in 1789), was afterwards sold to the *Quebec Gazette* and again sold in 1851 to the Library of Parliament. The volumes, which have survived the ravages of time and two fires, may still be found on Parliament Hill at Ottawa. Two other libraries founded in Quebec in the 18th century were a subscription library established in 1779 and the Quebec Legislative Library established in 1792. Four years later a public library was opened in Montreal. The Legislative Library of Upper Canada was established in 1791. The Legislative Library of Prince Edward Island is somewhat older, as it was founded in 1773. The King's College Library, located until recently at Windsor, Nova Scotia, and now at Halifax, dates from 1800, the year of the founding of the oldest existing public library in the Dominion, the library at Niagara. During the first quarter of the 19th century there were several libraries founded in Nova Scotia, several in Montreal, and at least one in Western Canada.

In the first quarter of the 20th century there was much activity in the establishment of libraries for public use. Of the 1,110 existing Canadian libraries for which statistics have been secured, 256 are known to have been established during that period, without regard to the fact that the dates of founding have not been secured for all libraries and the certainty that for one reason or another some libraries have not survived.

Public Libraries.—Public libraries, to the number of 637 in 1933, report a circulation of 22,126,000 books, exclusive of the loans for reading-room or reference-room use. These figures do not include "travelling libraries", "open-shelf libraries", the Carnegie district demonstrations in the Fraser Valley of British Columbia and in Prince Edward Island, or the county libraries of the Nova Scotia Department of Education. The public libraries as at present conducted are primarily urban institutions; the total urban population of Canada in 1931 was 5,572,058, while the population in centres served by the 637 libraries was about 4,424,000. Only in

*The latest biennial Survey of Libraries in Canada is for 1933 and may be obtained on application to the Dominion Statistician.

Ontario and British Columbia do the numbers served approximate the total urban populations. The number of borrowers registered at the end of 1933 was 1,101,000, about 25 p.c. of the population in communities served, just over 10 p.c. of the total Canadian population in 1931, or 13·5 p.c. of those over ten years of age.

13.—Summary Statistics of Public Libraries, by Provinces, 1933, with totals for 1931.

Province.	Libraries.	Volumes.	Circulation.	Borrowers registered at end of year.	Expenditure on Books and Periodicals.
	No.	No.	No.	No.	$

British Columbia	31	240,808	1,807,757	94,103	32,239
Yukon	3	13,928	10,889	259	811
Canada, 1933	**637**	**4,759,981**	**22,126,340**	**1,100,923**	**421,142**
Canada, 1931	**622**	**4,499,712**	**20,904,924**	–	**509,322**

University, College and Professional School Libraries.—In 1933 this group included 232 libraries in advanced educational institutions having a full-time enrolment of 64,500 students and a teaching staff of about 7,000. The total contents of these libraries were 3,856,713 volumes and 398,000 pamphlets. The two largest of these libraries were those of McGill University with 455,000 volumes and the University of Toronto with 290,000 volumes.

Business, Technical Society and Government Libraries.—These included 149 libraries with about 2,210,000 volumes and 497,000 pamphlets. Nine of the ten largest (over 50,000 volumes) were Dominion or Provincial Government libraries. The largest was the Library of Parliament in Ottawa, reporting 365,000 volumes and 65,000 pamphlets. British Columbia reported the largest legislative library among the provinces, with 200,000 volumes and 100,000 pamphlets.

Library Schools.—Schools for the training of librarians exist at McGill University and at the University of Toronto. The former gives a short six weeks course of training as well as a degree course giving the degree of Bachelor of Library Science after a one-year course to those who have already a bachelor degree. The latter offers a one-year course in library training, the minimum requirement for admission to the course being honour matriculation. Acadia University and the University of Western Ontario give two courses in library science which may be taken for the degree of Bachelor of Arts. In the latter, one of the courses is prescribed for all first-year students.

Section 4.—Art in Canada.

An article entitled "The Development of the Fine Arts in Canada", contributed by Newton MacTavish, M.A., D. Litt., appeared at pp. 995-1009 of the 1931 Year Book and a shorter article, dealing more particularly with the National Art Gallery at pp. 886-888 of the 1924 Year Book.

CHAPTER XXVI.—PUBLIC HEALTH AND BENEVOLENCE.

The rapid increase in the numbers committed to our various institutions, such as mental hospitals for the insane, feeble-minded and epileptic; the alleged increase in juvenile crime and the extension of social work in this field; the increasing number of institutions caring for the aged and incurable, as well as for dependent, neglected and handicapped children, have been marked features of the twentieth century. In this new and important field statistical data are collected and results analysed and published in leading countries. Although the difficulties encountered in building up statistics with a uniform application have been many, these statistics are now being collected on a Dominion-wide basis either at the decennial census or by annual returns.

In any comprehensive study of the situation it is essential that, besides health and hospitalization records, social statistics should also receive attention. Statistics regarding the number of children placed in foster homes, free family homes, number of children adopted, number of children cared for in day nurseries, institutional care of juvenile delinquents, numbers of dependent, neglected and handicapped children receiving institutional care, as well as fuller and more accurate data concerning inmates in our mental institutions, institutions for the feeble-minded, county asylums, county almshouses, poorhouses, etc., are becoming absolutely necessary to the proper drafting of social legislation and in order to deal with the problems of civilization, growing more complex day by day.

As public and private charity work together for the amelioration of conditions among the dependent and neglected, the proper treatment of defectives and the reclamation of the delinquent, the problem is made more difficult of statistical measurement, although the tendency to-day in most parts of Canada is to remove the responsibility of social work from the shoulders of individuals and private agencies and to regard it as more in the nature of a public responsibility. The growth in recent years of cordial relationships between governmental bodies and social welfare workers in the fields of school care and child welfare movements is manifested in the number of child welfare Acts in force in the various provinces of Canada.

Section 1.—Administration.

In Canada, speaking generally, the administration of public health activities and the establishment and maintenance of institutions is in the hands of the Provincial Governments, under the powers given them in Sec. 92 of the B.N.A. Act, 1867. Under their control, municipalities, societies and individuals generally initiate charitable and humane efforts, depending on the Government to some extent for financial aid and for competent uniform inspection of methods and standards. Apart, however, from the actual organization of provincial health departments and of the administrative bodies charged with the management of hospitals and other such institutions, particular attention is given to the same branches of public health work in all the provinces. Important, and reflecting most clearly the benefits accruing from such work, are the provisions for medical inspection of school children. These are carried out in some cases by the district or sub-district medical health officers, and in others by public health nurses whose activities are confined to this

work alone. In addition to the continual supervision exercised over the health of the children, expert advice and assistance are supplied freely to children, teachers and parents. In many cases dental inspection is provided for. While this work has been carried on upon a considerable scale for only a few years, great benefits have already resulted from it, notably general improvement in health and sanitary conditions and in the control and prevention of epidemics.

Exercising particular jurisdiction over some phases of the general health of the people of the Dominion is the Department of Health of the Dominion Government, while the Dominion Council of Health acts as a clearing house on many important questions related to the health of the people. This Council consists of the Deputy Minister of the Dominion Department of Pensions and National Health as chairman, the chief executive officer of the provincial department or board of health of each province, together with such other persons, not exceeding five, as may be appointed by the Governor in Council to hold office for three years. Of these appointed members, four have in the past represented agriculture, labour, rural women's work and social service, and child welfare, while the fifth member is a scientific adviser on public health matters. (A fuller description of this Council will be found at pp. 908-909 of the 1926 Year Book.)

The public health activities of the Dominion Government were described at pp. 876-879 of the 1932 Year Book, and those of the various Provincial Governments at pp. 879-883 of the same volume. For a brief description of the organization and activities of the Red Cross Society and of the Victorian Order of Nurses, readers may refer to p. 923 of the Year Book for 1922-23. Finally, a statement regarding Mothers' Allowances showing the scales of payments and the methods of administration was published at pp. 935-936 of the 1925 Year Book.

Section 2.—Institutional Statistics.*

The most familiar of all the public institutions established to administer and foster the general health of the community is the general hospital common to all cities and towns of any considerable population, and found also in the more prosperous rural districts. Such hospitals are generally erected and supported by the municipality, their actual administration being in the hands of a board of trustees; their revenue, in addition to that provided by the municipality, is derived in the main from grants from the Provincial Governments, from donations of individuals and societies, and from patients fees. Admission and treatment are free to all deserving persons who apply for them and whose resources are so limited as to prevent their otherwise receiving proper medical attention, while it is more or less generally expected of others that payments for services shall be made in proportion to costs and the ability of patients to defray them. Second in importance are the houses of refuge and orphanages—homes where destitute adults and homeless children are taken in, fed and clothed until they can support themselves or until homes are found for them elsewhere. Orphans' homes are found in practically every urban and rural community of any size, while refuges or homes for the aged are supported by the larger centres and by county municipalities. Asylums for the insane, also found in all the provinces, differ from the foregoing types in that they are in general owned, supported and administered entirely by the provinces. In Nova Scotia, however, the insane of each county, together with the inmates of the refuges and orphanages, are in most instances cared for in one institution.

*This section has been revised by J. C. Brady, Official in Charge of Census of Institutions, Dominion Bureau of Statistics.

Other institutions supported by the public include: isolation hospitals, maternity hospitals, homes for the deaf, dumb and blind, homes for incurables, infirmaries, homes for epileptics, lazarettos for lepers and tuberculosis sanatoria.

Throughout the Dominion many other more or less similar institutions exist whose nature is more independent than that of the types mentioned above. These institutions do not receive Provincial Government grants and are not in all cases subject to inspection.

Under authority granted by the Dominion Government in 1930, the Dominion Bureau of Statistics, through its newly created branch of Census of Institutions, now collects annual statistics for all hospitals in Canada, including mental institutions and homes for incurables.

Subsection 1.—Hospitals, other than Mental.

The great majority of hospitals are public hospitals which are either under municipal control or under private boards of management. These hospitals are assisted in their care of indigent patients by municipal and provincial grants. In addition there are: private hospitals which do not receive public grants; hospitals conducted by various religious orders; convalescent hospitals; hospitals for incurables; tuberculosis sanatoria; Red Cross hospitals and out-posts; special hospitals; lazarettos for the segregation and treatment of persons afflicted with leprosy; and hospitals for the treatment of mental and nervous diseases which are, generally speaking, maintained by the provinces. The care of persons suffering from communicable diseases is the responsibility of the various municipalities.

There are also a limited number of hospitals under Dominion Government administration, *e.g.*, those in connection with ex-service men, military forces, marine, quarantine and immigration.

The modern hospital is at once a battlefield between life and death, an institution for the practice of medicine and surgery and, viewed broadly, a financial enterprise which exceeds in magnitude many nation-wide industries. There has been a remarkable growth of public interest in the work of our hospitals in recent years, and hospital statistics have become a necessity to the study of certain branches of present-day social economics.

The total number of various hospitals, other than mental hospitals, in operation in Canada during 1932 was 860, divided into three main groups, namely: public, private and those operated by the Dominion Government. The public hospitals numbered 611, made up of 460 general, 21 women's, 10 pædiatric, 3 orthopædic, 14 isolation, 6 convalescent, 34 Red Cross, 40 tuberculosis, 22 incurable* and 1 special. Private hospitals numbered 214. The 35 hospitals operated by the Dominion Government were made up of: 8 for war veterans, 7 quarantine and immigration, 2 marine and 2 leper hospitals under the direction of the Department of Pensions and National Health; 9 military hospitals under the Department of National Defence; and 7 hospitals for Indians under the Department of Indian Affairs.†

During the year 1933, the total number of operating hospitals was 874, an increase of 14, classified as follows: public hospitals 605, a decrease of 6, (457 were general, 20 women's, 10 pædiatric, 3 orthopædic, 14 isolation, 6 convalescent, 34 tuberculosis, 36 Red Cross, 23 incurable,* and 2 special); private hospitals numbered 238, an increase of 24; Dominion hospitals, 31 in number, (8 for war veterans, 4 quarantine and immigration, 1 marine and 2 leper under the Department of Pensions

*Figures for hospitals for incurables for 1932, are shown separately in Table 7, but are included among other public hospitals for the year 1933 in Tables **1, 2** and **3.**

†A complete list of all hospitals in Canada giving name, location, type, bed accommodation, etc., will be found in the new Hospital Directory for Canada, 1932, issued by the Dominion Bureau of Statistics.

and National Health; 9 military under the Department of National Defence and 7 under the Department of Indian Affairs). There were 3 quarantine and immigration and 1 marine hospitals closed during the year.*

Summary statistics of the hospitals of the Dominion, other than mental hospitals, are presented for the years 1932 and 1933 in Table 1, while bed capacities of the hospitals in each province are given in Table 2, and detailed statistics of staff and patients, receipts and expenditures are shown by provinces in Table 3.

[1] 1933 figures subject to revision. [2] Exclusive of hospitals for incurables. [3] Including hospitals for incurables. [4] In days.

The total hospital receipts for 1932, of the hospitals included in the above table were $39,534,801, of which $35,063,238 was classified as maintenance receipts, including government and municipal grants amounting to $16,659,550, patients fees amounting to $14,994,930 and receipts from other sources, $3,408,758.

Expenditures for these hospitals, including those for maintenance and improvement, amounted to $45,297,312 in 1932, of which $37,228,757 was classified as expenditures for maintenance. These figures included salaries and wages $15,650,912, provisions $6,959,098, fuel, power, light and water $3,556,535, and other expenditures for maintenance $11,062,212.†

*See footnote†, page 1068.

†Financial statistics for hospitals were not collected for 1933 pending the report of the financial committee on hospital accounting.

[1] See preceding statements for each province, for numbers of hospitals included. [2] Figures given include Dominion hospitals in Nova Scotia and Quebec only. [3] Operating costs borne by Dominion Government. [4] No financial statistics collected in 1933.

Out-Patient Departments.—Out-patient departments as here reported include those institutions where medical or surgical treatment may be obtained either gratuitously or for a nominal fee, but which do not receive resident patients.

Out-patient departments, or clinics, are operated independently or in connection with a hospital, medical college, university or other institution. The dispensary or clinic in connection with a hospital is generally the out-patient department of the hospital and treats patients who do not occupy beds in the hospital. Sometimes, however, the out-patient department is distinct from the hospital proper and is a separate institution with its own staff, etc. The extension of out-patient services to patients of modest means has far-reaching and beneficial effects. It may replace admission to a hospital, or may serve to secure necessary and beneficial hospitalization. As a general rule, out-patient departments are subsidized from the funds of the general hospital and separate records are not kept. Until a uniform system of accounting is adopted, it is not possible to give the average cost per patient.

[1]Includes 199,105 patients for whom no records of treatments were made.
[2]Includes 1,140,095 treatmeats for which patients treated were not recorded.
[3]No out-patient departments were reported for Prince Edward Island.
[4]Includes a number of patients not classified as either "pay" or "free".
[5]Includes a number of treatments not classified as "pay" or "free".

Subsection 2.—Mental Hospitals.

Census statistics regarding the number of insane and feeble-minded in Canada were first made in connection with the decennial census of 1871, and general data were collected under the heading: "people of unsound mind". The Census of 1911 gave the number of insane and feeble-minded persons in Canada as 13,355, and a report for that year showed 9,671 patients in mental institutions. In 1921 figures concerning the number of patients in mental hospitals gave the number of insane as 21,516. Very little reliance can be placed on the figures before 1921, as the information was collected for patients in provincial mental hospitals only and did not include a large number of insane and feeble-minded in other institutions.

The Census of Mental Institutions of Canada was made a special feature of the Decennial Census of 1931, seven special schedules being used in the survey. Special features of the census were: separate classification of first admissions from re-admissions; classification of resident patients with particular reference to mental diagnosis; collection of data *re* ex-service men; urban and rural data; paroles; administrative personnel; values and acreages of hospital plants, etc.

The total number of institutions caring for the insane in 1933 was 60, including 29 public hospitals for the insane, 6 private hospitals for mental and nervous diseases, 5 public hospitals for feeble-minded children, 16 county asylums, 2 Dominion hospitals and 2 psychiatric hospitals for the insane.

Of the above 60 institutions, 58 reported as to staff and patients, and 55 regarding their finances. Statistics of capacity, staff and finances are presented by provinces in Table 5, and statistics of the movement of patient population in Table 6.

Subsection 3.—Child-Caring Institutions, Refuges for Adults, Homes for Incurables, etc.*

Although homes for incurables supply maintenance, nursing, medical and surgical aid to persons suffering from chronic and incurable diseases, the nature of the services given is such as to call for a special tabulation. Many hospitals for incurables care not only for those suffering from incurable diseases but also for the aged and indigent, and some even take care of orphans of both sexes.

In the case of general hospitals the service given both on economic and humanitarian grounds is to restore the patient to working efficiency in the community as soon as possible. The hospital or home for incurables looks after the patient whose affliction is of a more or less permanent nature incapacitating him from any possibility of earning a living. The movement of population is necessarily slow, discharges being generally due to death. The class of care given differs from that given in general hospitals, owing to the fact that the inmates tend to become institutionalized and need the care of a physician less frequently.

Summarized statistics of the 22 homes and hospitals for incurables reporting for 1932 will be found in Table 7.

*For census material on child-caring institutions, day nurseries and refuges for adults, see 1932 Year Book, pp. 893-895.

CHAPTER XXVII.—JUDICIAL AND PENITENTIARY STATISTICS.*

Canadian Criminal Law and Procedure.—The system under which justice is administered in a State is never rigid. This is neither expedient nor indeed possible. The judicial system must grow and adapt itself to the requirements of the people, and the exact limits of the powers of the Dominion and provincial legislative bodies have required and will still require added definition by the courts.

The exclusive legislative authority of the Parliament of Canada extends to criminal law throughout the Dominion. This law is based on the common law of England, built up through the ages and consisting first of customs and usages and later of principles enunciated by generations of judges and introduced into Canada, as regards criminal law, by Royal Proclamation, 1763.

The judicial systems of the provinces as they exist to-day are based upon the British North America Act of 1867. Section 91 provides that "the exclusive legislative authority of the Parliament of Canada extends to...the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters". In each province (Sec. 92, ss. 14), the Legislature may exclusively make laws in relation to "the administration of justice in the province, including the constitution, maintenance and organization of provincial courts, both of civil and of criminal jurisdiction and including procedure in civil matters in those courts". The Parliament of Canada, may, however, (Sec. 101) establish any additional courts for the better administration of the laws of Canada.

It is frequently difficult to distinguish between "Law" and "Procedure". Procedure may be interpreted to relate simply to the organic working of the courts, but in a wider sense it may also affect the rights or alter the legal relations arising out of any given set of facts.

The mass of statutes resulting from the fact that, prior to Confederation, each province had its own criminal jurisprudence, caused great and increasing inconvenience. This led to the adoption of various consolidation Acts, the chief of which are the Criminal Law and Amendment Acts of 1869 and the Criminal Procedure Act of 1886. These Acts dealt exhaustively with procedure in respect of indictable and non-indictable offences, jurisdiction of justices of the peace, juvenile offenders, speedy trials, criminal law, schedules and forms, etc.

In the meantime various efforts had been made in England for the reduction of the criminal law of that country into the form of a code, culminating in a draft code, submitted to the Imperial House of Commons in 1880. The question then arose as to the desirability of codifying the Canadian law. Objections were raised that codification would arrest the development of the law and its gradual adaptation to the habits and wants of the community, and would substitute a fixed, inelastic system for one which possessed the power of adjustment to circumstances. But the advantages of a codification of the law of crimes were finally so manifest that

*Revised by H. M. Boyd, Acting Chief Statistician on Criminal Statistics, Dominion Bureau of Statistics. The fifty-eighth Annual Report of Statistics of Criminal and Other Offences, for the year ended Sept. 30, 1933, is obtainable on application, from the Dominion Bureau of Statistics.

a bill founded on the English draft code of 1880, Stephen's Digest of Criminal Law, Burbidge's Digest of the Canadian Criminal Law, and on the Canadian statutory law, and introduced by the then Minister of Justice, Sir John Thompson, passed both Houses and became law July 1, 1893.

Crimes were formerly divided into two main classes: felonies, and misdemeanours. A felony was a crime involving forfeiture of property and of civil rights. The code has abolished this distinction and has classified offences as indictable and non-indictable. The term "indictable" means an offence which is triable on an indictment, that is to say the legal process by which a bill of indictment is preferred to, and presented by, a grand jury. An indictment differs from an information which rests only on presentation by the prosecuting authority, and properly from a presentment, which is an accusation originating with the grand jury. The word is sometimes loosely used, however, to include an information or presentment or both. Many cases of indictable offences are proceeded with, without a formal indictment. Furthermore certain cases triable on indictment may also be disposed of summarily by a magistrate, according to the severity or circumstances of the cases.

Non-indictable offences include cases usually dealt with summarily by police magistrates under the Summary Convictions Act, and comprise breaches of municipal regulations and other minor offences.

According to the provisions of the code, indictable offences are triable by jury but, in cases other than those listed below, the accused is accorded the right of election whether he be tried by jury, or before a judge without the intervention of a jury under the Speedy Trials Act, or before a magistrate under the Summary Trials Act. The jurisdiction of the magistrate is absolute, however, in certain cases and does not depend on the consent of the accused. Cases triable by jury without the consent of the accused are: treason, treasonable offences, assaults on the King, mutiny, unlawfully obtaining and communicating official information, taking of oath to commit certain crimes, seditious offences, libels on foreign sovereigns, piracy, corruption of officers employed in prosecuting offenders, frauds on the Government, breach of trust of public officers, municipal corruption, selling of appointments to any office, murder, attempt to murder, conspiracy to murder, accessory after the fact to murder, manslaughter, rape, attempt to commit rape, defamatory libel, combination in restraint of trade, for conspiring or attempting to commit, or being accessory after the fact to any of the above offences, also for bribery or undue influence, personation or other corrupt practice under the Dominion Elections Act. Also, where an offence is punishable with imprisonment for a period exceeding five years the Attorney General may require the charge to be tried by a jury.

In the province of Quebec a district magistrate has powers extending beyond those of a magistrate in any other province. He has the same jurisdiction as a county court judge in Ontario, and disposes of cases under the Speedy Trials Act, whereas the jurisdiction of the magistrates of other provinces extends only to the Summary Convictions Act and the Summary Trials Act.

Capital cases for the first twelve or fifteen years after Confederation included, besides murders, death sentences for attempts at murder, piracy, burglary, violation of females and levying war. The list of capital offences is now: levying war, murder,

piracy in cases of violence, rape, and treason. This is a drastic modification in the code from that which obtained a century and a half ago. In 1764, according to Blackstone, there were in England 160 capital offences on the Statute Book. It is stated that there was a strong feeling against the accompanying wholesale hangings and that judges and juries resorted to all sorts of subterfuges to evade the letter of the law. The work of practical reform and modification was slow, however, owing to the opposition of the House of Lords, but the days of the indiscriminating infliction of capital punishment ended with the passage of the Reform Bill in 1832, at which time forty kinds of forgery and many less serious offences were still capital crimes.

The statistics presented in the tables that follow, which are summarized from the Annual Report of Statistics of Criminal and Other Offences, are collected directly from the criminal courts in the different judicial districts throughout the Dominion. There are 154 judicial districts, including 4 sub-districts, divided as to provinces as follows: Prince Edward Island 3, Nova Scotia 18, New Brunswick 15, Quebec 23, Ontario 47, Manitoba 6, Saskatchewan 19, Alberta 14, British Columbia 8 and Yukon 1. The figures for the Northwest Territories are obtained from the reports of the Royal Canadian Mounted Police.

Section 1.—General Tables.

The statistics relate to years ended Sept. 30, the latest report being for 1933. Beginning with the report for 1922, an enlargement of the classification of offences has been adopted, by which offences of juvenile offenders are compiled separately from those of adults. The term "indictable" applies to offences of adults only, similar offences committed by juveniles being termed "major" offences; similarly, "non-indictable" offences of adults are termed "minor" offences when attributed to juveniles. All current tables have been worked out for 1922 and subsequent years in accordance with the new classification, but a comparative historical table, giving the totals for different classes of criminal offences and minor offences, *including those of juvenile delinquents*, is here published (Table **1**), together with a more detailed table for recent years (Table **2**). In the consideration of the former it should be remembered that, while the criminal code undergoes little change over periods of time, the figures of summary convictions are influenced very much by the changing customs of the people, and are apt to increase with the increasing urbanization of the population. The most significant column of Table **1** is the figure of criminal offences per 100,000 of population. Attention may be drawn to the increase in the proportion of both criminal offences and minor offences to population in recent years, convictions for criminal offences having risen from 284 per 100,000 population in 1921 to 402 in 1932 and 411 in 1933, and convictions for minor offences from 1,732 per 100,000 in 1921 to 2,842 in 1932 and 2,799 in 1933.

It should be understood that the classification of offences in these general tables is irrespective of the mode of procedure. That is to say, the "criminal" cases include many indictable offences disposed of summarily under the Summary Trials Act. Hence any addition of indictable and major and minor offences, as shown in other tables, will not agree with the figures given in Tables **1** and **2**. The object here is to show a broad historical record of criminal and minor offences respectively.

The recent trend of total convictions, including those of juveniles, and of sentences imposed, is shown by provinces for the years 1927 to 1933 in Table 3. Death sentences, which numbered 28 in 1919 and 26 in 1920, dropped to 12 in 1927, rose again to 26 in 1929, then dropped to 17 in 1930 and rose again to 25, 23 and 24 in the latest three years reported.

3.—Convictions and Sentences for All Offences, by Provinces, years ended Sept. 30, 1927-33.

Section 2.—Indictable Offences of Adults.

The progress of a community, from the moral point of view, is often judged by the number of convictions for indictable offences, as these are less affected than non-indictable offences by extraneous circumstances and the varying methods of law enforcement in different areas and in different years. However, in the

study of such statistics it is important to have comparable figures over a period of years, and these are set out by provinces for each year since 1911 in Table 4. Again, in Table 5 are shown the numbers of charges and convictions and the percentages of acquittals for the three years ended Sept. 30, 1931-33.

It may be stated that during the thirty-three-year period from 1900 to 1933 crimes increased from 4,853 to 32,942, or 579 p.c. The increase in the population during the same period was but 101·5 p.c., revealing that the increase in the crime rate was between five and six times that of the population.

4.—Convictions of Persons 16 years of Age and Upwards for Indictable Offences, by Provinces, years ended Sept. 30, 1911-33.

NOTE.—For figures for 1900-10, see p. 1016 of the 1933 Year Book.

Classes of Indictable Offences.—Indictable offences are divided under the Canadian system into six main classes, as follows: offences against the person, offences against property with violence, offences against property without violence, malicious offences against property, forgery and other offences against the currency, and other indictable offences. Details by offences are given in Table 6 and the details of the disposition of the charges in Table 7, which shows, with other information, that convictions of females numbered 3,477 in 1933 as against 3,202 in 1932 and 2,607 in 1931; as recently as 1924 the figure was only 1,826. Details as to occupation, conjugal condition, educational status, age, use of liquors, birthplace, religion and residence of those convicted of indictable offences are given in Table 8.

6.—Indictable Offences, by Classes, years ended Sept. 30, 1931-33.

NOTE.—The figures of this table do not include charges or convictions of juvenile delinquents.

[1]Notwithstanding the fact that the United Church of Canada was completely organized in 1926, these persons still reported themselves as Methodists.

Section 3.—Summary Convictions of Adults.

The following statistics relate to "non-indictable" offences committed by adults (persons 16 years of age and over) and disposed of by police magistrates or other justices of the peace, under authority of the Summary Convictions Act. Such convictions numbered 292,673 during the year ended Sept. 30, 1933, as com-

pared with 297,909 in 1932, 327,778 in 1931, 308,759 in 1930, and 193,240 in 1927. This marked increase in the past five or six years has been due almost entirely to breaches of traffic regulations, which have risen from 78,027 in 1926 to 186,848 in 1933, or from 46 p.c. to nearly 64 p.c. of the total of summary convictions. By sexes, the summary convictions appear as follows: in 1926, males 159,528, females 10,385; in 1930, males 292,557, females 16,202; in 1931, males 312,111, females 15,667; in 1932, males 281,318; females 16,591; and in 1933, males 275,229; females 17,444.

Summary convictions are given by provinces from 1911 to 1933 in Table **9**, and details of these offences are given for the four latest years in Table **10.**

9.—Summary Convictions, by Provinces, years ended Sept. 30, 1911-33.

NOTE.—For figures for 1900-1910, see p. 1020 of the 1933 Year Book.

Convictions for Drunkenness.—The number of summary convictions for drunkenness in Canada in 1933 was 18,910 as compared with 38,826 as recently as 1929. Maximum figures were attained in the years 1913 and 1914; during the War there was an appreciable reduction and since the War, while figures have fluctuated, they have not approximated former high levels. The decline in the last few years would appear to be at least partly due to the depression. Table **11** shows the number of convictions by provinces and years from 1911 to 1933.

11.—Convictions for Drunkenness, by Provinces, years ended Sept. 30, 1911-33.

NOTE.—For figures for 1900-1910, see p. 1021 of the 1933 Year Book.

Offences against the Liquor Acts.—Until the Great War, alcoholic liquors were generally sold under specified conditions by licensed hotels or licensed shops. Offences against the Liquor Acts usually represented a breach of the conditions of sale. During the War, prohibition was generally established but in more recent years the tendency has been for the Provincial Governments to take over the sale of liquor, to manage this sale through commissions and derive a revenue therefrom. Eight of the nine provinces now have their liquor commissions, Prince Edward Island being the only province in which prohibition prevails. In these circumstances, the convictions for offences against the Liquor Acts in 1929 reached the highest figure on record, *viz.*, 19,327, but have since fallen off to 10,489 in 1933. The number of such convictions in each year since 1911 is given by provinces in Table **12.**

12.—Convictions for Offences against the Liquor Acts, by Provinces, years ended Sept. 30, 1911-33.

NOTE.—For figures for the years 1900-1910, see p. 1022 of the 1933 Year Book.

Breaches of Traffic Regulations.—Convictions for breaches of traffic regulations (Table **13**), which at the beginning of the century numbered only 185 in all Canada have, as a result of the growing density and increasing speed of motor vehicles, become the largest element in the non-indictable offences. Such convictions reached a record total of 212,361 in 1931, when they represented 65 p.c. of the total of 327,778 (see Table **9**) summary convictions. Breaches of traffic regulations, numbering 186,848 in 1933, were 64 p.c. of all summary convictions in that year.

13.—Convictions for Breaches of Traffic Regulations, by Provinces, years ended Sept. 30, 1911-33.

NOTE.—For figures for the years 1900-10, see p. 1023 of the 1933 Year Book.

1933.....	82	628	693	72,464	91,521	11,021	1,859	3,282	5,298	–	–	186,848

The greatest percentage increases were recorded between 1908 and 1913. In this 5-year period total convictions increased from 1,270 to 16,000. For three years thereafter there was an abrupt decline, but beginning with 1917 another 5-year series of increases brought the total up to 51,788 in 1921; by 1924 the 60,000 mark had been reached, and recent years have witnessed a rapid increase to the high total of 212,361 in 1931, since when there has been a slight decline. The provincial distribution of the totals indicates that for the past five years Quebec shows the largest percentage of increase. Only Quebec and Alberta show increases for 1933 as compared with 1932, the remainder of the provinces showing decreases. For the year 1933, Ontario, which had 48 p.c. of the registrations of motor vehicles in Canada (see p. 738), had 49 p.c. of the total convictions; Quebec in the same year had 15 p.c. of the motor vehicles and 39 p.c. of the convictions; and Manitoba 6·3 p.c. of the motor vehicles and 5·9 p.c. of the convictions. In interpreting the figures in this way, however, it should be pointed out that traffic regulations are by no means uniform throughout Canada and no account is taken of the differences in the degrees of urbanization in the provinces. Thus, the above three provinces contain large centres of population, while in the Maritime Provinces, Saskatchewan and Alberta, with a lower degree of urbanization, convictions were low in proportion to the number of motor vehicles registered.

Section 4.—Juvenile Delinquency.

Juveniles under 16 years of age to the number of 7,453 were found guilty of various offences in the year ended Sept. 30, 1933, as compared with 7,363 in 1932, 7,768 in 1931, 8,425 in 1930, 7,826 in 1929, 7,699 in 1928, 8,185 in 1927 and 7,831 in 1926. Of the 1933 total, 5,144 were convicted of "major" offences and 2,309 of "minor" offences, terms which correspond very nearly to "indictable" and "non-indictable" offences, as applied to adults. The offences proven against juveniles in 1932 and 1933 are shown by provinces in Table **14.**

14.—Juvenile Delinquents Convicted of Major and Minor Offences, by Provinces and Sex, years ended Sept. 30, 1932 and 1933.

Province.	Major Offences.				Minor Offences.			
	Males.		Females.		Males.		Females.

Major Offences.—In Table **15** are shown the various major offences for which juvenile delinquents were convicted in 1927 to 1933. It will be observed that theft, house- and shop-breaking with theft, and other wilful damage to property account for the great bulk of the offences; in 1933, 93 p.c. of the major offences were of this character.

15.—Juvenile Delinquents Convicted of Major Offences, by Offences, years ended Sept. 30, 1927-33.

Offence.	1927.	1928.	1929.	1930.	1931.	1932.	1933.	Increase or Decrease in 1933.

Totals	**5,156**	**5,063**	**5,106**	**5,653**	**5,311**	**5,096**	**5,144**	**+48**

Minor Offences.—Of the 2,309 juvenile delinquents found guilty of minor offences in 1933, 358 were convicted of breaches of municipal by-laws, 139 of disorderly conduct and disturbing the peace, 498 of disobedience or incorrigibility, 373 of trespass, 203 of truancy, 78 of vagrancy and indecent language and 660 of other minor offences.

Section 5.—Police Statistics.

In 1933, 164 cities and towns, with populations of 4,000 or over, supplied police statistics to the Dominion Bureau of Statistics. These cities and towns, with an aggregate population of 4,438,810, had 5,087 policemen, who made 335,517 arrests and summonses. The total number of offences committed during the

year and made known to the police was 450,611, and the number of prosecutions was 308,504 or 68·5 p.c. of the known offences. Convictions secured in respect of these offences numbered 271,996, being 60·4 p.c. of the known offences and 88·2 p.c. of the prosecutions.

The number of automobiles reported stolen was 7,249, of which 7,185 were recovered. Of 13,495 bicycles stolen, 6,571 were recovered. The value of other lost articles reported to the police was $2,305,852, of which $1,008,959 or 44 p.c. was recovered.

16.—Police Statistics of Canadian Cities and Towns, by Provinces, years ended Sept. 30, 1932 and 1933.

Year and Province.	Cities and Towns.	Population.	Police.	Arrests.	Summonses.	Population per Policeman.	Arrests per Policeman.

Section 6.—Penitentiary Statistics.

The Penitentiaries Branch of the Department of Justice is charged with the administration of the various penitentiaries of Canada. Seven institutions are included in the system, the two largest of which are at Portsmouth, Ont., and St. Vincent de Paul, Que., while the other five are at Dorchester, N.B.; Prince Albert, Sask.; Stony Mountain, Man.; New Westminster (including Piers Island), B.C., and Collins Bay, Ont. During the fiscal year ended Mar. 31, 1934, the average daily population of these institutions was 4,358 and the total net expenditure for the year was $2,554,890 or $586 per capita, compared with 4,425 average daily population and $2,629,213 total net expenditure or $594 per capita for the year 1933.

The Piers Island Penitentiary, which is administered by the warden of the New Westminster institution, was provided in 1932 for the custody of members of the Doukhobor colony who were given three-year sentences. Those in custody at Piers Island Penitentiary on Mar. 31, 1933, numbered 570 and on Mar. 31, 1934, 531. The inclusion of this population in the general penitentiary statistics affects the comparability of the statistics of these years with those of former years. Details regarding the inmates at Piers Island are therefore given here, in order that, by deduction from the totals given in Tables **19** and **20**, particulars comparable

with those of former years may be obtained regarding the population of ordinary penitentiaries. The ages of those in custody at Piers Island were:

Fiscal Year.	Under 20.	20–30.	30–40.	40–50.	50–60.	Over 60.	Total.
1933	31	168	97	92	66	116	570
1934	29	153	90	88	63	108	531

These people were of Caucasian race and of the 570 inmates in 1933, 231 were born in Canada and the remaining 339 in Russia; in 1934, of 531 inmates, 231 were born in Canada and 300 in Russia. Particulars regarding their conjugal state and sex were as follows:

Fiscal Year.	Single.	Married.	Widowed.	Divorced.	Total.	Male.	Female.
1933	88	435	43	4	570	292	278
1934	78	409	40	4	531	264	267

They were all total abstainers and adherents of the Doukhobor creed.

With the exception of the large number of women among the Doukhobors confined at Piers Island, all female convicts are kept in the penitentiary at Portsmouth, a suburb of Kingston, where special quarters and staff are maintained for their detention and supervision. A new building for this purpose was completed and occupied during 1934. Female convicts in custody there on Mar. 31, 1934, numbered 46 compared with 48 in 1932 and 27 in 1925.

Tables **18–20** give the more important penitentiary statistics as reported by the Superintendent. The number of convicts in penitentiaries was 1,865 in 1910, rose to 2,118 in 1916 and declined to 1,468 in 1918. After demobilization and the depression of 1921, the number of convicts rose to 2,640 in 1922, declined to 2,225 in 1924 and then increased to 4,164 in 1932. The increase was particularly rapid after 1929, amounting to 1,395 or 44 p.c. in three years. Excluding the Doukhobors at Piers Island the number of convicts in 1934, at 3,689, was lower than in any of the three preceding years. The number of paroles, as shown in Table **18**, reached the high figure of 731 in 1934, including 16 from Piers Island.

Table **19** shows the ages of convicts by groups. If the Doukhobors confined at Piers Island be deducted from the groups in 1934, the remaining total of 3,689 includes 10·3 p.c. under 20 years of age and 47·8 p.c. between 20 and 30 years of age or 58·1 p.c. under 30. In 1914 there were 2,003 convicts of whom 9·3 p.c. were under 20 and 44·4 p.c. between 20 and 30, a total of 53·7 p.c. under 30. In 1923 there were 2,486 convicts and 11·3 p.c. were under 20, 46·6 p.c. between 20 and 30, or 57·9 p.c. under 30 years of age. The average age of convicts appears to be slightly younger since the War, but no definite trend is shown in the past decade, although there is a good deal of variation from year to year. Detailed statistics of the race, nationality by place of birth, conjugal state, sex and religion of convicts are presented in Table **20**.

Movement of Population of Penal Institutions.—Penal institutions may be classified under four heads: penitentiaries, with slow turnover, since prisoners have long sentences; reformatories for boys and reformatories for girls, also with rather slow turnovers, but more rapid in the case of boys than in that of girls; and lastly common gaols, where the turnover is extremely rapid. If the average population for the year be the average of the inmates at the beginning and end

of the year, and the number discharged be the turnover, the turnover in 1933 was: in penitentiaries, 44 p.c.; in reformatories for boys, 218 p.c.; in reformatories for girls, 92 p.c.; in gaols, no less than 1,287 p.c. Thus, the average time spent in gaol was about four weeks. In dealing with these figures it must be borne in mind that the common gaol population changes from day to day and is partly made up of accused persons awaiting trial who may be liberated to-day or sent to a penitentiary or reformatory to-morrow.

17.—Population of Penal Institutions, 1931-33.

NOTE.—Penitentiary statistics until 1919 were supplied directly by each penitentiary and were for the calendar year. For 1920 and subsequent years they have been supplied by the Superintendent of Penitentiaries and are for the fiscal years ended Mar. 31. For other institutions, the figures are for the years ended Sept. 30.

Penal Institutions.	In Custody, Beginning of Year.	Admitted during Year.	Discharged during Year.	In Custody, End of Year.
1931.[1]				
Penitentiaries	3,187	1,899	1,372	3,714

[1] All "coloured". [2] The unusually high figures for many items and the totals in 1933 and 1934 are due to the confinement of Doukhobors in the special penitentiary on Piers island, B.C. See pp. 1100-1101. [3]These persons returned themselves as "Methodist" in spite of the union with Presbyterians and Congregationalists to form the United Church of Canada in 1925.

CHAPTER XXVIII.—MISCELLANEOUS ADMINISTRATION.

Section 1.—Public Lands.

Table 1, pp. 1108–1110, summarizes the character and disposition of the land area of Canada. Since there are still large areas which have been little explored and a much larger area not surveyed, and therefore not classified with regard to its possibilities, many of the figures given are estimates, although every care has been taken to consult the most competent authorities, Dominion and provincial, in a position to make such estimates. The continued extension of exploration and surveys will enable the governmental authorities to classify more exactly the lands within their jurisdiction.

In this table the areas of occupied and abandoned farms and of farm woodlots are taken from the Census of 1931. The totals of the land area of the provinces and territories are the areas as revised by the Topographical Survey, Dominion Department of the Interior, and agree with those appearing in the table on p. 7 of this volume, while the areas of Indian reserves are those reported by the Department of Indian Affairs. For other items, figures supplied by the provinces have been used wherever available; otherwise estimates from Dominion Government sources, chiefly the Forest Service, have been substituted. Between the totals of existing and potential agricultural lands (Item 14) and the totals of forest lands (Item 22) there is, of course, duplication to the extent of the agricultural lands under forest (Item 9). In view of the various sources from which the information is drawn there is satisfactory agreement in the relationship of the items.

Subsection 1.—Dominion Public Lands.*

As stated on p. 1019 of the 1931 Year Book, the lands and natural resources lying within the boundaries of the provinces of Manitoba, Saskatchewan, Alberta and British Columbia, which had formerly been administered by the Dominion Government, were transferred to the administration of the provinces concerned at various dates in 1930.

Actual Dominion lands, therefore, now comprise: the Northwest Territories, including the Arctic islands and the islands in Hudson bay; Yukon; the National Park areas (see pp. 46-48), Indian reserves (see p. 1122), and historic sites in the different provinces throughout Canada; certain small and widely scattered parcels of Ordnance and Admiralty lands which have been held by the Dominion Government since Confederation and are rented, disposed of, or otherwise administered with

* Revised by J. Lorne Turner, Director, Lands, Northwest Territories and Yukon Branch, Department of the Interior.

a view to bringing as many properties as possible to a state of revenue production; and, finally, public lands, at one time alienated, but which have been re-vested in the Crown in the right of the Dominion for various reasons, and upon which public monies have been spent.

The great bulk of the land areas under Dominion administration are those of Yukon and the Northwest Territories, amounting to about 936,680,000 acres or 42 p.c. of the land surface of Canada. The southern border of both Yukon and the Northwest Territories is 60°N. latitude. In Europe, Oslo, Stockholm and Leningrad are near this line, while about three-fourths of Norway, two-thirds of Sweden, all of Finland and a large proportion of Russia are north of it. In Table **1** a distinction has been made between those Dominion lands which are still freely disposable by the Dominion Government, and those which have been set aside as National Parks, under the National Parks Acts, or as Indian reserves, by Treaty. The total Dominion lands can be easily obtained by adding Items 27, 28 and 29.

Interest in this northern part of the national domain has increased in the past decade and the administration of these lands was placed under a separate branch of the Dominion Government, the North West Territories and Yukon Branch of the Department of the Interior, until 1931, when, on the transfer of the natural resources of Manitoba, Saskatchewan, Alberta and of the Railway Belt and Peace River Block of British Columbia to the respective provincial administrations, it was vested in the Dominion Lands Administration, now the Lands, Northwest Territories and Yukon Branch of the Department of the Interior. The Royal Canadian Mounted Police maintain law and order throughout the Northwest Territories and Yukon. More detailed particulars of the administration of each territory follow:—

The Northwest Territories.—The government of the Northwest Territories is vested in a Commissioner, a Deputy Commissioner, and a Council of five members with Ottawa as the seat of Government. The administration is carried on by the Department of the Interior through the Lands, Northwest Territories and Yukon Branch. The Territories are subdivided for administrative purposes into the provisional districts of Mackenzie, Keewatin and Franklin. The district of Mackenzie is, as yet, the most widely known and developed, trading posts and settlements being located all along the great stretch of inland waterways known as the Mackenzie system. Fort Smith, the headquarters of the Mackenzie district, is located on the Slave river north of the rapids. From this point there is uninterrupted navigation to the Arctic ocean, a distance of 1,369 miles and along the Arctic coast as far east as King William island.

The Administration has provided for a medical and nursing service, grants to the Anglican and Roman Catholic missions for education and hospitals, an

excellent mail service in which river steamboats and aeroplanes co-operate, motor roads, and a system of radio stations linking up Fort Smith, Resolution, Simpson, Norman and Aklavik with Edmonton, Alberta, and with Dawson and Mayo, Yukon.

The Department of the Interior has set aside certain areas, totalling over 338,916,000 acres, as preserves wherein only the Indian and the Eskimo may hunt. Officers in the field have made investigations into the conditions affecting musk-ox, caribou, and other forms of wild life. The Wood-Buffalo Park in the vicinity of Fort Smith covers an area of 17,300 sq. miles; it has been specially preserved for the protection of the buffalo. The Thelon Game Sanctuary to the east of Great Slave lake is, in its turn, the home of musk-oxen and caribou.

Included in the Northwest Territories are the Arctic Prairies, which are capable of supplying pasturage to large numbers of reindeer and caribou. Following investigation, 2,370 head of reindeer have been imported from Alaska and established on a government reindeer reserve in the vicinity of Kittigazuit, east of the Mackenzie River delta, containing an area of approximately 6,000 square miles. Under the favourable conditions which exist there, everything points to a considerable increase in numbers of the herd. Indications are that this experiment will result in a plentiful meat supply in the future.

The introduction of wireless communication and the development of reception has been a great boon to the isolated posts in the Mackenzie district. It enables traders and trappers to keep in touch with outside markets, and furnishes the inhabitants generally with news of current events.

In view of the great increase in the use of aircraft for mail and general transportation, the Administration is undertaking the development of landing facilities throughout the Mackenzie district. A winter landing field has been partially conditioned at Fort Smith and it is expected that it will be completed during the present year. For summer landing, it is proposed to install floating docks and other conveniences at Fort Smith, Resolution, Rae, Simpson, Norman, Aklavik, and Cameron Bay.

Exploratory work has been carried on throughout the Territories and local surveys made in all districts. Mineral prospectors are following in the tracks of the explorers, the aeroplane being used as the chief means of transportation. The Laurentian Shield, which has proved so rich in valuable minerals in Eastern Canada is continued into the eastern half of the Territories—that portion lying between Great Slave and Great Bear lakes and Hudson bay—and valuable discoveries have been made in this area. The rich native silver and high-grade pitchblende ores discovered during the last few years east and south-east of Great Bear lake are now under development. The oil wells near Norman on the Mackenzie river have

been in active operation since 1932, the bulk of the oil produced being shipped to mining interests operating at the eastern end of Great Bear lake. The agricultural land of the Territories lies almost entirely in the extension of the central plain defined by the Mackenzie valley.

It is known that there are many possible water-power sites throughout the Territories; these will no doubt be developed as a consequence of mining enterprises. Much of the upper Mackenzie valley carries a forest cover, which furnishes timber and fuel for local needs. Fishing, agriculture, mining and lumbering are engaged in to some extent, but the principal industry of the Territories is still the taking and export of furs. Many trading posts operate throughout the regions tributary to the Arctic coast, Hudson bay, and the great inland systems of waterways.

Yukon.—The Yukon Territory is administered by the Lands, Northwest Territories and Yukon Branch of the Department of the Interior as in the case of the Northwest Territories. The Comptroller, resident at Dawson, is the executive head of a local elective government of three members termed the Yukon Council, with jurisdiction over local matters. The Comptroller acts on instructions from the Governor in Council or the Minister of the Interior. Hospitals, schools, motor roads, and other amenities of modern life have been provided and, in addition to the overland telegraph line, wireless stations at Dawson and Mayo link up with the outside world through the Northwest Territories and Edmonton.

The route ordinarily taken to enter Yukon is from Skagway, Alaska, on the south, thence by the White Pass and Yukon Railway to Whitehorse, and by river boat to Dawson.

The use of aircraft for transportation purposes is increasing and during 1934 landing fields were conditioned at Whitehorse, Dawson and Mayo, a temporary licence being issued for the first-mentioned field. Sites for fields have been selected at other settlements in the Territory and included in the works program for 1935.

Yukon has produced over $200,000,000 worth of gold since the Klondike rush, but the old placer claims, operated with cradle, pick and shovel, have given place to consolidated holdings worked with hydraulic dredges and other modern machinery. Silver, lead, copper, tungsten and coal are known to exist in paying quantities, and of late years the development of the silver-lead ores of the Mayo district has been one of the major factors in the growth of lode-mining enterprises. There is a hydro-electric installation of 13,200 h.p. in Yukon, but this is only a small proportion of the possible installation which will be developed as required.

Although fishing, agriculture (including fur-farming), and some lumbering are carried on as auxiliary industries, the future of Yukon is inevitably bound up with mining development.

brought up to date from the 1930 Year Book, p. 961. [3]Assumed to be the sum of occupied and abandoned farms and road alowances, except for the Prairie Provinces (see footnote 14). [4]Woodlots or forested areas

Footnotes concluded at foot of p. 1110.

Subsection 2.—Provincial Public Lands.

In the Maritime Provinces, in Quebec, Ontario and British Columbia (except the Railway Belt and the Peace River Block) the public lands have been administered by the Provincial Governments since Confederation. Owing to the transfer of the natural resources to the Prairie Provinces and British Columbia, as outlined in Chapter XXVII, p. 1019 of the 1931 Year Book, public lands in all provinces are now under provincial administration. In Prince Edward Island, all the land is alienated and there are no provincial public lands.

Information regarding the amounts of disposable public land and the terms on which areas may be secured was regularly given from year to year for each of the provinces in editions of the Canada Year Book prior to 1933. However, since the revisions since that time have been of a minor character and as there is a heavy pressure upon space, it has been decided to refer those interested in securing provincial public lands to pp. 921-927 of the 1932 Year Book, and to the following officials of the respective provinces: Minister of Lands and Forests, Halifax, N.S.; Deputy Minister of Lands and Mines, Fredericton, N.B.; Deputy Minister of Lands and Forests, Quebec, Que.; Minister of Lands and Forests, Parliament Bldgs. Toronto, Ont.; Director of Lands, Department of Mines and Natural Resources, Winnipeg, Man.; Director of Lands, Department of Natural Resources, Regina, Sask.; Publicity Commissioner, Edmonton, Alta.; Deputy Commissioner of Lands, Victoria, B.C.

---

of occupied farms as reported in the Census of 1931. [5]Figures from the Forest Service, Department of the Interior. [6]Other than any included in Item 6. [7]Does not include National and Provincial Parks. Undoubtedly there are limited areas of lands in the Dominion and Provincial Parks suited to certain branches of agriculture, such as grazing. Since, however, these areas have been dedicated to the public for recreational purposes, primarily because of their scenic resources, such potential agricultural lands as they contain are precluded from being diverted to such uses. [8]This item is an approximation got by subtracting the sum of Items 2, 5, 9, 10 and 11 from Item 14. [9]Estimated by the Topographical Survey, Department of the Interior. Where this figure differs from the totals of Items 25-31, inclusive, the provincial estimates for Items 25, 26, 30 or 31 are not in line with total area as estimated by the Topographical Survey. [10]Dominion lands or provincial lands under forest include forested areas in the Dominion National and Provincial Parks. [11]This item is the total productive and unproductive forest area, by provinces, as estimated by the Forest Service of the Department of the Interior and given in square miles on p. 319 of this volume. Indian Reserves are not included in Item 18, but are shown separately as Item 19. Apart from this exception, Items 18 and 20 include all Dominion and Provincial lands under forest (Crown lands, National Parks, Ordnance lands, Military lands, reserves, etc.). [12]These lands include rock, open muskeg, burnt-over lands which are not re-stocking, and lands above timber line. All such lands are by no means economically barren, since in many cases they are sources of valuable mineral wealth or as in large areas in the National Parks, they have often a distinct economic value resulting from their scenic resources. Figures have been estimated by subtracting from the total land area the sum of agricultural and forest lands less the duplication involved (Item 9). [13]This item includes lands in process of alienation where such are not reported under Item 26, also where the figures are not available from provincial sources it is estimated by adding forest and agricultural lands alienated and allowing for urban and other areas alienated (Item 23). [14]From the 1930 Year Book, p. 961. This total is not the sum of the Items 1, 4 and 5, because of alienated lands in the form of grants to railway companies, grants to the Hudson's Bay Co., school land endowment, adjustments to road allowances as per footnote 3, etc. [15]No estimate available. [16]Figures are obtained from provincial sources. [17]In Yukon and N.W.T. areas aggregating 338,916,000 acres have been set apart by Order in Council as game preserves and sanctuaries in which only native Indians and Eskimos may hunt, but have not been permanently dedicated to this purpose by Parliament and are not, therefore, regarded as parks. [18]For the provinces indicated only. [19]There is very little unproductive land in New Brunswick. [20]This total is not the addition of the column items because the figures, being obtained from the various sources shown do not tie-in with one another. [21]Including the Wood-Buffalo Park (which, though reserved by the Dominion, is not administered by the National Parks Branch) and the Tar Sands Reserve. [22]That portion of the Wood-Buffalo Park in the Northwest Territories. [23]This is the forested area in the National Parks as estimated by the National Parks Branch, Department of the Interior. [24]Includes also other lands alienated since the Census of 1931 or, in the case of the Prairie Provinces, since the time of the original estimate (see footnote 14). These figures are approximations calculated for each province by deducting the sum of Items 6 and 15 from the sum of Items 25 and 26. In the case of Quebec a negative acreage is indicated. This would seem to suggest that reversions to the Crown since 1931 have more than offset any areas under this head.

Section 2.—National Defence.*

Before the outbreak of the Great War, the Canadian Militia consisted of a Permanent Force, which on Mar. 31, 1914, numbered 3,000 officers, non-commissioned officers and men, and an Active Militia, which at the same date numbered 5,615 officers and 68,991 non-commissioned officers and men. After the outbreak of war on Aug. 4, 1914, successive contingents of troops of all arms were recruited, equipped, trained and dispatched by the Dominion Government to England for active service. When hostilities ceased on Nov. 11, 1918, there had been sent overseas, for active service in the Canadian Expeditionary Force, about 418,000 officers, non-commissioned officers and men.† In addition to these, several thousand Canadians served with the Royal Air Force.

Organization.—Prior to 1922, three departments of the Canadian Government were concerned with the defence of Canada, *viz.*, the Department of Militia and Defence, the Department of the Naval Service, and the Air Board.

During the Session of 1922, the National Defence Act was passed, consolidating the Department of Militia and Defence, the Department of the Naval Service and the Air Board into the Department of National Defence. This Act became effective by proclamation on Jan. 1, 1923. Under it, there is a Minister of National Defence and a Deputy Minister of National Defence. To advise the Minister, a Defence Council has been constituted by Order in Council, consisting of a President (the Minister), a Vice-President (the Deputy Minister), and the following members: the Chief of the General Staff and the Chief of the Naval Staff. The Adjutant-General, the Quartermaster-General and the Senior Air Officer, Royal Canadian Air Force, are associate members. There is also a Secretary of the Council.

Subsection 1.—The Naval Service.

The Naval Service of Canada was established by the Naval Service Act, 1910 (9-10 Edw. VII, c. 43), the main provisions of which were described in the 1910 Year Book, pp. xxvi-xxix.

The Department of Naval Service was amalgamated with the Department of Militia and Defence and the Canadian Air Board, to form the Department of National Defence, in 1922.

The Royal Canadian Navy and its Reserve Forces are under the direction of the Chief of the Naval Staff, who is a member of the Defence Council. The Service consists of:—

1. Royal Canadian Navy (permanent).
2. Royal Canadian Naval Reserve (non-permanent).
3. Royal Canadian Naval Volunteer Reserve (non-permanent).

Administrative and operational staff for all three Forces is provided from the Royal Canadian Navy.

The Royal Canadian Navy.—The Royal Canadian Navy has an authorized complement of 104 officers and 812 ratings. A large majority of the men of the R.C.N. are serving under 7-year engagements. A small proportion consists of specialist gunnery, torpedo, and engine-room ratings, lent from the Royal Navy (in December, 1934, this proportion amounted to 2 p.c.).

*Revised by H. W. Brown, Asst. Deputy Minister, Department of National Defence.

†For the detailed expenditures of the Dominion Government on account of war appropriations in the fiscal years 1915-21, see the Canada Year Book, 1921, p. 798.

A proportion of the officers of the Royal Canadian Navy serves periodically in ships of the Royal Navy, to acquire experience in capital ships, cruisers, etc., and training courses are arranged for selected officers at the instructional schools of the Royal Navy to qualify in war staff, gunnery, torpedo, wireless and other duties. Courses for selected men in the gunnery, torpedo, wireless telegraphy and mechanical training schools of the Royal Navy are similarly arranged.

The ships of the Royal Canadian Navy are:—

H.M.C.S. *Saguenay* (destroyer—in commission).
H.M.C.S. *Skeena* (destroyer—in commission).
H.M.C.S. *Champlain* (destroyer—in commission).
H.M.C.S. *Vancouver* (destroyer—in commission).
H.M.C.S. *Armentières* (minesweeper—in commission).
H.M.C.S. *Festubert* (minesweeper—in reserve).
H.M.C.S. *Ypres* (minesweeper—in reserve).

Naval training establishments, comprising: naval barracks; gunnery drill sheds, with all modern appliances for teaching gun-laying, sight-setting, etc.; torpedo and electrical schools; parade grounds; and other equipment are maintained at Halifax and Esquimalt. Naval dockyards, with work shops, etc., for refitting and supplying necessary stores to H.M.C. ships, are also maintained at Halifax and Esquimalt.

Royal Canadian Naval Reserve.—The establishment of the Royal Canadian Naval Reserve is 70 officers and 430 men recruited from among sea-faring personnel. Officers have been appointed to act as registrars at Halifax, Charlottetown, Quebec, Montreal, Vancouver.

Officers and men of the Royal Canadian Naval Reserve attend naval training at Halifax and Esquimalt for 42 days for the first year of enrolment and for 14 days annually or biennially thereafter. They are permitted to volunteer for service afloat up to a maximum of six months during each period of enrolment. The period of enrolment in the Royal Canadian Naval Reserve is five years.

Royal Canadian Naval Volunteer Reserve.—The establishment of the Royal Canadian Naval Volunteer Reserve is 70 officers and 930 men, distributed as follows: Halifax (half company); Saint John (half company); Charlottetown (half company); Quebec (half company); Montreal (company); Ottawa (half company); Toronto (company); Hamilton (half company); Winnipeg (company); Saskatoon (half company); Regina (half company); Edmonton (half company); Calgary (half company); Vancouver (half company); Prince Rupert (half company).

Each company or half company is under the immediate command of an officer of the R.C.N.V.R., appointed as company commanding officer. The company commanding officer is assisted by other commissioned officers of the Force.

A petty officer instructor (a highly qualified ex-petty officer of the Royal Navy or of the Royal Canadian Navy) is employed at each company headquarters to give instruction to men of the company in gunnery, torpedo practice, seamanship and other naval subjects.

Each officer and man of the R.C.N.V.R. performs annually a minimum of 30 drills, of a duration of not less than one hour each, at company headquarters. In actual practice 40 to 50 drills have been performed annually by each member of the

company. Officers and men also attend from two to three weeks naval training annually at the naval bases at Halifax or Esquimalt, or at sea in H.M.C. or H.M ships.

Officers and men who can obtain the necessary leave of absence are permitted to perform a maximum of four months voluntary service during each period of enrolment, and a large number have availed themselves of this opportunity of gaining extended naval experience under sea-going conditions. The period of enrolment and of re-enrolment in the R.C.N.V.R. is three years.

Subsection 2.—Military Forces.

The Militia of Canada is constituted by the Militia Act. The Active Militia is divided into the Permanent and the Non-Permanent Militia.

Permanent Militia.—The Permanent Force consists of the following units:—

Cavalry.—The Royal Canadian Dragoons; Lord Strathcona's Horse (Royal Canadians).
Artillery.—The Royal Canadian Horse Artillery Brigade ("A", "B" and "C" Batteries); Royal Canadian Artillery (Nos. 1, 2 and 5 Heavy Batteries and No. 3 Medium Battery).
Engineers.—Royal Canadian Engineers (13 detachments and 1 field company).
Signals.—The Royal Canadian Corps of Signals.
Infantry.—The Royal Canadian Regiment; Princess Patricia's Canadian Light Infantry; The Royal 22e Regiment (a French-Canadian regiment).
Army Service Corps.—The Royal Canadian Army Service Corps (12 detachments).
Medical Corps.—The Royal Canadian Army Medical Corps (12 detachments).
Veterinary Corps.—The Royal Canadian Army Veterinary Corps (8 detachments).
Ordnance Corps.—The Royal Canadian Ordnance Corps (12 detachments).
Pay Corps.—The Royal Canadian Army Pay Corps (12 detachments).
Military Clerks.—The Corps of Military Staff Clerks (12 detachments).

The strength of the Permanent Active Militia is limited by the Amending Act of 1919 to 10,000, but at present the limited establishment is less than 3,800.

Schools of Instruction.—The Canadian Small Arms School is the only school which is an independent unit of the Permanent Force, but at all stations of the Permanent Force in Canada Royal Schools of Instruction are conducted.

Non-Permanent Militia.—The Non-Permanent Militia consists of:—

35 Regiments of Cavalry and Mounted Rifles.
70 Field Batteries, Canadian Artillery.
16 Medium Batteries, Canadian Artillery.
11 Heavy Batteries, Canadian Artillery.
3 Anti-Aircraft Sections, Canadian Artillery.
15 Field Companies of Engineers.
2 Fortress Companies of Engineers.
7 Field Troops of Engineers.
10 Divisional Signals.
2 Fortress Signal Companies.
7 Signal Troops.
22 Contingents, Canadian Officers' Training Corps.
123 Battalions of Infantry.
15 Machine Gun Units.
12 Divisional Canadian Army Service Corps.
51 Units of the Canadian Army Medical Corps.
11 Detachments of the Canadian Dental Corps.
11 Detachments of the Canadian Army Veterinary Corps.
11 Detachments of the Canadian Ordnance Corps.
12 Detachments and 1 Base Post Office of the Canadian Postal Corps.

The total establishment of the Non-Permanent Militia is 9,057 officers and 126,127 other ranks, a total of 135,184, distributed as shown in the following table:—

2.—Permanent and Non-Permanent Active Militia in Canada, 1934.

Arm of Service.	Permanent Active Militia.		Non-Permanent Active Militia.	
	Personnel.	Horses.	Personnel.	Horses.
Staff and General List	53	–	–	–
Cavalry and Mounted Rifles	415	266	16,637	9,809
Field Artillery	409	144	9,165	4,586
Medium Artillery	53	–	2,232	848
Heavy Artillery and Anti-Aircraft Sections	227	2	1,532	45
Engineers	273	11	3,421	812
Signals	276	–	4,567	2,220

Infantry	906	28	79,866	87
Officers' Training Corps	–	–	4,422	–
Machine Gun Corps	–	–	6,516	744
Army Service Corps	274	38	1,286	–
Non-Combatants	874	–	5,177	688
Totals	**3,760**	**489**	**135,184**	**19,839**

Reserve Militia.—In addition to the Active Militia, there is also the Reserve Militia, a framework designed to serve as a basis for contingent military organization. Drill and training are voluntary and entail no expense to the public.

The reserve formations of the Active Militia, as distinguished from the Reserve Militia mentioned above, comprise:—

The Reserve of Officers (general list).
Reserve unit for each active unit.
Reserve Regimental Depots (Cavalry and Infantry).

The reserve units of the Active Militia are intended for the purpose of providing for the organization of the officers and men who have completed their service in the Active Militia or who have otherwise received a military training. On completion of service in the Active Militia men are not posted automatically to reserve units. These units are recruited by specific enlistment.

Military Districts.—For the command, training and administration of the Canadian Militia, Canada is divided into 11 military districts, each under a commander assisted by a district staff.

Militia Appropriations.—The Militia appropriations for the six fiscal years ended Mar. 31, 1931-36, are shown in Table 3.

3.—Money Voted by Parliament for the Militia, fiscal years ended Mar. 31, 1931-36.

Item.	1931.	1932.	1933.	1934.	1935.	1936.

[1]Department of National Defence. [2]Discontinued as a separate vote. [3]Revised since the publication of the 1933 Year Book.

Subsection 3.—Air Service.

Under the Act creating the Department of National Defence, the powers, duties and functions vested in the Air Board by the Air Board Act of 1919 are now administered under the direction of the Minister of National Defence.

The Royal Canadian Air Force is composed of the Permanent Active Air Force, the Non-Permanent Active Air Force, and a Reserve of Officers. The Royal Canadian Air Force administers and controls all military air operations and air operations for civil government departments. The duties of the Royal Canadian Air Force are as follows:—

(a) To organize, train and maintain an air force for the defence of Canada.
(b) To assist in the development of civil aviation by—
  (i) Providing advanced flying training to civilian pilots, instructors and commercial pilots.
  (ii) Initial development of air routes.
  (iii) Technical supervision of airworthiness and inspection of aircraft belonging to private and commercial operators, and aircraft constructed or overhauled by aircraft manufacturing firms, and acting as consultant in matters pertaining to civil aviation generally.
(c) The conduct of flying required to assist the several departments of the Dominion Government in the development and conservation of the country's natural resources, and other related services.

Permanent Active Air Force stations and units are located as follows:—

Location.	Duty.
R.C.A.F. Headquarters, Ottawa, Ont.	
R.C.A.F. Station, Camp Borden, Ont.	Training.
R.C.A.F. Station, Trenton, Ont.	Training.
R.C.A.F. Station, Ottawa, Ont.	Test and experimental work and civil government air operations.
R.C.A.F. Station, Winnipeg, Man.	Civil government air operations.
R.C.A.F. Station, Vancouver, B.C.	Coast reconnaissance and civil government air operations.
R.C.A.F. Station, Dartmouth, N.S.	Coast reconnaissance and civil government air operations.
R.C.A.F. Station, High River, Alta.	Care and maintenance basis.
No. 1 R.C.A.F. Depot, Ottawa, Ont.	Stores and repair depot.
R.C.A.F. Photographic Section, Ottawa, Ont.	

Non-Permanent Active Air Force units are located as follows:—

No. 10 Army Co-Operation Squadron, Toronto, Ont.
No. 11 Army Co-Operation Squadron, Vancouver, B.C.
No. 12 Army Co-Operation Squadron, Winnipeg, Man.
No. 15 Fighter Squadron, Montreal, Que. (in process of organization).
No. 18 Bomber Squadron, Montreal, Que. (in process of organization).

The strength of the Royal Canadian Air Force on Dec. 31, 1934, was:—

	Officers.	Airmen.
Permanent Active Air Force	117	664
Non-Permanent Active Air Force	38	236

Subsection 4.—Civil Aviation.*

The Civil Aviation Branch is under the Controller of Civil Aviation, who is directly responsible to the Deputy Minister. Its duties include the inspection of licences and registration of aircraft, air harbours, commercial and private air pilots, air engineers and air navigators. In addition to these duties, the location and construction of air routes and any matters connected with airship services are administered in this branch.

Civil aviation in the Dominion has had its chief development in connection with the exploration and conservation of the natural resources of the provinces, including forestry protection, air photography, and transport of men and supplies to remote points and mining districts. At the beginning of 1934, 17 regular air-mail routes were in operation. On Dec. 31, 1934, there were twenty air-mail routes in operation.

*See also pp. 744-746.

On Dec. 31, 1934, there were certificates and licences in force as follows: private air pilots, 427; commercial air pilots, 405; air engineers, 461; registration of aircraft, 368; air-harbour licences, 101.

Rapid progress is being made in the development of the Trans-Canada Airway. The sections between Lethbridge and Edmonton and Lethbridge and Winnipeg are completed, including equipment for night lighting on the 27 intermediate aerodromes and radio. Four other intermediate aerodromes have been completed. Forty-three sites are under development under the unemployment relief scheme; landings have been made on nine of these. Sixteen further sites have been optioned or acquired, 5 others selected and 13 remain to be located.

Subsection 5.—The Royal Military College.

The Royal Military College of Canada was founded in 1876 by the Honourable Alexander Mackenzie, then Prime Minister of Canada. Since its foundation, 2,430 gentleman cadets have been enrolled, and of this number 198 are now in attendance.

The maximum number of cadets who may be in residence at any one time is restricted by Order in Council to two hundred.

The Royal Military College has a very distinguished record in connection with the War. Of the 914 graduates and ex-cadets who served, 353 were granted commissions direct from the College, and 43 enlisted with a view to obtaining commissions; 156 ex-cadets were reported as killed in action, died of wounds, or missing. Ex-cadets of the College won the following honours and decorations: 1 Victoria Cross and 3 recommendations for the Victoria Cross, 106 Distinguished Service Orders, 109 Military Crosses, 2 Distinguished Flying Crosses, 62 other British decorations, 42 foreign decorations. Three Canadian and one Australian divisions were commanded by graduates of the College.

Ex-cadets who have served in the army, either in the regular forces or during the Great War, include 1 general, 5 lieutenant-generals, 17 major-generals, and 29 brigadier-generals or brigadiers. Eleven knighthoods have been conferred on ex-cadets for distinguished service.

The establishment of the College, as stated in the Act of 1874 (37 Vict., c. 36) was "for the purpose of imparting a complete education in all branches of military tactics, fortifications, engineering and general scientific knowledge in the subjects connected with and necessary to a thorough knowledge of the military profession, and for qualifying officers for command and staff appointments". In addition to the foregoing, the course of instruction is such as to afford a thorough practical and scientific training in civil engineering, surveying, physics and chemistry, English and French. Strict discipline, combined with physical training, riding, drill and outdoor games, forms part of the curriculum.

The College is situated on a beautiful peninsula, one mile from Kingston, with the Cataraqui river emptying into the St. Lawrence river at its junction with lake Ontario on the one side, and Navy bay on the other. The grounds cover about 500 acres. The buildings of the College proper are situated on the above-mentioned peninsula, comprising 60 acres. The remainder of the grounds, on which stands the historic Fort Henry, is at the disposal of the College for use as a training area. On the point of the College peninsula is situated Fort Frederick, built in 1837 when Kingston became the capital of Canada, the fort comprising a portion of the defences of Kingston. The College is under the supervision of the

Department of National Defence, and is inspected annually by an advisory board composed of leading Canadian citizens, both civil and military, which makes its reports and recommendations to the Minister of National Defence. The staff is composed of a commandant, a staff-adjutant, and a competent staff of civil and military professors and instructors.

A four-year course leads to a "diploma with honours", a "diploma" or a "certificate of military qualification". A number of commissions in the Canadian Permanent Force and the Royal Canadian Air Force, as well as commissions in the British Regular Forces, the Indian Army, and the Royal Air Force, are offered annually to graduates; and for cadets who desire to obtain commissions in the Royal Canadian Navy a limited number of naval cadetships are available each year to cadets who successfully complete the first two years of study and who were under 18 years of age at the time of entry into the College. To those graduates joining the British Army, the privilege of one year of seniority is granted in the British or Indian Armies. This has been arranged in order to equalize the seniority of graduates of the Royal Military College of Canada with those of the Royal Military Academy, Woolwich, or the Royal Military College, Sandhurst, since the courses at the latter institutions are shorter than the Canadian.

The principal Canadian universities admit recommended graduates to the fourth year of their civil engineering courses and to the third year of other engineering courses; and some of the universities admit graduates to the third years of arts and science courses.

The R.M.C. diploma is accepted by the Law Societies and Bar Associations of Ontario, Nova Scotia, Quebec, Manitoba, Saskatchewan, British Columbia and Alberta, as the equivalent of a B.A. degree for admission to the study of law. The Dominion Association of Chartered Accountants likewise accepts R.M.C. graduates as registered students under the same conditions as university graduates.

Entrance to the College is on a competitive basis. Candidates are required to pass a rigid medical examination, and to have obtained junior matriculation or an acceptable equivalent. Applications for admission to the College should reach The Secretary, Department of National Defence, Ottawa, before May 31 of each year.

Section 3.—Department of Public Works.*

Since Confederation and before, the constructing department of the Dominion Government has been known as the Department of Public Works. In 1879 the railways and canals were placed under the control of a new department, the building and maintenance of penitentiaries were transferred to the Department of Justice, the maintenance and construction of lighthouses to the Marine and Fisheries Department, and the smaller drill halls and armouries to the Department of National Defence. The work of the Department of Public Works is now divided into three principal branches, *viz.*, the Engineering Branch, the Architect's Branch and the Telegraph Branch.

Engineering.—The Engineering Branch conducts the construction and repair of wharves, piers, breakwaters, dams, weirs, bank and beach protection works; the improvement of harbours and rivers by dredging; the construction, operation and maintenance of dredging plant and the construction, operation and maintenance of

*Revised by J. M. Somerville, Assistant Secretary, Department of Public Works.

graving or dry docks. The construction and maintenance of interprovincial bridges and approaches thereto, also the construction, operation and maintenance of bridges with movable spans on certain highways; hydrographic and topographic surveys and examinations which are required for the preparation of plans, reports and estimates; test borings for the purpose of ascertaining nature of foundations; the testing of cements and materials of construction; the licensing of international and interprovincial ferries, and the control of works constructed in or over navigable waters by authority of the Navigable Waters Protection Act (R.S.C., 1927, c. 140).

Architecture.—The Architect's Branch constructs and maintains Government buildings, post offices, customs houses, examining warehouses, quarantine stations, immigration and experimental farm buildings, military hospitals and telegraph offices. It also constructs armouries and drill halls and leases office accommodation as required for the various departments.

Telegraphs.—The Telegraph Branch has control of the construction, operation and maintenance of all Government-owned telegraph lines and cables. These lines are located in the provinces of Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan, Alberta, British Columbia and Yukon (see also pp. 778-779).

Graving Docks.—The Department constructed five dry docks, as are shown in Table 4. The dock at Kingston, Ont., is under lease to the Kingston Shipbuilding Company, while the old Esquimalt Dry Dock was temporarily transferred to the Department of National Defence on Nov. 1, 1934. This transfer is to be effective until such time as the dock is commercially required, when it will be returned to the control of the Department of Public Works. The large dry docks at Lauzon, Que., and Esquimalt, B.C., can be divided into two parts and were built at a cost of approximately $3,850,000 each. Under the Dry Dock Subsidies Act, 1910 (9-10 Edw. VII, c. 17), several docks have been subsidized by payments of 3 to 4 p.c. per annum on the original cost for a given number of years, as shown in Table 5.

North Vancouver, B.C. (floating dock)	556·5	98	28	2,500,000	4½ p.c. for 35 years.

Expenditure and Revenue.—Table 6 shows the expenditures and revenues of the Public Works Department of the Dominion Government, for the fiscal years 1929-34. For the fiscal year 1934 the expenditure was $10,618,233, as compared with $13,473,149 in 1933—a decrease of $2,854,916, largely accounted for by reduced expenditures for harbours and rivers, dredging and public buildings.

6.—Expenditures and Revenues of the Public Works Department, fiscal years ended Mar. 31, 1929-34.

Section 4.—The Indians and Eskimos of Canada.

Subsection 1.—The Indians of Canada.*

The Indians of Canada whose affairs are administered by the Department of Indian Affairs number about 112,510, their numbers varying slightly from year to year. A small yearly increase is evident, and the popular notion that the race is disappearing is not in accordance with facts. Before they were subjected to the degenerating effects of European civilization and the devastating results of the many colonial wars, the numbers of the Indians were undoubtedly larger, but any reliable information as to the aboriginal population during either the French or the early British *régime* is non-existent, and there is no adequate basis for a comparison between the past and present aboriginal populations. An interesting sketch of the progress of the Indians of Canada since Confederation will be found in the Report of the Department of Indian Affairs, 1927.

Administration.†—Reserves have been set aside for the various bands of Indians throughout the Dominion, and the Indians located thereon are under the supervision of the local agents of the Department. The activities of the Department, as guardian of the Indians, include the control of Indian education, health, etc., the development of agriculture and other pursuits among them, the administration of their lands, community funds, estates, and the general supervision of their welfare.

*Revised by A. F. MacKenzie, Secretary, Department of Indian Affairs.
†For an outline of the early administration, see p. 937 of the 1932 Year Book.

The local administration of the Indian bands on the reserves scattered throughout the Dominion is conducted through the Department's agencies, of which there are in all 120. The number of bands included in an agency varies from one to more than 30. The staff of an agency usually includes various officers in addition to the agent, such as medical officer, clerk, farm instructor, field matron, constable, stockman, etc., according to the special requirements of the agency in question. The work of the agencies is supervised by the Department's inspectors, each inspector having charge of a certain number of agencies. Expenditures upon destitute Indians are made by the Dominion Government, either from public funds or from the tribal funds of the Indians themselves.

The Indian Act provides for the enfranchisement of Indians. When an Indian is enfranchised he ceases to be an Indian under the law and acquires the full status of citizenship. In the older provinces, where the Indians have been longer in contact with civilization, many are becoming enfranchised. Great discretion, however, is exercised by the Government in dealing with this problem, as Indians who become enfranchised lose the special protection attached to their wardship, so that it is necessary to guard against premature enfranchisement.

Treaties.—In the older eastern provinces, the history of the Indians has been one of slow development with that of the community. In western Ontario, the Prairie Provinces and the Territories the situation has been different. There, the rapid spread of civilization made it necessary to take prompt and effective measures to protect the moral claims of the Indians, which are recognized by the Government. Accordingly, treaties were entered into with the Indians, whereby the latter ceded to the Crown their aboriginal title and interest in the country. In consideration of such cession the Crown agreed to set aside adequate reserves, make cash grants, provide per capita annuities, give assistance in agriculture, stock raising, hunting, trapping, etc., as particular circumstances might require, provide education for the Indian children, and otherwise safeguard the Indians' interests. These treaties have been made from time to time as occasion arose and as new territories were opened up. No treaty has been made with the Indians of British Columbia, but their welfare has received no less attention from the Government on that account.

Government Expenditure.—On Mar. 31, 1934, the capital of the Indian Trust Fund, which a year earlier had amounted to $13,580,007, had increased to $13,602,565. The amounts expended from the Consolidated Revenue Fund were as follows: voted by Parliament for the purposes of the Department, $4,146,887; annuities by statute, $233,135.

Statistics.—Statistical tables of population, school attendance, income and agricultural activities of the Indians in Canada follow. In Table 7 the populations for 1871-1931 are compiled from reports of the various censuses since Confederation, while the statistics and other information in the remaining tables are taken from the latest Annual Report of the Department of Indian Affairs. The Department of Indian Affairs takes a quinquennial census of Indians under its control, whereas census figures include all persons of Indian origin. The quinquennial census taken by the Department in 1934 showed a total of 112,510 as compared with 108,012 in 1929 and 104,894 in 1924, an increase of 7·3 p.c. in ten years. The details of the census of 1934 are given in the Annual Report of the Department for that year. The figures of the decennial census include some thousands of persons of Indian race who are living off the reserves as ordinary citizens of Canada.

7.—Indian Population of Canada at the Decennial Censuses of 1871-1931.

Province or Territory.	1871.[1]	1881.[1]	1891.[2]	1901.	1911.	1921.	1931.

Totals	**102,358**	**108,547**	**120,638**	**127,941**[3]	**105,492**	**110,596**	**122,920**

[1]Census figures in the organized provinces and estimates for the rest of Canada.
[2]Racial origin not taken in 1891; the figures have been taken from the report of the Department of Indian Affairs of that year.
[3]Includes 34,481 "half-breeds".
[4]The smaller Indian population of the Northwest Territories in 1921 is to be ascribed to the extension of the boundaries of Quebec, Ontario and Manitoba in 1912. This also accounts for the increase in the 1921 Indian population of these provinces.

Indian Education.—The educational work of the Department is now very extensive. In the fiscal year ended Mar. 31, 1934, a total of 345 Indian schools were in operation, including 79 residential schools for Indians with an enrolment of 8,596, and 256 day schools for Indians with an enrolment of 8,653 Indian pupils, also 10 combined public and Indian schools, with 199 Indian pupils enrolled. The total enrolment in the Indian schools has increased from 12,799 in 1915-16 to 17,448 in 1933-34 and the average attendance from 8,080 to 13,352 or from 63·1 p.c. to 76·5 p.c. of the enrolment. Continuation and high school work is now being taught in several of the day and residential schools. The amount spent on Indian education in the fiscal year ended Mar. 31, 1934, was $1,620,130.

[1] Includes income received from timber, mining and annuities earned as interest on Indian trust funds.

Subsection 2.—The Eskimos of Canada.*

The Eskimos are a littoral race, dwelling on the northern and northeastern mainland coasts and on islands in the Arctic archipelago and in Hudson bay. Though nomads, they never go far from the sea except to hunt caribou, the skin of which animal is required for clothing. They subsist largely on marine animals and fish. They inhabit chiefly the Northwest Territories, the Yukon Territory, and the Ungava district of Quebec. According to the Census of 1931 the total Eskimo population of Canada was 5,979, made up as follows: Northwest Territories 4,670, Yukon 85, Alberta 3, Manitoba 62, Quebec 1,159. The administrative care of those Eskimos outside of the organized provinces devolves upon the Department of the Interior, which has done much for them by providing medical attention, by setting aside wild-life preserves for the protection and conservation of game resources, by importation of reindeer, distribution of buffalo hides and meat and caribou skins for bedding and clothing, and the establishment of permanent stations in the eastern, central, and western Arctic, from which regular patrols are made.

*Revised by J. Lorne Turner, Director, Lands, Northwest Territories and Yukon Branch, Department of the Interior, Ottawa.

Section 5.—Pensions and other Provision for War Veterans.*

Pensions Division.—This Division is responsible for the administration of returned soldiers' affairs under the Department of Pensions and National Health Act and the War Veterans' Allowance Act. It is also responsible by direction of the Canadian Pension Commission for certain administrative duties under the Pension Act and the Returned Soldiers' Insurance Act. The Representative of the Treasury is responsible for all payments under these Acts.

The Annual Report for the fiscal year ended Mar. 31, 1934, shows a decrease in the number of ex-members of the Forces who received in-patient hospital treatment, the number being 11,718 as against 13,343 in 1932-33 and 14,267 in 1931-32. The Department maintains eight hospitals, situated in the following centres: Halifax, Saint John, Ste. Anne de Bellevue, Toronto, London, Winnipeg, Calgary and Vancouver. The sheltered employment workshops are still operated at Hamilton, Montreal and Halifax and one shop by the Red Cross Society at Victoria.

One of the features of the activities of the Department is provision for the care of veterans in a departmental institution for pensioners who through age or infirmity are unable to care for themselves. The number of such cases shows an increase during the year, the total on Mar. 31, 1934, being 250 as against 213 a year previous and 198 on Mar. 31, 1932. The issue of orthopædic and surgical appliances has been maintained with a slight decrease. The number of pensioners who have been granted relief was 12,735 in 1933-34 as compared with 14,368 in 1932-33, 12,303 in 1931-32 and 8,811 in 1930-31. The expenditure on relief in 1933-34 was $1,912,563; in 1932-33, $1,978,284; 1931-32, $2,082,052; and 1930-31, $907,010.

The provision under which the Department assumes responsibility in respect of accidents sustained by pensioners of 25 p.c. and upwards when engaged in industry has been continued. During the fiscal year under review, the number of claims was 180; in 1932-33, 179, and in 1931-32, 200. The expenditure was as follows: 1933-34, $36,420; 1932-33, $17,641; 1931-32, $49,878. The expenditure is largely governed by the number of fatal and serious accidents.

The following is a summary statement of the manner in which the funds appropriated by Parliament have been dealt with and also sets forth the costs of administration and the adjudication of pensions. The cost of administration was 3·642 p.c.

NET PAYMENTS BY DEPARTMENT OF PENSIONS AND NATIONAL HEALTH FOR THE FISCAL YEAR ENDING MAR. 31, 1934.

Pension Appeal Court	37,436	
Comptroller of the Treasury	380,853	
		$2,121,189
Total Expenditure		$54,569,873

To arrive at the actual cost of administration, not only expenditure, but income and turnover of trust funds must be included. In addition, therefore, to the foregoing, the administration cost should be spread over the following:—

Revenue and refunds	794,527
Casual Revenue	187,609
Returned Soldiers' Insurance premiums and interest	2,026,027
Funds deposited to trust accounts, pensions under administration, etc.	671,413
	$ 3,679,576

Cost of administration—3·642 p.c.

The Canadian Pension Commission.—By c. 45 of the Statutes of 1933, the Board of Pension Commissioners for Canada and the Pension Tribunal ceased to exist; their duties were taken over by the Canadian Pension Commission which was formed by the Act referred to, and the personnel of the Commission was increased from three to not less than eight nor more than twelve. Eight members were appointed.

The Commission is responsible for the adjudication and awarding of pensions in respect of disabilities connected with military service and the awarding of pensions to the dependants of those who die. It operates under the authority of the Pension Act. The following table shows the number of pensions in force at the end of the

fiscal years 1918 to 1934, together with the annual liability. The large increase in disability pensioners from 1930 to 1933 inclusive was primarily due to the reinstatement on pension of those who had commuted their pensions from 1920 onwards. This restoration was under the authority of an amendment to the Pension Act in 1930.

13.—Pensions in Force as at Mar. 31, 1918-34.

Veterans' Bureau.—Pursuant to legislation passed in 1930, a Veterans' Bureau was organized as a branch of the Department and came into active operation on Oct. 1, 1930. The duties of the Bureau were set forth on p. 945 of the Canada Year Book, 1932. Briefly stated, the Bureau was created and is operated to assist applicants for pension in the preparation and presentation of their cases. There is a Chief Pensions Advocate with his staff at Ottawa, and Pensions Advocates have their offices in all the principal cities of Canada.

War Veterans' Allowances.—A synopsis of the War Veterans' Allowance Act, which came into force on Sept. 1, 1930, appeared on p. 946 of the Canada Year Book, 1932. The following statistics show the activities of the War Veterans' Allowance Committee for the fiscal years ended Mar. 31, 1933 and 1934.

NUMBER OF CASES HANDLED DURING YEAR.

	1933.	1934.
Number of new applications dealt with	2,746	3,081
Number of cases receiving allowance reviewed	5,312	7,540
Totals	8,058	10,621

Returned Soldiers' Insurance.*—The Returned Soldiers' Insurance Act is under the jurisdiction of the Canadian Pension Commission as agent for the Minister of Finance. Collections are made through the Department and payments by the Representative of the Treasury. After several extensions, the date to which applications could be received expired on Aug. 31, 1933. The following statement shows the operations under this Act during the fiscal years ended Mar. 31, 1933-35.

	1933.	1934.	1935.
Applications received	1,638	3,007	nil
Applications accepted	1,450	2,801	4
Applications rejected	114	361	nil
Number of policies issued	1,450	2,801	4
Number of policies reinstated	2,009	1,796	1,957
Number of policies surrendered for cash	1,814	1,411	844
Number of policies in force	25,736	28,240	26,933
Total amount of insurance	$60,275,118	$61,069,009	$57,903,583
Premium income	$1,575,294	$1,557,532	$1,498,457
Expenditure	$1,085,162	$1,004,260	$844,241
Number of death claims from commencement of operations	2,967	3,233	3,50
Amount of death claims	$7,810,519	$8,358,551	$8,957,368
Balance on hand	$11,291,512	$12,313,279	$13,487,884

Section 6.—Soldier and General Land Settlement.†

In the session of Parliament of 1934 important legislation was passed by Parliament by which all lands administered by the Soldier Settlement of Canada are placed in exactly the same position with respect to the taxing laws of the provinces as lands occupied by farmers generally. This is a principle for which organized municipalities have been contending for some years and the Government felt that in fairness to other farmer taxpayers this principle should be conceded through appropriate Parliamentary action. The amendment to the Act was made retroactive to Jan. 1, 1933. Recognizing at the same time that there were many settlers on Soldier Settlement lands who were in arrears to municipal taxing authorities, the Government made provision in the estimates for 1934-35 for the payment of such taxes on lands occupied by soldier settlers up to the effective date of the above legislation.

At the end of the calendar year 1934, the number of farms under the jurisdiction of the Soldier Settlement of Canada was 21,268, made up of: soldier settlers, 10,892; civilian settlers, 5,783; British families (including those under the New Brunswick Family Scheme), 2,077; unsold farms on hand, 2,516. Of the settlers who have retired from the Scheme 5,684 have repaid their loans in full (2,792 by cash repayment, 2,892 by sale of properties).

The public investment as at Dec. 31, 1934, was $55,851,821.59. There had been repaid to the Public Treasury from all sources $54,064,046.15.

*Revised by D. S. Drew, Officer in Charge of Returned Soldiers' Insurance.
†Revised by C. W. Cavers, Soldier Settlement of Canada.

Under the 3,000 British Family Scheme 3,346 families were accepted for settlement, of whom 1,503 families withdrew from the Scheme. Under the New Brunswick British Family Scheme 359 families were accepted for settlement and of these 103 withdrew.

Further Land Settlement activities of this Department included the Back-to-the-Land Movement inaugurated by the Minister in 1930 in co-operation with the railways, and the Relief Land Settlement Plan, which was inaugurated in 1932 by the Dominion Government in co-operation with the provinces and municipalities. Under the former plan a total of 15,589 families and 33,842 single men have been placed on the land.

The Relief Land Settlement plan was responsible for the placing of 3,948 families on the land up to the end of 1934. These families were selected from among unemployed who had previous farm experience and were in receipt of direct relief.

In connection with the investigations carried out by the field staff of the Soldier Settlement for the War Veterans' Allowance Committee, Board of Pension Commissioners, Department of Pensions and National Health, Department of the Interior and Department of Immigration and Colonization, a total of 22,170 cases have been dealt with from Jan. 1, 1932, to Dec. 31, 1934.

Section 7.—Department of the Secretary of State.*

The Department of the Secretary of State was constituted in its present form in 1873, through the merging of the previously-existing offices of the Secretaries of State for Canada and for the provinces. The Secretary of State is the official mouthpiece of the Government as well as the medium of communication between the Dominion and Provincial Governments, all correspondence between the Governments being conducted by him with the Lieutenant-Governors. He is also the custodian of the Great Seal of Canada and the Privy Seal as well as the channel by which the general public may approach the Crown.

The Secretary of State is also the Registrar-General, registering all proclamations, commissions, licences, warrants, writs, and other instruments issued under the Great Seal and the Privy Seal. He is further charged with the administration of the Boards of Trade Act, the Companies Act, the Canada Temperance Act, the Copyright Act, the Naturalization Act, the Patent Act, the Trade Unions Act, the Ticket of Leave Act, the Unfair Competition Act, and with the collection and tabling of Parliamentary Returns. The following information on these subjects has been secured in the course of administration.

Charters of Incorporation.—The number of companies incorporated under the Companies Act and amending Acts during the fiscal year 1933-34 was 531 with a total capitalization of $175,239,320. Supplementary letters patent were granted during the year to 185 companies, 38 of which increased their capital stock by the aggregate amount of $62,615,060; 61 decreased their capital stock by $86,810,799; the remaining 86 were granted supplementary letters patent for various purposes, such as changing names, extending powers, etc. The total capitalization of new companies plus the increase of capital of existing companies amounted to $237,854,380, partly offset by the above-mentioned decreases in capitalization totalling $86,810,799.

*Revised by E. H. Coleman, K.C., Under-Secretary of State, Department of the Secretary of State.

In Table 14 will be found the number and capitalization of companies incorporated during the years 1900-34.

[1]Includes consideration of the amounts of capital received on the issue of shares without nominal or par value.

Naturalizations.—The naturalizations effected under the Naturalization Act (R.S.C., 1906, c. 77) for the calendar years 1908-17 inclusive, were given on p. 594 of the Year Book for 1919. Since Jan. 1, 1918, the only method of obtaining naturalization has been under what is known as the "Imperial" Naturalization Act, which came into force on Jan. 1, 1915. This Act was known under the title of the Naturalization Act, 1914, until July 7, 1919, when it was repealed and the Naturalization Act, 1919, came into force. On July 1, 1920, the Naturalization Act, 1919, was repealed, and the Naturalization Act, 1914, was revived and amended under the title of the Naturalization Acts, 1914 and 1920. By an amendment passed by Parliament in 1923, the restriction by which persons of alien enemy birth were ineligible to receive certificates of naturalization for a period of 10 years after the termination of the War was removed, and at the present time any alien may apply for naturalization, regardless of his nationality. All these Acts have been consolidated in R.S.C., 1927, c. 138. Since Jan. 15, 1932, women British subjects on marrying aliens may by declaration retain their British nationality, if they have

not by marriage acquired their husbands' nationalities, and the wives of aliens no longer become British subjects through their husbands' naturalization. They must apply to the Secretary of State.

Table 15 shows the number of naturalization certificates issued to single persons or heads of families under these Acts during the calendar years from 1924 to 1933. The total numbers of persons naturalized during the fiscal years ended Mar. 31, 1933 and 1934, were 23,617 and 21,908 respectively, including (except as stated above) the wives and minor children of those to whom naturalization certificates were issued.

Canada Temperance Act.—Under Parts I and II of this Act, provision is made for the prohibition of the sale of intoxicating liquors in counties and cities. The last vote taken under these parts was in the County of Compton, Quebec, on April 28, 1930, in response to a petition for the repeal of the Act in that county. The vote resulted in favour of the repeal, which became effective on June 14, 1930. Part III of the Act relates to penalties and prosecutions, Part IV to the prohibition of the importation and exportation of intoxicating liquors into and from the provinces, while Part V enacts provisions in aid of provincial legislation for the control of the liquor traffic.

Section 8.—Royal Canadian Mounted Police.

The R.C.M. Police is a constabulary maintained by the Dominion Government. When organized in 1873 it was known as the North West Mounted Police; in 1904, its name was changed to the Royal North West Mounted Police and in 1920, to the Royal Canadian Mounted Police.

The Force is controlled and administered by a Minister of the Crown (at present, the Minister of Justice) and may be employed anywhere in Canada.

It is primarily responsible for the maintenance of law and order in Yukon, the Arctic regions, the unorganized Northwest Territories and, for a variety of services, or the Dominion Government in all provinces of the Dominion. A large number of the Dominion departments utilize its services in investigations and in administrative work.

Amongst the many services rendered for the Dominion Government, the repression of the traffic in noxious drugs, the protection of Government buildings and dockyards, the enforcement of Dominion laws and the duties of the Preventive Service for the Department of National Revenue may be mentioned.

Under the R.C.M. Police Act, any province may enter into an agreement with the Dominion Government for the services of the R.C.M. Police to enforce provincial laws upon payment for its services.

In addition to the Dominion duties referred to, the Force at the present time has agreements with the provinces of Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta, whereby the R.C.M. Police is responsible for the enforcement of the Criminal Code and provincial statutes in those provinces.

The Force is divided into 15 divisions of varying strength distributed over the entire country. The term of engagement is 5 years for recruits with re-enlistment for 1, 2, 3 or 5 years. The officers are commissioned by the Crown.

Recruits are trained at Regina, Sask. The course of training covers six months and consists of drill, both mounted and foot, and general instructions in police duties. The Force is distributed from Halifax to Vancouver and from Craig Harbour, on Ellesmere Island, in the far north, to the International Boundary between Canada and the United States.

The Force, which is commanded by a Commissioner whose Headquarters are at Ottawa, had a strength of 2,605 on Dec. 31, 1934, including masters and seamen employed with the Marine Section for the prevention of smuggling, distributed as follows:—

Section 9.—The Civil Service of Canada.

Organization.*—Prior to 1882, appointments to the Civil Service were made directly by the Government. In that year, a Board of Civil Service Examiners was appointed to examine candidates and issue certificates of qualification to those successful at examinations. Appointments, however, were still made by the Government of the day.

The Royal Commission of 1907, appointed to inquire into the Civil Service Act and its operation, reported in favour of the creation of a Civil Service Commission. In 1908 this body was appointed; it consisted of two members appointed by the Governor in Council and holding office during good behaviour, but removable by the Governor General on address of the Senate and House of Commons. The Civil Service was classified into three divisions under the Deputy Heads of Departments, each division consisting of two subdivisions, each of these having its scale of salaries. The Commission was charged with the organization of and appointments to the Inside Service (at Ottawa), certain appointments to be made after open competition and others after qualifying tests, also with holding qualifying examinations for the Outside Service (the Service apart from Ottawa) to obtain lists from which selections could be made by the various Departments. All British subjects between 18 and 35 years of age who had resided in Canada for three years were eligible to try these examinations.

In 1918 a third member of the Civil Service Commission was appointed, and by the Civil Service Act of that year the principle of appointment after open competition was applied to the Outside as well as the Inside Service. The Act also provided for the organization by the Commission of the various Government Departments, for a classification of all positions in the Service on a duties basis, for the establishing of new rates of compensation, and for the principle of promotion by merit whenever consistent with the best interests of the Service. Provision was also made for preference, in the matter of appointment to the Service, to be given to qualified applicants who had served in the Great War.

Civil Service Statistics.†—From April, 1924, a monthly return of personnel and salaries has been made by each Department to the Dominion Bureau of Statistics, according to a plan that ensures comparability between Departments and

* Revised by Wm. Foran, Secretary, Civil Service Commission, Ottawa.

† Revised by Col. J. R. Munro, Chief of the Finance Branch of the Dominion Bureau of Statistics, Ottawa.

continuity in point of time. The institution of this system was preceded by an investigation back to 1912, the summary results of which are presented in Table **17.**

During the war years, as will be seen from Table **17,** the number of employees increased very rapidly, as a result of the enlargement of the functions of government and the imposition of new taxes, necessitating additional officials as collectors. Such new services as the Department of Pensions and National Health and the Soldier Settlement Board were also created. The maximum was reached in January, 1920, when 47,133 persons were employed; this number has since decreased to 41,346 in January, 1934. It may be added that, out of 40,469 in March, 1934, 1,151 in the Income Tax Branch and 2,266 in the Department of Pensions and National Health, or 3,417 in all, were engaged in services of outstanding importance which had no existence before the War. Further, an additional 10,842 persons were, in March, 1934, employed in the Post Office Department, performing services of an industrial rather than of a governmental type, and receiving their salaries out of the payments of the public for services immediately rendered, rather than out of taxation. During the last fiscal year the system of reporting non-enumerated employees of the Post Office Department was changed from a monthly to a quarterly basis, which accounts for the apparent abnormally increased expenditure for March, 1934, as compared with March, 1933 and previous years.

The statistics of numbers of employees and of salaries, now being secured monthly, are more comprehensive than those previously published, as a result of the inclusion of various classes of employees, largely "part-time", "seasonal" and "fees of office" employees, who were not included in the report published in 1925. These employees are largely in the Departments of Marine, Fisheries and Public Works. There remain, however, many persons in the "non-enumerated classes" whose numbers cannot be supplied monthly by the departmental officials but whose compensation is included in the monthly figures of expenditure on personnel, as shown in Table **18.**

[1] Figures for January, 1925-34 are not comparable with those for preceding Januaries, because monthly records now being published include various classes of employees not included in the historical record for the 13 years 1912-24. In Table 18 will be found comparable figures of employees in the various Departments in March, 1933, and March, 1934.

Table 18, which gives statistics by Departments, with a further classification by principal branches where such are recorded, is included to give comparable figures for the latest months. In the month of March, 1934, the total number of employees in the enumerated classes was 40,469 as compared with 41,911 in March, 1933. The total expenditure on wages and salaries for all classes of employees for March, 1934, was $8,256,702 as compared with $6,648,595 for March, 1933. As already mentioned, the increase is due to the change to a quarterly system of reporting of the Post Office Department in 1934 from a monthly method in 1933.*

*Total expenditures on salaries and wages for all other Departments combined were $4,155,567 in March, 1933 and $3,879,962 in March, 1934.

Section 10.—Harbour Commissions: Public Harbours and Harbour Masters.

A description of the two methods of administration of the harbours in Canada, by a Commission in the one case, and by a Harbour Master operating under the direct supervision of the Department of Marine in the other, together with a list of the harbours which are under the Commission form of administration, with the year each individual Commission was created, was given at p. 1013 of the Year Book for 1930. No legislative action having as yet resulted from the report and recommendations of Sir Alexander Gibb and partners in the year 1931, following their study of the major Canadian ports as to desirable changes in the form of administration thereof, the harbour administration remains the same as described in the above-mentioned article.

Section 11.—Race Track Betting.

By an amendment to Section 235 of the Criminal Code, passed in 1920, the supervision of race track betting, under the pari-mutuel system, was placed in the hands of the Minister of Agriculture. The actual supervision is carried out by officers of the Royal Canadian Mounted Police and operated for the first time during the racing season of 1921. Statistics are available from the year 1924 and are shown in Table **19** for the Dominion as a whole, while Table **20** shows the operations by provinces for the year 1933.

Section 12.—The Advisory Board on Tariff and Taxation.

The Tariff Board was constituted by Act of Parliament in 1931 (Chapter 55, 21-22 Geo. V.). It consists of three members, namely: Chairman, Vice-Chairman and Member, and a Secretary, all appointed by the Governor in Council. The present incumbents are the Honourable George H. Sedgewick, K.C., Chairman, Mr. Milton N. Campbell, Vice-Chairman, and Mr. Charles P. Hébert, Member. Mr. Hector B. McKinnon is Acting Secretary. The personnel of the Board was appointed in February, 1933. The first public sitting was held in July, 1933.

The constitution and duties of the Board are defined in two parts of the Act of 1931.

Under Part I, the Board makes inquiry into and reports upon any matter on which the Minister of Finance desires information, in relation to any goods which, if brought into Canada or produced in Canada, are subject to or exempt from duties of customs or excise. The investigation into any such matter may include inquiry as to the effect which an increase or decrease of the existing rate of duty upon a given commodity might have upon industry or trade, and the extent to which the consumer is protected from exploitation.

It is also the duty of the Board to inquire into any other matter or thing in relation to the trade or commerce of Canada which the Governor in Council sees fit to refer to the Board for inquiry and report.

In accordance with the provisions of Articles 10 to 15 of the United Kingdom-Canada Trade Agreement, His Majesty's Government in Canada has undertaken that, on the request of His Majesty's Government in the United Kingdom, it will cause a review, in accordance with the principle laid down in Article 11 of the Agreement, to be made by the Tariff Board of the duties charged on any commodities specified in such request.

The principle laid down in Article 11 of the Agreement is that protective duties shall not exceed such level as will give United Kingdom producers full opportunity of reasonable competition on the basis of relative cost of economical and efficient production, provided that, in the application of such principle, special consideration shall be given to the case of industries not fully established.

The Act provides that reports shall be made to the Minister of Finance and tabled in the House of Commons by him. To Mar. 31, 1935, the Board has reported on thirty-eight references. The principal commodities reported on were wool textiles; boots and shoes; jute yarns and twines; fruits and vegetables; hookless

'asteners (zippers); wooden doors; silver-bearing articles (toiletware); dextrines; rabbit skins; brass, copper and nickel-silver commodities; boiler tubes; skelp; cocoa mats and matting.

Part II of the Act empowers the Board to hear and decide appeals from rulings made by the Department of National Revenue with respect to fair market value of goods for duty purposes, erroneous appraisals, and the rate of duty applicable to any class of goods. Findings of the Board on Appeals are published in the *Canada Gazette*. To Mar. 31, 1935, forty-four Appeals have been registered. Decisions by the Board have been made for thirty-one. Nine were withdrawn after registration. For three the Appellants are not ready to proceed with hearing; one is awaiting decision of the Board.

Section 13.—Liquor Control in Canada.

During the years 1916 and 1917, as a war policy, legislation prohibiting the sale of alcoholic liquors, except for medicinal and scientific purposes, was passed in all the provinces except Quebec, where similar legislation was passed in 1919. The prohibition extended to the sale of beer and wine except in Quebec. Native wine, however, could be sold in Ontario.

In aid of provincial legislation prohibiting or restricting the sale of intoxicating liquors, the Dominion Government in 1916 passed a law making it an offence to send intoxicating liquors into any province to be dealt in contrary to the law of that province. In 1919 this Act was changed to read that "on the request of the Legislative Assembly of a province a vote would be taken on the question that the importation and the bringing of intoxicating liquors into such province be forbidden". If the majority of those voting were found to be in favour of such prohibition, the Governor in Council was to declare it in force.

After the War the provinces continued under prohibition for varying periods. Plebiscites were taken from time to time to ascertain the will of the electorate as to whether the policy of prohibition, adopted as an emergency war measure, should be continued. During 1921 Quebec and British Columbia discarded the existing prohibition laws and adopted the policy of liquor sale under government control. The same course was followed by Manitoba in 1923, Alberta in 1924, Saskatchewan in 1925, Ontario and New Brunswick in 1927 and Nova Scotia in 1930. Thus Prince Edward Island is the only province still adhering to a policy of prohibition.

The provincial Liquor Control Acts have been framed to conform to conditions peculiar to the regions where they are in force and no two are exactly alike. The salient feature of all is the establishment of a provincial monopoly of the retail sale of alcoholic beverages, with the practical elimination of private profit therefrom. Partial exception is made in the retail sale of malt liquor by brewers, which certain provinces permit while reserving regulative rights and taxing such sales heavily. In all the provinces, however, spirits may be bought only at government liquor stores. The provincial monopoly extends only to the retail sale of alcoholic beverages, the manufacture being still in private hands but under the supervision of the Liquor Boards or Commissions. The original Liquor Control Acts have been modified from time to time as deemed advisable. Brief summaries of the legislation are given in the Bureau's Annual Report on the Control and Sale of Liquor.

21.—Gross Sales and Net Profits of Liquor Control Boards, Additional Revenues Paid Directly to Governments, and Total Net Revenue from Liquor Control, 1931-33.

NOTE.—For Quebec, Manitoba and Alberta gross sales do not include beer sold direct by the brewers to the licensees.

[1]Separate figures on beer are published by the Quebec Liquor Commission, as follows:—

Fiscal Year.	Beer Manufactured and Sold within the Province.		Beer Imported from Ontario.		Beer Exported from the Province.		Tax of 5 p. c. on Gross Sales Paid to Liquor Commission.
	Gallons.	$	Gallons.	$	Gallons.	$	$
1931.....	27,668,675	20,934,014	1,299,421	1,024,311	1,652,263	1,287,590	1,162,296
1932.....	24,420,391	18,377,182	1,476,473	1,149,008	1,556,906	1,199,510	1,036,285
1933.....	18,734,987	14,176,446	1,396,231	1,090,417	1,319,541	1,128,729	819,780

[2]In Manitoba and Alberta the value of beer sales is not given but the beer taxes paid to the Boards are tabulated below. In this connection it should be noted that the Board also pays the beer tax on its purchases from the brewers and the beer sales of the Board are included in the total gross sales shown above.

Fiscal Year.	Manitoba.		Alberta.
	Tax.	Accrued Tax.	Tax.
	$	$	$
1931.....	357,732	58,074	440,184
1932.....	306,169	49,284	355,452
1933.....	281,107	39,376	398,729

[3]Includes $1,500,000 transferred from the reserves.

Sales by Liquor Control Boards.—Data on gross sales, other revenue and net profits of the Provincial Liquor Boards, are tabulated in Table **21**. In connection with the figures on gross sales it is essential to note that for Quebec, Manitoba and Alberta, the sales of beer made directly by the brewers to the licensees are not included. The proceeds from such sales do not pass through the Boards, but the purchasers must pay through the brewers to the Boards a tax equal to 5 p.c. of the purchases in the case of Quebec, 12½ cents per gallon in Manitoba, and 15½ cents per gallon in Alberta. For the latter two provinces it is possible to calculate from the taxes the gallonage of beer sold but the corresponding values are not available. For Quebec the quantity and value of sales are published by the Liquor Commission, as shown in the footnote to the table.

Further, it should be pointed out that the values as given for Quebec, Manitoba, Alberta and British Columbia do not represent the sales values to the final consumers, as in these provinces the sale of beer by the glass is permissible. Of course, all the liquor sold in any province is not consumed within the province. The tourist traffic is a very important factor in this connection.

All the revenue resulting from the Liquor Control Acts is not paid to the Liquor Boards. In certain provinces, permit fees are paid directly to the governments and do not pass through the Board. Table **21** further indicates the total revenue accruing to the governments through the control of liquor sales.

The reports of the Boards do not in all cases show the quantities of liquors sold; in comparing values for a series of years or between provinces it should be borne in mind that price variations may be an important factor.

Apparent Consumption of Liquor in Canada.—It is not possible to obtain accurate figures on Canadian consumption of liquor. Except in Nova Scotia, Quebec, Ontario and Alberta, the Liquor Boards do not publish figures to show sales on a gallonage basis, and even were such data on quantity sales available for all provinces they would not necessarily represent Canadian consumption. For example, our great tourist traffic must be considered, since it is likely that the quantities carried away by individual tourists would reach a considerable amount. Further, there is no definite information regarding the illegal traffic in liquor, though inquiry has revealed that such illicit business has reached fairly large proportions.

In Tables **22, 23** and **24** an attempt has been made to indicate separately the apparent consumption in Canada of spirits, malt liquors and wines. Obviously, these computations are subject to error for the reasons mentioned above, and also because no consideration has been given to increases or decreases in the quantities held in stock by the Boards or by licensees. For example, owing to exceptionally favourable conditions abroad, the Liquor Boards may in certain years buy heavily to replenish stocks or create reserves; such purchases would unduly weight the apparent consumption figure for these years. The figures in these tables have been arrived at as follows:—

Spirits.—Practically the total production of spirits is placed in bonded warehouses whence it is released for various purposes. The quantities shown as "entered for consumption" are released from warehouse, duty paid, presumably for consumption for beverage purposes in Canada. However, part of these may be exported. The supply of spirits available in Canada for home consumption or for export must be the sum of the quantities shown under (a) entered for consumption; (b) im-

ports; and (c) exports in bond, and if the total domestic exports and re-exports of imported goods are deducted from this figure the remainder indicates the apparent consumption in Canada.

Malt Liquors.—Only a small part of the output of malt liquors is placed in warehouses. The available supply is, therefore, made up of (a) production; (b) changes in warehouse stock; and (c) imports, and by deducting the domestic exports and re-exports of imported goods from this total supply, it is possible to obtain a figure to show the apparent consumption in Canada.

Wines.—The apparent consumption of native wine is obtained by dividing the rates of excise tax into the total tax collections. This is believed to furnish a better measure of consumption than the method formerly used, *i.e.*, to subtract the exports from the production, since part of the product is not consumed in the year of production but is placed in storage for maturing. The apparent consumption of imported wines is arrived at by deducting from the imports into Canada, the re-exports of foreign supplies.

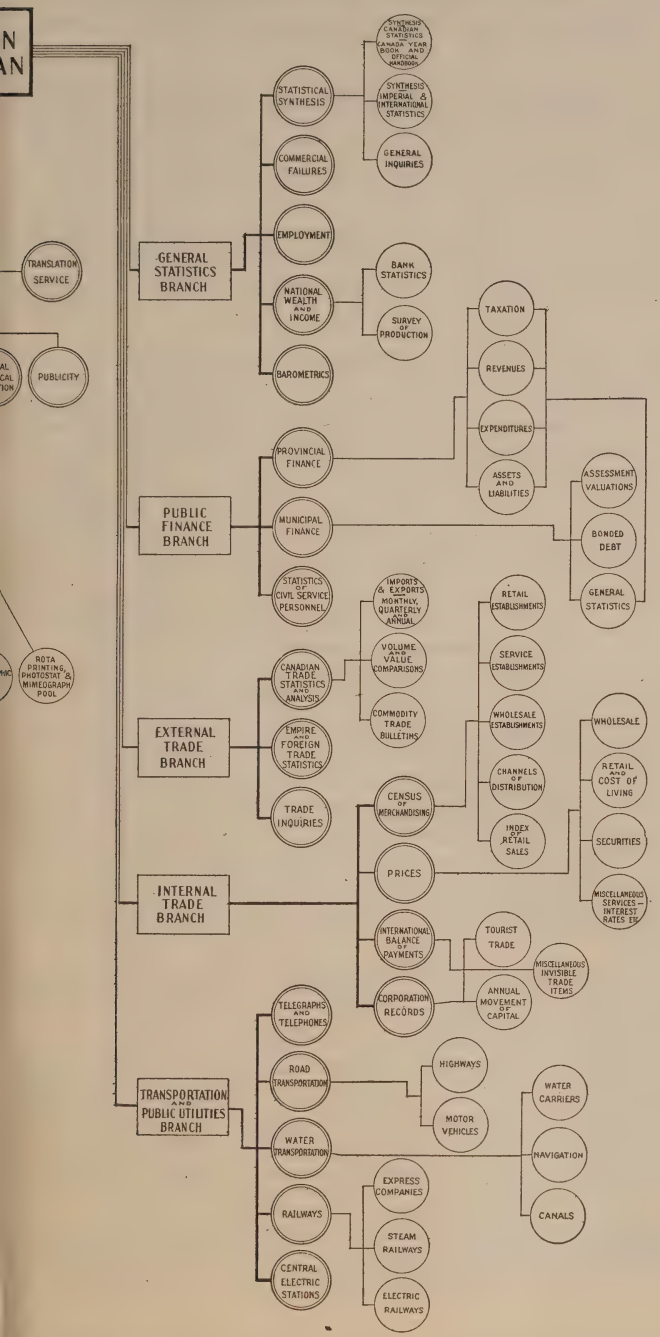
Section 14.—Other Miscellaneous Administration.

In previous editions of the Canada Year Book this chapter has been brought to a close with outlines of Dominion Government administration as follows:—



The International Joint Commission.
The Geodetic Survey of Canada.
The Topographical Survey.
The Dominion Observatories.

No material change has taken place in the functions of these organizations and the reader is referred to pp. 1014-1017 of the 1930 Year Book for this information.

ORGANIZATION CHART OF T

ON BUREAU OF STATISTICS

CHAPTER XXIX.—SOURCES OF OFFICIAL STATISTICAL AND OTHER INFORMATION RELATIVE TO CANADA.

The chief source of information on the current state of the country is the Dominion Bureau of Statistics, organized as the central statistical bureau for Canada, and described in the first part of this chapter; a list of its publications, which cover almost the whole field of the national statistics, is given in Section 1.

The second section of the chapter contains a list of the Acts of Parliament administered by the several departments of the Dominion Government, and the third section a bibliography of the publications of these departments. This is followed, in Section 4, by a bibliography of the publications of Provincial Governments.

Section 1.—The Dominion Bureau of Statistics.*

The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43)†. The Act was a consolidation of all previous statistical legislation and was based on the report of a Commission on Statistics, appointed in 1912, which recommended (a) a series of specific reforms and enlargements in Canadian statistics, and (b) a policy of statistical co-ordination for the Dominion, under central direction. In 1915, following the recommendations in this report, the office of Dominion Statistician was created.

The Bureau has been constituted by the transfer or absorption, by Orders in Council, of the following work and branches: (1) the Census and Statistics Office (covering the census, and also agriculture, general manufactures and criminal statistics), (2) Fisheries Statistics, (3) Mining Statistics, (4) Forestry Statistics, (5) Dairying and Fruit Statistics, (6) Water- and Electric-Power Statistics, (7) the Railways and Canals Statistical Branch of the Department of Railways and Canals, (8) the Trade Statistical Branch (exports and imports), (9) Grain Trade Statistics, (10) Live-Stock Statistics, (11) Prices Statistics, and (12) Employment Statistics. In addition four new branches were created, dealing respectively with Public Finance, Internal Trade, Vital Statistics, and Education. Subsequently the statistical activities of the Fuel Controller and the Board of Commerce were absorbed. Modifications of the Bankruptcy, Public Health and Railway Acts, and of the regulation *re* franking privileges were also made, with a view to facilitating the collection of statistics.

The Bureau has completed the plans for a unified, nation-wide statistical system, covering every important phase of social and economic activity, and has carried them out to a considerable degree.

The main achievement of the Bureau has been in the organization of the several subjects in correlation with each other in accordance with this general plan, and the consequent establishment of a comprehensive viewpoint of the country as a "going concern". In addition, there has been created what is frequently called a central "thinking office" in statistics, continuously in touch with general conditions and the line of probable developments.

*A more complete account of the formation and activities of the Bureau of Statistics will be found on pp. 961-964 of the 1922-23 Year Book.

† Consolidated as the Statistics Act (c. 190, R.S.C., 1927).

The final concept in the organization of the Bureau of Statistics is that of a national laboratory for social and economic research. Statistics are not merely a record of what has been, but are for use in planning what shall be; it is the duty of a statistical bureau to assist directly in the day-to-day problems of administration, as well as to provide their theoretic background. One of the most significant of recent developments in administration is the extent to which statistical organization has been increased as a guide to national policy. Though its usefulness has only begun, the Dominion Bureau of Statistics has laid the foundations for a service comparable with the increasingly important position taken by Canada in the economic and political world.

Publications of the Bureau.—The first annual report of the Dominion Statistician contained a full description of the organization of the Bureau and of its subject matter.* The main Branches of the Bureau are as follows: I. Administration; II. Population—Census and Vital Statistics; III. Agricultural Statistics; IV. Fisheries, Furs, Animal and Dairy Products; V. Mining, Metallurgical and Chemical; VI. Forestry and Allied Industries; VII. General Manufactures; VIII. External Trade (Imports and Exports); IX. Internal Trade; X. Transportation; XI. Financial Statistics; XII. Statistics of Administration of Justice; XIII. Education Statistics; XIV. General Statistics. The publications of the several Branches are as follows:—

ADMINISTRATION—

Annual Report of the Dominion Statistician. *Price 10 cents.*

POPULATION—

Census—

I. Census of Population and Agriculture, 1931.

Bulletins of the Seventh Census of Canada, 1931, as follows:—

(1) Population:—*Preliminary Bulletins.*—(1) to (3) Cities, Towns and Villages. (4) Ontario Villages. (5) Montreal Island. (6) Cities, Towns and Villages. (7) Villages of Manitoba, Saskatchewan and Alberta. (8) Villages of Quebec. (9) Cities, Towns and Villages. (10) Maritime Provinces by Federal Electoral Districts. (11) Ontario by Federal Electoral Districts. (12) Prairie Provinces by Federal Electoral Districts. (13) Quebec by Federal Electoral Districts. (14) British Columbia by Federal Electoral Districts; Yukon and Northwest Territories. (15) Canada by Provinces. (16) Cities replacing Census Bulletins 1, 2, 3, 5 and 6. (17) Towns replacing Bulletins 1, 2, 3, 5, 6 and 9. *Final Bulletins.*—(I) New Brunswick. (II) Nova Scotia. (III) Manitoba. (IV) Canada by Provinces. (V) Saskatchewan. (VI) Alberta. (VII) Quebec. (VIII) Ontario. (IX) British Columbia. (X) Prince Edward Island. (XI) Rural and Urban Population. (XII) Yukon and Northwest Territories. (XIII) Cities, Towns and Villages in Canada, by Provinces. (XIV) Religions, by Provinces. (XV) Birthplaces, by Provinces. (XVI) Ages, by Provinces. (XVII) Conjugal Condition, by Provinces. (XVIII) School Attendance and Literacy, by Provinces. (XIX) Radio Sets in Canada, 1931. (XX) Population of Canada, 1931, by Provinces, Electoral Districts and Subdistricts. (XXI) Population of Canada, 1931, by Religious Denominations. (XXII) Population of Canada, 1931, by Racial Origins. (XXIII) Immigrants by Years of Arrival in Canada. (XXV) Number and Percentage of Single, Married, Widowed or Divorced of the Total Population, by Sex and Provinces, 1911, 1921, and 1931. (XXVI) Age Distribution by Single Years of Age for Canada, by Provinces, 1931. (XXVII) Immigrant Population Classified by Sex, Country of Birth, Province of Residence, Years of Arrival in Canada and Citizenship of the Foreign Born, 1931. (XXVIII) Gainfully Employed Ten Years of Age and Over Classified According to Occupation and Sex for Cities of 30,000 and Over, 1931. (XXIX) Birthplace of the Population Classified According to Nativity of Parents for Canada and Provinces, 1931. (XXX) Canadians and Other Nationals. (XXXI) Gainfully Employed Ten Years of Age and Over for Canada and Provinces, 1931. (XXXII) Literacy, Language Spoken, and Conjugal Condition of the Population Ten Years of Age and Over, 1931. (XXXIII) Earnings Among Wage-Earners for Canada and Provinces, 1931.

*This report for the year ended Mar. 31, 1919, is now out of print.

Census—

I. CENSUS OF POPULATION AND AGRICULTURE 1931—continued.
Bulletins of the Seventh Census.—continued.

(XXXIV) Ages of the Gainfully Employed Ten Years of Age and Over for Canada and Provinces, 1931. (XXXV) Religious Denominations by Racial Origins, 1931. (XXXVI) Gainfully Employed Ten Years of Age and Over by Industry and Sex for Canada and the Provinces and for Cities of 30,000 and Over, 1931. (XXXVII) Age Distribution by Five-Year Age Groups for Cities, Towns and Villages of 5,000 Population and Over, 1931. (XXXVIII) Population of the Municipal Wards of Montreal City by Quinquennial Age Groups, Conjugal Condition, Birthplace, Racial Origin, Religion, School Attendance and Literacy, by Sex, 1931. (XXXIX) Houses and Dwellings. (XL) Population of the Municipal Wards of the Cities of Toronto, Vancouver, Winnipeg, Hamilton, Quebec and Ottawa by Quinquennial Age Groups, Conjugal Condition, Birthplace, Racial Origin, Religion, School Attendance and Literacy, by Sex, Census of 1931. (XLI) Orientals, Ten Years of Age and Over, Gainfully Employed by Race, Occupation and Sex. in British Columbia, 1931. (XLII) Persons Speaking Gaelic. (XLIII) Blind. (XLIV) Deaf Mutes. (XLV) Racial Origins of Gainfully Occupied, Ten years of Age and Over for Canada and the Provinces. UNEMPLOYMENT AMONG WAGE-EARNERS.—(I) Saint John, N.B.; (II) Winnipeg, Man.; (III) Kitchener, Ont.; (IV) Ottawa, Ont.; (V) Vancouver, B.C.; (VI) Hamilton, Ont.; (VII) Calgary, Alta.; (VIII) Toronto, Ont.; (IX) Montreal, Que.

(2) CENSUS OF INSTITUTIONS:—*Preliminary Bulletins.*—(1) Mental Institutions. (2) Directory of Hospitals. (3) Penitentiaries. (4) Charitable and Benevolent Institutions. (5) Reformative and Corrective Institutions. (6) Annual Report of Mental Institutions, 1932. (7) Annual Report on Hospitals, 1932. (8) Directory of Hospitals, 1933.

(3) AGRICULTURE:—*Preliminary Bulletins.*—(1) Number of Occupied Farms, by Counties or Census Divisions, 1931 and 1921; and the Number of Vacant or Abandoned Farms, 1931. Preliminary Acreage:—(1) Prince Edward Island; (2) New Brunswick; (3) Saskatchewan; (4) Manitoba; (5) British Columbia; (6) Ontario; (7) Nova Scotia; (8) Quebec; (9) Alberta; (10) Canada. Live Stock by Counties:—(11) Prince Edward Island; (12) Nova Scotia; (13) New Brunswick; (14) Ontario Preliminary Acreage, by Counties. (15) Manitoba Live Stock, by Census Divisions. (16) New Brunswick Preliminary Acreage, by Counties. (17) Alberta Live Stock, by Census Divisions. (18) Saskatchewan Live Stock, by Census Divisions. (19) British Columbia Live Stock, by Federal Electoral Districts. (20) Quebec Live Stock, by Counties. (21) Ontario Live Stock, by Counties. Farm Holdings, by Size, for Provinces, Counties or Census Divisions. Farm Facilities, by Provinces. Total Number of Farms, Farm Tenure, Farm Acreage, Farm Values, Mortgage Debt and Farm Expenses, by Provinces. Farms Reporting Live Stock, by Kinds and Total Number of Animals Reported for Each Kind. Area and Yield of Field Crops, 1930 and 1920:—(22) Prince Edward Island; (23) Nova Scotia; (24) New Brunswick; (25) Ontario; (26) Quebec. Live Stock on Farms by Provinces. Tenure of Farm Lands, by Provinces, Counties or Census Divisions. Number of Farm Workers, Weeks and Cost of Hired Labour, 1930. Fruit Trees on Farms, by Provinces, 1931 and 1921. Vegetables:—Area in 1931 and Area, Production and Value in 1930, by Provinces. *Final Bulletins.*—ANIMAL PRODUCTS ON FARMS, BY COUNTIES:—(I) Prince Edward Island; (II) Nova Scotia; (III) New Brunswick; (IV) Manitoba; (V) Saskatchewan; (VI) Alberta; (VII) Ontario; (VIII) Quebec; (IX) British Columbia. LIVE STOCK ON FARMS, BY COUNTIES:—(X) Prince Edward Island; (XI) Nova Scotia; (XII) New Brunswick; (XIII) Manitoba; (XIV) Saskatchewan; (XV) Alberta; (XVI) British Columbia; (XVII) Ontario. (XVIII) Live Stock on Farms by Counties, Quebec. (XIX) Tenure, Farm Values, Farm Facilities and Mortgage Debt, 1931, and Farm Expenses for 1930, by Counties or Census Divisions. (XX) Stock Sold Alive, Stock Slaughtered, Young Animals Raised, 1930, and Pure-Bred Live Stock on Farms, 1931, by Counties or Census Divisions. (XXI) Pure-Bred Live Stock on Farms and Elsewhere, 1931. (XXII) Fruit Trees, 1931, Maple Products, 1931, Fruit Production and Value, 1930. (XXIII) Greenhouse and Hothouse Establishments on Farms and Elsewhere, by Provinces, 1931, 1921. (XXIV) Forest Products of Farms, by Counties or Census Divisions, 1930. (XXV) Condition of Farm Land, by Counties or Census Divisions, 1931. (XXVI) Area of Field Crops, by Counties or Census Divisions, 1931.

Reports of the Seventh Census of Canada, 1931, as follows:—

Vol. IV. Analysis—Cross-classified by birthplace, conjugal condition, immigration, naturalization and citizenship, racial origin, religion, language, literacy, illiteracy, school attendance. *Price, Cloth $1, Paper 75 cents.*

Vol. VI. Unemployment—Classified by industry, occupation, cause, age, sex, conjugal condition, period of idleness, birthplace, racial origin, immigration and year of arrival. *Price, Cloth $1, Paper 75 cents.*

Agriculture:—

Prince Edward Island—Farm population, areas, tenure, values, facilities and live stock; value of field crops, vegetables, fruits and forest products. *Price, 25 cents.*

Nova Scotia—Farm population, areas, tenure, values, facilities and live stock; value of field crops, vegetables, fruits and forest products. *Price, 25 cents.*

New Brunswick—Farm population, areas, tenure, values, facilities and live stock; value of field crops, vegetables, fruits and forest products. *Price, 25 cents.*

II. Census of Population and Agriculture, 1921.

Bulletins of the Sixth Census of Canada, 1921, as follows:—

(1) Population:—*(a)* Population of Canada, 1921, by Provinces, Electoral Districts, Cities, Towns, etc. *(b)* Religions of the People, 1921. *(c)* Origins of the People, 1921. *(d)* Dwellings and Families, 1921. *(e)* Birthplaces of the People, 1921. *(f)* Citizenship of the Foreign Born, 1921. *(g)* Year of Immigration, 1921. *(h)* Ages of the People, 1921. *(i)* Conjugal Condition of the People, 1921. *(j)* Language Spoken and Mother Tongue, 1921. *(k)* Literacy, 1921. *(l)* School Attendance, 1921. *(m)* Occupations, 1921. *(n)* Children in Gainful Occupations, 1921. Also bulletins on population by provinces as follows: *(a)* Population of Nova Scotia—Electoral Districts, etc. *(b)* Population of Prince Edward Island—Electoral Districts, etc. *(c)* Population of New Brunswick—Electoral Districts, etc. *(d)* Population of Quebec—Electoral Districts, etc. *(e)* Population of Ontario—Electoral Districts, etc. *(f)* Population of Manitoba—Electoral Districts, etc. *(g)* Population of Saskatchewan—Electoral Districts, etc. *(h)* Population of Alberta—Electoral Districts, etc. *(i)* Population of British Columbia—Electoral Districts, etc.

(2) Agriculture:—*(a)* Field Crops of Prairie Provinces, 1921. *(b)* Agriculture of Canada—General Summary. *(c)* Pure-Bred Domestic Animals, 1921. *(d)* Agriculture of Nova Scotia, 1921. *(e)* Agriculture of Prince Edward Island, 1921. *(f)* Agriculture of New Brunswick, 1921. *(g)* Agriculture of Quebec, 1921. *(h)* Agriculture of Ontario, 1921. *(i)* Agriculture of Manitoba, 1921. *(j)* Agriculture of Saskatchewan, 1921. *(k)* Agriculture of Alberta, 1921. *(l)* Agriculture of British Columbia, 1921.

Reports of the Sixth Census of Canada, 1921, as follows:—

Vol. I. Introduction, number, sex and distribution, racial origins, religions.

Vol. II. Ages, conjugal condition, birthplace, birthplace of parents, year of immigration and naturalization, language spoken and mother tongue, literacy, school attendance, blindness and deaf-mutism. *(Out of print.)*

Vol. III. Families, dwellings, ownership of homes, rentals, earnings. *(Out of print.)*

Vol. IV. Occupations and Employment.

Vol. V. Agriculture—Farm holdings by size, tenure, value, etc.; farm products; field crops; vegetables; fruits; forest products; live stock; animal products; statistics of operators.

Census Monographs, 1921.

Illiteracy and School Attendance in Canada.

Origin, Birthplace, Nationality and Language of the Canadian People.

III. Census of Population and Agriculture of the Prairie Provinces, 1926.

Report of the Census of Population and Agriculture of the Prairie Provinces, 1926.

Census of Manitoba—Population and Agriculture.

Census of Saskatchewan—Population and Agriculture.

Census of Alberta—Population and Agriculture.

Preliminary Bulletins as follows: *(a)* Population of Manitoba—Electoral Districts, etc. *(b)* Population of Saskatchewan—Electoral Districts, etc. *(c)* Population of Alberta—Electoral Districts, etc. *(d)* Animals on Farms in the Prairie Provinces, 1926. *(e)* Farm Lands and Crops in the Prairie Provinces, 1926.

POPULATION—concluded.

Census—

IV. Intercensal Estimates of Population.

Births, Deaths and Marriages—

V. Vital Statistics.

Annual Report on Vital Statistics of Canada by Provinces and Municipalities, *Price, $1;* Preliminary Annual Report on Vital Statistics of Canada; Preliminary Quarterly Report on Vital Statistics of Canada; Monthly Report of Births, Deaths and Marriages registered in Cities; Report of Conference on Vital Statistics, held June 19-20, 1918; Special Report on Contributory Causes of Death, 1926; Order of Birth in the Registration Area of Canada, 1925; Physicians' Pocket Reference to the International List of Causes of Death; Manual of the International List of Causes of Death, Revision of 1929; Special Report on Mortality in Canada from Cerebral Hœmorrhage and Certain Diseases of the Heart, Arteries and Kidneys, 1921-32; Special Report on Mortality in Canada According to Place of Residence, 1930-32; Special Report on Mortality from Tuberculosis in Canada According to Place of Residence, 1930-32; Special Report on Births in Canada According to Place of Residence of Mother, 1930-32; Special Report on Mortality in Canada, 1921-32.

PRODUCTION—

I. General Summary of Production.

Including and differentiating gross and net—(1) Primary Production (agriculture, fishing, furs, forestry and mining) and (2) Secondary Production, or General Manufactures.

II. Agriculture.

(1) Agricultural Production.—

Monthly Bulletin of Agricultural Statistics; *Price $1 per year:* (The official record of current statistical data relating to agriculture. Contains reports on agricultural conditions, prices, weather, etc.—estimates of areas, yields, quality and value of field crops—value of farm lands—wages of farm help—number and values of farm live stock and poultry—statistics of fruit and floriculture—dairying—tobacco—hives and honey—maple syrup and sugar—clover and grass seed—miscellaneous crops—stocks of grain—annual summary of value of agricultural production—index numbers of agricultural prices, yields and values–international agricultural statistics).

Advance Summaries of Agricultural Statistics.

Telegraphic Crop Reports: (Between June 1 and Sept. 1, weekly for the Prairie Provinces and every two weeks for the rest of Canada).

Agricultural Statistics by Counties and Crop Districts, 1922-24 and 1925-29.

Annual Statistics of Fruit and Floriculture: (latest issue, 1933).

Advance Summaries on Fruit Conditions, Yields, etc.

Handbook of Instructions to Crop Correspondents, and Summary of Annual Agricultural Statistics, 1931.

(See also Censuses of Agriculture under "Population".)

(2) Grain and Grain Products—

(a) Annual Report on the Grain Trade of Canada, *Price 50 cents; (b)* Preliminary Report on the Grain Trade of Canada, *Price 25 cents*; *(c)* Monthly Review of the Wheat Situation, *Price $1 per year*; *(d)* Canadian Grain Statistics.—(Weekly report on grain supplies and movements); *(e)* Canadian Milling Statistics.—(Monthly); *(f)* List of Mills with Capacity, (Latest issue, 1934); *(g)* The Grain Situation in the Argentine—(Monthly); *(h)* The Production and Distribution of Canadian Grains and Seeds; (i) Barley, (2) Oats, (3) Rye, (4) Flaxseed.

(3) Live Stock and Animal Products—

(a) Annual Report on Live-Stock and Animal Products Statistics, *Price 25 cents*; *(b)* Monthly Reports on Stocks in Cold Storage (Advance, preliminary and final); *(c)* Monthly Estimates of Creamery Butter Production, by Provinces: *(d)* Annual Estimates of the Consumption of Meats, Butter, Cheese, Eggs and Poultry in Canada.

(4) Other—

Monthly Report on Raw and Refined Sugar. (Visible supply, meltings, shipments, exports and imports.)

III. Furs.

Annual Report of Fur Farms. *Price 25 cents.*

Advance Summary of Statistics of the Production of Raw Furs.

Annual Report on the Production of Raw Furs: (Comprising the pelts taken by trappers and those sold from fur farms).

PRODUCTION—continued.

IV. Fisheries.

Annual Report of Fisheries Statistics. *Price 35 cents.*
Advance Summaries of Fish Caught and Marketed, by Provinces.

V. Forestry.

Annual Summary of the Value, etc., of Forest Production: (Includes operations in the woods for sawmills, shingle mills, pulp and paper mills, etc., production of mining timber, production of poles and cross ties, and farm production—decennial—of firewood, posts, etc.).
[See also Reports on Manufactures of Forestry Products listed under "Manufactures" Section VII, Subsection (5).]

VI. Mineral Production: (Mining and Metallurgy.)

(1) General—

(a) Annual Report on the Mineral Production of Canada, *Price 50 cents; (b)* Preliminary Reports (semi-annual) on the Mineral Production of Canada; *(c)* Monthly Reports on Leading Minerals; *(d)* Preliminary Estimate of Canada's Mineral Production.

(2) Coal—

(a) Annual Report on Coal Statistics for Canada, *Price 25 cents; (b)* Monthly Summary Report on Coal and Coke Statistics for Canada; *(c)* Quarterly Report on Coal and Coke Statistics for Canada, *Price 50 cents per year.*

(3) Annual Bulletins on Mining—

Metals—The Gold-Mining Industry in Canada: (includes alluvial gold mining, auriferous quartz mining, copper-gold-silver mining, and tables showing Canadian and world production of gold). The Silver-Mining Industry in Canada: (includes silver-cobalt-arsenic mining, silver-lead-zinc mining, and tables showing Canadian and world production of arsenic, cobalt, lead, silver, and zinc). The Nickel-Copper Mining, Smelting and Refining Industry: (includes Canadian and world production of nickel). The Copper Mining Industry: (includes Canadian and world production of copper). Metals of the Platinum Group. The Production of Miscellaneous Metals: (includes antimony, beryl, bismuth, cadmium, chromite, lithium, manganese, mercury, molybdenite, radium, selenium, tin, titanium, tungsten). The Non-Ferrous Smelting and Refining Industry.

Non-Metals—Abrasives; Asbestos; Feldspar and Quartz; Gypsum; Iron Oxide; Mica; Natural Gas; Petroleum; Salt; Talc and Soapstone; Miscellaneous Non-Metallic Minerals (includes actinolite, barytes, bituminous sands, fluorspar, graphite, magnesitic-dolomite, magnesium sulphate, bog manganese, mineral waters, peat, phosphate, silica brick, sodium carbonate, sodium sulphate, sulphur—(pyrites).

Structural Materials.—Cement; Clay and Clay Products; Lime; Sand and Gravel; Stone.

[See also Reports on Iron and Steel and their Products, Manufactures of Non-Ferrous Metals, and Chemicals and Allied Products, listed under "Manufactures", Section VII, Subsections (6), (7), (8) and (9).]

VII. Manufactures.

(1) General—General Report on the Manufacturing Industries of Canada, *Price 25 cents.* Geographical Distribution of the Manufacturing Industries of Canada, *Price 20 cents.* Also Reports for the Provinces and Leading Cities; Alphabetical List of Products (annual report); Quantity of Manufacturing Production in Canada, 1923-29; Consumption of Luxuries, (annual report).

(2) Manufactures of Vegetable Products—General Report. Annual Bulletins as follows: *(a)* Coffee, Tea, Spices and Miscellaneous Foods; *(b)* Fruit and Vegetable Preparation (including canning, evaporating and preserving and pickles, sauces, vinegar and cider); *(c)* Flour and Grist-Mill Products; *(d)* Bread and Other Bakery Products; *(e)* Biscuits and Confectionery, Including Cocoa and Chocolate; *(f)* Macaroni and Vermicelli; *(g)* Liquors, Distilled; *(h)* Liquors, Malt; *(i)* Liquors, Vinous; *(j)* Rubber Goods and Rubber Boots and Shoes; *(k)* Prepared Breakfast Foods; *(l)* Sugar Refineries; *(m)* Tobacco Products; *(n)* Linseed and Soya Bean Oil; *(o)* The Canned Foods Industry; *(p)* Ice Cream; *(q)* Pack of Fruits and Vegetables (preliminary); *(r)* Barley and Its Production; *(s)* Mixed Feed Trade in Canada; *(t)* Stocks of Fruits and Vegetables on hand; *(u)* Stocks of Unmanufactured Tobacco on Hand.

PRODUCTION—continued.

VII. MANUFACTURES.—continued.

(3) *Animal Products and Their Manufactures*—Annual Reports and Bulletins as follows: (a) The Dairy Factory Industry, *Price 25 cents;* (b) Slaughtering and Meat Packing and Sausage and Sausage Casings; (c) Leather Tanneries; (d) Miscellaneous Leather Goods, Leather Belting, Boot and Shoe Findings, Leather; (e) Leather Boots and Shoes; (f) Leather Gloves and Mitts; (g) Fur Goods, Fur Dressing. Monthly Report on Boot and Shoe Production. Monthly Report on Concentrated Milk Products.

[See also Reports on Live Stock, etc., listed under "Agriculture".]

(4) *Textile and Allied Industries*—General Report on the Textile Industries of Canada, *Price 50 cents.* Annual Bulletins as follows: (a) Cotton Textiles (cloth, yarn, thread and waste); (b) Woollen Textiles (cloth, yarn, waste, carpets, etc., and woollen goods, n.e.s.); (c) The Silk Industry; (d) Clothing, Men's, Factory; (e) Clothing, Women's, Factory; (f) Hats and Caps; (g) Hosiery and Knitted Goods; (h) Men's Furnishings, n.e.s.; (i) Oiled Clothing and Waterproofs; (j) Cordage, Rope and Twine; (k) Corsets; (l) Cotton and Jute Bags; (m) Dyeing, Cleaning and Laundry Work; (n) Dyeing and Finishing of Textiles; (o) Awnings, Tents and Sails; (p) Production and Consumption of Raw Wool in Canada, 1931; (q) Consumption of Wool, tops and yarns, 1932.

(5) *Manufactures of Forestry Products*—Printed Bilingual Annual Reports: (a) The Lumber Industry; (b) The Pulp and Paper Industry; (c) Wood-Using Industries; (d) Paper-Using Industries. Mimeographed Annual Reports: (a) The Lumber Industry; (b) Lumber Distribution in Canada and the United States (biennial); (c) The Pulp and Paper Industry; (d) Planing Mills, Sash and Door Factories; (e) Hardwood Flooring; (f) Furniture; (g) Boxes, Baskets and Crates; (h) Carriages, Wagons and Materials; (i) Cooperage; (j) Coffins and Caskets; (k) Sporting Goods; (l) Boatbuilding; (m) Lasts, Trees and Shoe Findings; (n) Handles, Spools and Woodturning; (o) Woodenware; (p) Excelsior; (q) Miscellaneous Wood-Using Industries; (r) Printing and Publishing; (s) Printing and Bookbinding; (t) Lithographing; (u) Engraving, Electrotyping and Stereotyping; (v) Trade Composition; (w) Paper Boxes and Bags; (x) Blueprinting; (y) Roofing Paper; (z) Miscellaneous Paper Goods. The Printing Trades [combining (r), (s), (t), (u), (v) and (x)]. Mimeographed Monthly Reports: (a) Asphalt Roofing; (b) Rigid Insulating Board.

(6) *Iron and Steel and Their Products*—Biennial Report, *Price 25 cents.* Annual Bulletins as follows: Preliminary Summary on the Iron and Steel Industry—(a) Primary Iron and Steel; (b) Castings and Forgings; (c) Boilers, Tanks and Engines; (d) Agricultural Implements; (e) Machinery; (f) Automobiles; (g) Automobile Supplies; (h) Railway Rolling Stock; (i) Wire and Wire Goods; (j) Sheet Metal Products; (k) Hardware and Tools; (l) Bridge Building and Structural Steel; (m) Miscellaneous Iron and Steel Products. Commodity Bulletins on the production of pig iron; steel; washing machines; cream separators; warm air furnaces; galvanized sheets; wire nails; wire rope and cable; steel wire; wire fencing; stoves, etc. Monthly Reports: (a) Iron and Steel; (b) Automobile Statistics.

(7) *Manufactures of Non-Ferrous Metals*—Biennial Report, *Price 25 cents.* Annual Bulletins as follows: Preliminary Summary on Manufactures of Non-Ferrous Metals. (a) Aluminium Products; (b) Brass and Copper Products; (c) Lead, Tin and Zinc Products; (d) Jewellery and Silverware; (e) Electrical Apparatus and Supplies; (f) Miscellaneous Non-Ferrous Metal Goods. Quarterly Reports on production and sales of radio sets and sales of storage batteries. Commodity Bulletins on the production of batteries; silverware; vacuum cleaners; electric motors and generators; electric transformers; incandescent lamps, etc.

(8) *Manufactures of the Non-Metallic Minerals*—Biennial Report, *Price 25 cents.* Annual Bulletins as follows: Preliminary Summary on Manufactures of Non-Metallic Minerals—(a) Aerated Waters; (b) Asbestos Products; (c) Cement; (d) Cement Products; (e) Coke and Gas; (f) Glass (blown, cut and ornamental, etc.); (g) Lime; (h) Petroleum Products; (i) Products from Domestic Clays; (j) Products from Imported Clays; (k) Salt; (l) Sand-Lime Brick; (m) Dressed Stone; (n) Artificial Abrasives and Abrasive Products; (o) Miscellaneous Non-Metallic Mineral Products (including carbon electrodes—gypsum products—mica products—non-metallic minerals, n.e.s.). Also Special Report on the consumption of coke in Canada. Monthly Report on Coke Statistics.

(9) *Chemicals and Allied Products*—Biennial Report, *Price 25 cents.* Annual Bulletins as follows: Preliminary Summary on Chemicals and Allied Products—(a) Coal Tar Distillation; (b) Acids, Alkalies and Salts; (c) Compressed Gases; (d) Explosives, Ammunition and Fireworks; (e) Fertilizers; (f) Medicinal and Pharmaceutical Preparations; (g) Paints, Pigments and Varnishes; (h) Soaps, Cleaning Preparations

PRODUCTION—concluded.

VII. MANUFACTURES—concluded.

and Washing Compounds; *(i)* Toilet Preparations *(j)* Inks; *(k)* Adhesives; *(l)* Polishes and Dressings; *(m)* Wood Distillation; *(n)* Miscellaneous Chemical Products, (including boiler compounds—cellulose products—insecticides—sweeping compounds—disinfectants—matches—dyes and colours—chemical products, n.e.s.). Special Report on the Fertilizer Trade in Canada. Commodity Bulletins on Sulphuric Acid, Ammonium Sulphate, etc. Special Report—Directory of Chemical Industries in Canada, as of July 1, 1932. Special Report on the Consumption of Chemicals in Municipal Waterworks in Canada, 1931 and 1932.

(10) Miscellaneous Manufactures—General Report. Annual Bulletins as follows: *(a)* Brooms, Brushes and Mops; *(b)* Musical Instruments (including pianos, organs and phonographs) and Musical Instrument Materials and Parts; *(c)* Buttons; *(d)* Bed Springs and Mattresses.

NOTE.—For statistics of water power and central electric stations, see under heading "Public Utilities".

VIII. CONSTRUCTION—
Building Permits—Monthly and Annual Record.

EXTERNAL TRADE (IMPORTS AND EXPORTS)—

(1) Annual Report of the Trade of Canada, for the fiscal year ended Mar. 31 (showing summary historical tables, analyses of current trends, detailed tables by items, group analyses according to component material, origin and degree of manufacture, and purpose, and comparisons of the volume of trade). *Price $3.*

(2) Condensed Preliminary Report of the Trade of Canada, for the fiscal year ended Mar. 31. *Price 25 cents.*

(3) Annual Report of the Trade of Canada for the calendar year. *Price 50 cents.* (Free to subscribers to Quarterly Trade Report.)

(4) Review of Canada's Foreign Trade during the calendar year.

(5) Quarterly Report of the Trade of Canada (showing statistics of imports and exports by months and cumulative quarters). *Price $2 per year.*

(6) Monthly Summary of the Trade of Canada (for latest month and latest 12 months). *Price $1 per year.*

(7) Monthly Bulletins on Trade Statistics as follows: *(a)* Abstract of Imports, Exports, and Duty Collected (by latest month, accrued period, and latest 12 months); *(b)* Summary of Canada's Imports (for latest month); *(c)* Summary of Canada's Exports (for latest month); *(d)* Canada's Imports from Principal Countries (for latest month and accrued period); *(e)* Canada's Domestic Exports to Principal Countries (for latest month and accrued period).

(8) Monthly Commodity Bulletins: *(a)* Imports and Exports of Asbestos; *(b)* Imports and Exports of Coffee and Tea; *(c)* Imports of Farm Implements and Machinery; *(d)* Exports of Farm Implements and Machinery; *(e)* Imports and Exports of Fertilizers; *(f)* Imports and Exports of Footwear (except rubber); *(g)* Exports of Grain and Flour; *(h)* Imports and Exports of Hides and Skins; *(i)* Imports of Lumber; *(j)* Exports of Lumber; *(k)* Imports of Meats, Lard and Sausage Casings; *(l)* Exports of Meats, Lard and Sausage Casings; *(m)* Imports of Milk, Milk Products and Eggs; *(n)* Exports of Milk, Milk Products and Eggs; *(o)* Imports of Non-Ferrous Metals and Smelter Products; *(p)* Exports of Non-Ferrous Metals and Smelter Products; *(q)* Imports of Paints and Varnishes; *(r)* Exports of Paints and Varnishes; *(s)* Imports of Petroleum and Products; *(t)* Exports of Petroleum and Products; *(u)* Imports and Exports of Pipes, Tubes and Fittings; *(v)* Imports of Pulpwood, Pulp and Paper; *(w)* Exports of Pulpwood, Pulp and Paper; *(x)* Imports of Rubber and Products; *(y)* Exports of Rubber and Products; *(z)* Imports of Sheet Metal Products; *(aa)* Imports and Exports of Vegetable Oils; *(bb)* Imports of Vehicles (of iron). *Price $1 per year* for imports and exports of one commodity; *$5 per year* for all the above commodity bulletins.

(9) Special Trade Reports: *(a)* Trade of Canada with Pacific Countries, (1932); *(b)* Canada-Belgium Trade, 1933; *(c)* Canada's Imports of Commodities not produced in Canada, 1929-1933; *(d)* Canada-Austria Trade, 1934; *(e)* Canada-Germany Trade. 1934.

INTERNAL TRADE—

1. Retail and Wholesale Trade:

Census of Merchandising and Service Establishments, 1931:—
Statistics of Retail and Wholesale Trade in 1930.
Preliminary Bulletins (mimeographed)—*(a)* Retail Trade of cities with a population of 10,000 and over, showing number of establishments, kinds of business, types of operation, employees, wages, sales, etc.; *(b)* Wholesale Trade of cities with a population of 20,000 and over.
Final Reports (mimeographed)—*(a)* Retail Merchandise Trade in Canada: *(b)* Retail Services in Canada; *(c)* Wholesale Trade in Canada; *(d)* Summary of Retail Facts; Credit and Commodity Sales; Size of Business; Operating Expenses by Provinces; *(e)* Retail Sales by Commodities; *(f)* Mail Order Sales; *(g)* Food Retailing; *(h)* Drug Retailing; *(i)* Retail Trade in Rural and Urban Areas; *(j)* Wholesale Trade by Provinces; *(k)* Operating Results of Wholesale Establishments, Showing Operating Expenses, Size of Business, Number of Units, etc.; *(l)* Commodity Sales by Wholesale Establishments; *(m)* Chain Stores, Food Chains, Variety Chains, Drug Chains, Filling Station Chains, Lumber and Building Material Chains; *(n)* Hotel Operations, by Provinces; *(o)* Hotel Operations in Canada; *(p)* Co-operative Marketing and Purchasing Associations; *(q)* Motor-Vehicle Transportation; *(r)* Distribution of Sales of Coal Mines; *(s)* Distribution of Sales of Manufacturing Establishments.
Final Reports (Printed)—Retail Trade by Provinces, showing number of establishments, kinds of business, types of operation, full-time and part-time employees and wages, operating expenses, size of business, credit sales, forms of organization, capital invested, and sales by commodities; details for cities with populations of 30,000 and over by kinds of business and types of operation, and by kinds of business for counties or census divisions and incorporated places with populations of 1,000 and over. Reports now available for Nova Scotia, *25 cents;* Ontario, *50 cents;* Quebec, *50 cents;* reports for other provinces, summary for Canada and wholesale trade for Canada and the provinces in process of compilation.
Annual Reports on Retail and Wholesale Trade—Reports for 1933 as follows: *(a)* Chain Stores; *(b)* Retail Merchandise Trade by Provinces and for Canada; *(c)* Motion Picture Statistics; *(d)* Wholesale Trade in Canada and the Provinces.

Monthly Reports—Changes in the Value of Retail Sales; New Motor Vehicle Sales for Canada and the Provinces; Financing of Automobile Sales.

2. Prices Statistics.

Annual Reports:—
1913-1933 Report on Prices and Price Indexes in Canada, in the British Empire, and in Foreign Countries (dealing with exchange and currency, security prices—common stocks, preferred stocks, mining stocks—bond yields, U.S. common stocks, prices and index numbers of street car rates, hospital charges, manufactured and fuel gas, electric light rates, telephone rates,—and import and export valuations). *Price 50 cents.* Preliminary Summary of Price Movements, 1934.

Monthly Reports:—
Index Numbers of Wholesale and Retail Prices in Canada, British Empire and Foreign Countries—Security Prices—Exchange Rates.

Weekly Reports:—
Index Numbers of Wholesale Prices; Index Numbers of Common Stock Prices; Index Numbers of Mining Stock Prices.

Special Reports:—
Index Numbers of Wholesale Prices of Canadian Farm Products, 1890-1933 (with historical tables).

3. Capital Movements.

Annual Records and Estimates of Capital Investments by Foreigners in Canada and of Canadian Investments in Foreign Countries.

4. Records of Branch Plant Development in Canada.

Lists of New Concerns Locating in Canada in Recent Years. Bulletin on Branch and Subsidiary Industries in Canada.

5. Balance of International Payments.

Compilation of Canada's Annual Balance of Payments. Estimation of the Invisible Items in Canada's Trade Balance (Receipts and Payments for Interest, Freight, Insurance, Non-Commercial Remittances, Government Expenditures, Capital of Immigrants and Emigrants, etc.).

TRANSPORTATION, COMMUNICATIONS AND PUBLIC UTILITIES—

1. *Railways and Tramways.*—Annual Reports: *(a)* Railway Statistics. *Price 50 cents.* *(b)* Electric Railway Statistics. *Price 25 cents.* *(c)* Location of Railway Mileages. *(d)* Summary of Monthly Railway Traffic Report. Monthly Reports: *(a)* Railway Revenues, Expenses, Incomes and Operating Statistics. *(b)* Freight Traffic of Railways. Weekly Reports: Car Loadings of Revenue Freight.
2. *Express.*—Annual Report on Express Statistics.
3. *Telegraphs.*—Annual Report on Telegraph Statistics.
4. *Telephones.*—Annual Report on Telephone Statistics.
5. *Water Transportation.*—*(a)* Annual Report on Canal Statistics. *Price 25 cents.* *(b)* Monthly Report on Canal Statistics.
6. *Electrical Stations.*—*(a)* Annual Report on Central Electric Stations in Canada; *(b)* Report on Index Numbers of Electric Light Rates; *(c)* Report on use of Electric Energy in Industries; *(d)* Monthly Report on Electric Energy Generated.
7. *Motor Vehicles.*—*(a)* Annual Report on Motor Vehicle Registrations; *(b)* Highways—Annual Report on Highway Mileage Open for Traffic, Construction and Expenditures on Construction and Maintenance.

FINANCE—

Provincial Public Finance.

1. *Financial Statistics of Provincial Governments.*—
   (a) 1921 to 1926. (1923 and 1924 out of print.) *(b)* 1927 to 1931. Special Summary statements. (Out of print.) *(c)* 1927 to 1929. Special analysis for Statistical Conference. (Out of print.) *(d)* 1932 and 1933. *(e)* Bonded Indebtedness of Provinces. Special analysis, 1916 to 1931.

Municipal Finance.

1. *Statistics of Cities and Towns.*—
   (a) Urban Municipalities Having a Population of 10,000 and Over, 1919 and 1920. *(b)* 1925 to 1932. (1925 and 1928 out of print.) *(c)* Urban Municipalities Having Populations of 3,000 to 10,000, 1919. *(d)* Urban Municipalities Having Populations of 1,000 to 3,000, 1920. *(e)* Urban Municipalities Having Populations of 5,000 and Over, and 1,000 to 5,000, 1922.
2. *Assessment Valuations. Analysis by Classes of Municipalities.*—
   (a) 1919 to 1923. *(b)* 1924 to 1932.
3. *Bonded Indebtedness by Classes of Urban and Rural Municipalities.*—
   (a) 1919 to 1932. (1919-23 out of print.)

Civil Service Statistics of the Dominion Government.

(a) Numbers of Personnel and Salary Expenditure for the Month of January, 1912-1924. (Special Report—out of print.) *(b)* Numbers of Personnel and Salary Expenditures by Months, *Price 25 cents*—(1) 1925-1931. (2) 1932-1934.

JUSTICE—

1. *Criminal Statistics.*—Annual Report. *Price 50 cents.* (Covering convictions, sentences, prison statistics, police statistics, pardons, commutations and executions.)
2. *Juvenile Delinquency.*—Annual Bulletin. *Price 10 cents.*

EDUCATION—

(1) Annual Survey of Education in Canada. (Published yearly since 1921.) Includes the following: *(a)* Provincially-controlled schools; *(b)* Universities and colleges; *(c)* Private schools; *(d)* Schools for Indians; *(e)* Directory of educational organizations, societies and periodicals, of provincial or Dominion scope; *(f)* Bibliography of Canadian studies in education, since 1929.

EDUCATION—concluded.

(2) Survey of Canadian Libraries. (Biennial, 1931, 1933.)

(3) Cost of Education. (A series of bulletins, 1934.)

(4) Civic Playgrounds, 1934: School Playgrounds in Canadian Cities, 1934.

(5) Illiteracy and School Attendance in Canada. (A study of the Census of 1921 with supplementary data. Under revision on basis of the Census of 1931.)

(6) Report of Dominion-Provincial Conference on Education Statistics. (Held October, 1920.)

GENERAL—

(1) National Wealth and Income.—Estimates of the National Wealth of Canada, by Provinces, Industries, etc.: Income Assessed for Income War Tax: The National Income of Canada.

(2) Employment.—Monthly and Annual Reports on Employment. (With Index Numbers of Employment by Economic Areas, Cities and Industries.)

(3) Commercial Failures.—Monthly and Annual Reports.

(4) Bank Debits.—Monthly and Annual Reports of Bank Debits to Individual Accounts at the Clearing-House Centres of Canada.

(5) Business Statistics.—The Monthly Review of Business Statistics, *Price $1 per year.* (A statistical summary with charts and text, of current economic conditions in Canada.): Special Supplements—Twelve Years of the Economic Statistics of Canada, 1919-30; Monthly Indexes of the Physical Volume of Business in Canada, 1919-32; Original Monthly Statistics of Chief Economic Importance, 1919-33, *Price 25 cents*; Business Conditions in Canada in Elapsed Months of Current Year. (Monthly.)

(6) Divorce.—Annual Report.

(7) Liquor Control.—Annual Report on the Control and Sale of Liquor.

(8) Tourist Trade.—Annual Report.

(9) The Maritime Provinces in Their Relation to the National Economy of Canada.—A statistical study of their social and economic condition since Confederation.

(10) The Prairie Provinces in Their Relation to the National Economy of Canada.—A statistical study of their social and economic condition in the twentieth century.

(11) The Canada Year Book.—The official statistical annual of the physiography, resources, history, institutions and social and economic conditions of the Dominion, with a statistical summary of the progress of Canada, maps, diagrams, etc. *Price $1.50.*
Contents: I. Physical Characteristics of Canada (geographical features; geological formation; seismology; flora; fauna; natural resources; climate and meteorology). II. History and Chronology. III. Constitution and Government (constitution and general government of Canada; provincial and local government in Canada; parliamentary representation in Canada). IV. Population (growth and distribution). V. Vital Statistics. VI. Immigration. VII. Survey of Production. VIII. Agriculture. IX. Forestry. X. Fur Trade. XI. Fisheries. XII. Mines and Minerals. XIII. Water Power. XIV. Manufactures. XV. Construction. XVI. External Trade. XVII. Internal Trade. XVIII. Transportation and Communications (government control over transportation and communications; steam railways; electric railways; express companies; roads and highways; motor vehicles; air navigation; canals; shipping and navigation; telegraphs; telephones; radio; post office). XIX. Labour and Wages. XX. Prices. XXI. Public Finance (Dominion public finance; provincial public finance; municipal public finance; national wealth and income). XXII. Currency and Banking; Loan and Trust Companies. XXIII. Insurance (and Government annuities). XXIV. Commercial Failures. XXV. Education. XXVI. Public Health and Benevolence. XXVII. Judicial and Penitentiary Statistics. XXVIII. Miscellaneous Administration (public lands; national defence; public works, etc.). XXIX. Sources of Official Statistical and Other Information Relative to Canada. XXX. The Annual Register (Dominion legislation; principal events of the year; extracts from the *Canada Gazette, re* official appointments, commissions, etc.). Appendices.

(Issues of the Canada Year Book for 1921, 1924, 1926, 1930, 1931 and 1932 are available.)

(12) Canada.—The Official Handbook of Present Conditions and Recent Progress. (Published annually. *Price 25 cents.*)

(13) The Daily News Bulletin.—(A mimeographed report summarizing the chief items of statistical importance in news-letter form and listing the reports issued each day by the Bureau of Statistics. *Price $1.50 per year.*

GENERAL—concluded.

(14) The Weekly News Bulletin.—(A mimeographed report summarizing the chief items of statistical importance in news-letter form and listing the reports issued each week by the Bureau of Statistics.) *Price $1 per year.*

N.B.—The complete service of all publications issued by the Bureau (with the exception of news bulletins) may be obtained for a special rate of $15 per annum.

Section 2.—Acts Administered by Dominion Departments.

List of the Principal Acts of Parliament Administered by Departments of the Government of the Dominion of Canada, as Compiled from Information Supplied by the respective Departments.

(Numbers within parentheses, unless otherwise indicated, denote chapters of the Revised Statutes of Canada, 1927—R.S.C., 1927.)

Note.—Copies of individual Acts of Parliament may be obtained from the King's Printer at prices of from 10 cents to $1 per copy according to number of pages.

Agriculture.—Experimental Farm Stations (61); Fruit and Honey (24-25 Geo. V, c. 18); Dairy Industry (45); Cold Storage (25); Seeds (185); Feeding Stuffs (67); Live Stock Pedigree (121); Live Stock and Live Stock Products (120); Animal Contagious Diseases (6); Meat and Canned Foods (77); Destructive Insect and Pest (47); Fertilizers (69); Root Vegetables (181); Section 235, Criminal Code (Race Track Betting) (36); Inspection and Sale (100); Maple Sugar Industry (20-21 Geo. V, c. 30); Agricultural Pests Control (5); Natural Products Marketing (24-25 Geo. V, c. 57).

Auditor General.—Consolidated Revenue and Audit (21-22 Geo. V, c. 27).

Civil Service Commission.—Civil Service (22), as amended 1932, c. 40.

External Affairs.—The functions and duties of this Department are defined by the Department of External Affairs Act (65) and by the International Boundary Waters Treaty Act, 1911 (1-2 Geo. V, c. 28), as amended by the Statute of April 3, 1914 (4 Geo. V, c. 5).

Finance.—Appropriation; Bank (24-25 Geo. V, c. 24); Bank of Canada (24-25 Geo. V, c. 43); Bills of Exchange (16) and (24-25 Geo. V, c. 17); Board of Audit (10); Canadian Farm Loan (66) and (24-25 Geo. V, c. 46); Civil Service Superannuation (24); Consolidated Revenue and Audit (21-22 Geo. V, c. 27); Currency (40); Dept. of Finance and Treasury Board (71) and (21-22 Geo. V, c. 48); Dominion Notes (41) and (23-24 Geo. V, c. 12 and 24-25 Geo. V, c. 34); Farmers' Creditors Arrangement (24-25 Geo. V, c. 53); Federal District Commission (17 Geo. V, c. 55); Finance (70) and (24-25 Geo. V, c. 35); Interest (102); Penny Bank (13); Provincial Subsidies (192); Quebec Savings Banks (14) and (24-25 Geo. V, c. 39); Special War Revenue (179) and (23-24 Geo. V, c. 50; 24-25 Geo. V, c. 42)—(in part); Gold Export (22-23 Geo. V, c. 33); Tariff Board (21-22 Geo. V, c. 55).

Fisheries.—Fisheries (73, as amended 1932, c. 42 and 1934, c. 6); Fish Inspection (72); Meat and Canned Foods (77, so far as it relates to fish and shellfish); Deep-sea Fisheries (74); Northern Pacific Halibut Fishery Protection (75); Pelagic Sealing (153); Customs and Fisheries Protection (43, in part); Navigable Waters Protection (140, in part). The Biological Board Act (18, as amended 1930, c. 4), is also administered by the Minister of Fisheries.

Immigration.—The Immigration Act and Regulations, 1910 (93); the Chinese Immigration Act and Regulations, 1923 (95).

Indian Affairs.—Indian (98).

Insurance.—Department of Insurance (22-23 Geo. V, c. 45); Canadian and British Insurance Companies, 1932 (22-23 Geo. V, c. 46, as amended 1932-33, c. 32 and 1934, cc. 27, 45); Foreign Insurance Companies, 1932 (22-23 Geo. V, c. 47 as amended 1934, c. 6); Loan Companies (28); Trust Companies (29).

Interior.—Forest Reserves and Parks (78); Seed Grain (87); Seed Grain Sureties (88); Department of the Interior (103); Irrigation (104); Dominion Lands (113); Public Lands Grants (114); Ordnance and Admiralty Lands (115); Railway Belt (116); Dominion Lands Survey (117); Land Titles (118); Manitoba Supplementary Provisions (124); Migratory Birds Convention (130); Northwest Game (141); Northwest Territories (142); Reclamation (175); Saskatchewan and Alberta Roads (180); Soldier Settlement (188); Dominion Water Power (210); Railway Belt Water (211); Yukon (215); Yukon Placer Mining (216); Yukon Quartz Mining (217); Lac Seul Conservation (18-19 Geo. V, c. 32); National Parks (20-21, Geo. V, c. 33); Alberta Natural Resources (20-21 Geo. V, c. 3); Manitoba Natural Resources (20-21 Geo. V, c. 29); Railway Belt and Peace River Block (20-21 Geo. V, c. 37); Saskatchewan Natural Resources (20-21 Geo. V, c. 41); Refunds—Natural Resources—(22-23 Geo. V, c. 35).

Justice.—Department of Justice (106); Solicitor-General's (107); Northwest Territories (142); Yukon (215); Royal Canadian Mounted Police (160); Judges (105); Supreme Court (35); Exchequer Court (34); Admiralty (33); Petition of Right (158); Criminal Code (36); Penitentiary (154); Prisons and Reformatories (163); Identification of Criminals (38); Ticket of Leave (197); Fugitive Offenders (81); Extradition (37); Juvenile Delinquents (108).

King's Printer and Controller of Stationery.—Public Printing and Stationery (162); The Publication of Statutes (2).

Labour.—Labour Department (111); Conciliation and Labour (110); Industrial Disputes Investigation (112); Fair Wages Resolution of the House of Commons, 1900; Employment Office Co-ordination (57); Technical Education (193), as amended 1934, c. 9; Vocational Education (21-22 Geo. V, c. 59); Government Annuities (7 as amended by 21-22 Geo. V, c. 33); Combines Investigation (26); Old Age Pensions (156 as amended by 21-22 Geo. V, c. 42); White Phosphorus Matches (128); Fair Wages and Eight-Hour Day (20-21 Geo. V, c. 20); Unemployment Relief, 1930 (21 Geo. V, c. 1); Unemployment and Farm Relief, 1931 (21-22 Geo. V, c. 58); Relief, 1932 (22-23 Geo. V, c. 36); Relief, 1933 (23-24 Geo. V, c. 18); Relief, 1934 (24-25 Geo. V, c. 15).

Marine.—Government Harbours, Piers and Breakwaters (89); Shipping of Live Stock (122); Department of Marine (20-21 Geo. V, c. 31); Maritime Conventions (126); Navigable Waters' Protection (140); Quebec Harbour and River Police (169); Canada Shipping (186); Radiotelegraph (195); Government Vessels Discipline (203); Belleville Harbour Commission (1889, c. 35); Halifax Harbour Commission (1927, c. 58); Hamilton Harbour Commission (1912, c. 98); Montreal Harbour Commission (1894, c. 48; 1909, c. 24; 1912, c. 35; 1913, c. 32; 1914, c. 42); North Fraser Harbour Commission (1913, c. 162); New Westminster Harbour Commission (1913, c. 158); Quebec Harbour Commission (1899, c. 34, 1905, c. 33); Saint John, N.B., Harbour Commission (1927, c. 67); Three Rivers, Que., Harbour Commission (1923, c. 71); Trenton, Ont., Harbour Commission (1922, c. 50); Toronto Harbour Commission (1911, c. 26); Vancouver Harbour Commission (1913, c. 54); Winnipeg and St. Boniface Harbour Commission (1912, c. 55); Chicoutimi Harbour Commission (1926, c. 6).

Mines.—Geology and Mines (83); Explosives (62); Domestic Fuel (17 Geo. V, c. 52).

National Defence.—Department of National Defence (136); Naval Service (139); Naval Discipline; Militia (132); Militia Pension (133); Royal Military College (18-19 Geo. V, c. 7); S.s. 85 and 86 Criminal Code; Army; Regimental Debts; Aeronautics (3); Air Force; Visiting Forces, British Commonwealth, 1933 (23-24 Geo. V, c. 21).

National Revenue.—Customs Tariff (44); Customs (42); Canada Shipping (in part) (186); Animal Contagious Diseases (in part) (6); Destructive Insect and Pest (in part) (47); Export (63); Copyright (in part) (32); Petroleum and Naphtha (159); Excise (60); Special War Revenue, 1915 (179); Income War Tax, 1917 (97); Agricultural Pests Control (in part) (5); Customs and Fisheries Protection (in part) (43); Explosives (in part) (62).

Pensions and National Health.—*Pensions*—Department of Pensions and National Health (Part I) (18-19 Geo. V, c. 39); War Veterans' Allowance (20-21 Geo. V, c. 48); Pension (157 and Amendments); Returned Soldiers' Insurance (10-11 Geo. V, c. 54, and Amendments). The two latter Acts are adjudicated upon by the Canadian Pension Commission. *National Health.*—Department of Pensions and National Health (Part II) (18-19 Geo. V, c. 39); Quarantine (168); Public Works Health (91); Leprosy (119); Canada Shipping (Sick and Distressed Mariners) (24-25 Geo. V, c. 44); Proprietary or Patent Medicine (151); Opium and Narcotic Drug (19-20 Geo. V, c. 49 and Amendments); Food and Drugs (including Honey) (76 and Amendments).

Post Office.—Post Office (161); Special War Revenue (in part) (179).

Public Works.—Public Works (166); Government Harbours and Piers (89, sec. 5); Navigable Waters Protection (140); Telegraphs (194); Dry Dock Subsidies (191); Act to authorize the payment of a subsidy to the Collingwood Shipbuilding Co., Ltd. (2 Geo. V, 1912, c. 17); Government Works Toll Act (167); Act to incorporate the National Gallery of Canada (3-4 George V, 1913, c. 33); Act to authorize the payment of a subsidy to the Western Dry Dock and Shipbuilding Co., Ltd. (3-4 Geo. V, 1913, c. 57); Act to extend an Agreement for one year between His Majesty the King and the Corporation of the City of Ottawa (22-23 Geo. V, c. 11); Ferries (68), transferred by Order in Council, June 3, 1918, for administration by Public Works Department; Act Regulating Vehicular Traffic on Dominion Property (20-21 Geo. V, c. 47); Act to extend an Agreement for one year between His Majesty the King and the Corporation of the City of Ottawa (24-25 Geo. V, c. 7); Public Works Construction, 1934 (24-25 Geo. V, c. 59).

Railways and Canals.—Department of Railways and Canals (171); Government Railways (173); Intercolonial and P.E.I. Railway Employees' Provident Fund (6-7 Edw. VII, c. 22 and amending Acts); Acts to amend the National Transcontinental Railway Act (4-5 Geo. V, c. 43 and 5 Geo. V, c. 18); Canadian National Railways (172) and amending Acts 1918, c. 13, 1929, c. 10 and 1931, c. 6; Canadian National Railway Branch Lines (14-15 Geo. V, cc. 14-32, 15-16 Geo. V, cc. 5, 6 and 7, 17 Geo. V, cc. 12-26, 18-19 Geo. V, cc. 18-36, 22-23 Geo. V, c. 24); Government Employees Compensation (30) and amending Act, 1931,

c. 9; Canadian National Refunding, 1927 (17 Geo. V, c. 27); Canadian National Refunding, 1929 (19-20 Geo. V, c. 11); Canadian National (Central Vermont) Financing, 1930 (20-21 Geo. V, c. 7); Canadian National Refunding, 1930 (20-21 Geo. V, c. 8); Grand Trunk Pacific Securities, 1927 (17 Geo. V., c 7); Canadian National Steamships, 1927 (17 Geo. V, c. 29); Canadian National Railways Pension (19-20 Geo. V, c. 4); Canadian National Montreal Terminals, 1929 (19-20 Geo. V, c. 12); Maritime Freight Rates (79); Canadian National-Canadian Pacific, 1933 (23-24 Geo. V, c. 33); Canadian National Railways Financing, 1931, (c. 22, 1932, cc. 6 and 25, 1932-33, c. 34 and 1934, c. 28); An Act respecting the appointment of Auditors for National Railways (24-25 Geo. V, c. 3).

The "Railway Act" (Companies) confers certain powers upon the Minister of the Department. In the case of subsidized railways, the authorizing Acts are carried out under the Department, which also has certain jurisdiction where Government guarantee has been given.

Secretary of State.—Companies (24-25 Geo. V, c. 33); Naturalization (138); Patents (150 as amended 1928, c. 4; 1930, c. 34 and 1932, c. 21); Copyright (32); Unfair Competition (22-23 Geo. V, c. 38); Canada Temperance (196); Boards of Trade (19); Ticket of Leave (197); Trade Unions (202); Treaties of Peace.

Trade and Commerce.—Canada Grain (86) (20-21 Geo. V, c. 5); Electricity and Fluid Exportation (54); Electricity Inspection (55); Electric Units (56); Gas Inspection (82); Inland Water Freight Rates (208); Precious Metals Marking (84) (18-19 Geo. V, c. 40, 19-20 Geo. V, c. 53); Statistics (190); Weights and Measures Inspection (212); Act to place Canadian Coal used in the Manufacture of Iron or Steel on a Basis of Equality with Imported Coal (20-21 Geo. V, c. 6).

Section 3.—Publications of Dominion Departments.

List of Principal Publications of the Departments of the Government of the Dominion of Canada as Compiled from Information Supplied by the respective Departments.

Note.—A catalogue of the official publications of the Parliament and Government of Canada, stating prices, is issued regularly once a year, with supplements when required; copies may be obtained from the King's Printer, Ottawa.

Agriculture.—Annual Reports of the Minister, the Veterinary Director General, and progress reports of the Bacteriology, Cereal, Chemistry, Forage Crops, and Illustration Stations Divisions of the Experimental Farms Branch. Bulletins, pamphlets and circulars of the Experimental Farms Branch on a great variety of agricultural subjects, including publications of the following Divisions: Field Husbandry; Animal Husbandry; Horticulture; Cereal; Chemistry; Forage Plants; Botanical; Poultry; Tobacco; Economic Fibre; Bacteriology; Bees; and Illustration Stations. Bulletins of the Dairy and Cold Storage Branch relating to the dairying and cold storage industries in Canada, the making of butter and cheese, dairying experiments, co-operation, etc. Reports, bulletins, pamphlets, etc., of the Live Stock Branch on cattle, sheep, swine, poultry, marketing of eggs, wool, etc. Bulletins of the Health of Animals Branch, with regulations as to: contagious abortion; rabies; sheep scab; actinomycosis; anthrax; glanders; hog cholera; maladie du coît; tuberculosis; foot-and-mouth disease; quarantine; and meat inspection. Bulletins and reports of the Seed Branch as to seed-testing, the production and use of seed grains, the Seed Control Act, the Feeding Stuffs Act and the Fertilizers Act. Bulletins and circulars of the Entomological Branch and instructions to importers of nursery stock. Fruit Branch reports relating to the marketing of fruits and vegetables and their preservation, the Fruit and Honey Act and the Maple Sugar Industry Act.

A pamphlet entitled "List of Publications" contains a list of the publications of the Department, numbering more than 400. These publications include, in addition to the reports, bulletins and pamphlets on field crops, live stock, dairying, orchard and garden, animal, insect and plant diseases, bee-keeping, poultry, and miscellaneous topics. With few exceptions, the publications of the Department are free on application to its Publicity and Extension Branch.

Auditor General.—Annual Report.

Board of Railway Commissioners for Canada.—Annual Report. Pamphlet containing Judgments, Orders, Regulations and Rulings, issued fortnightly.

Civil Service Commission.—Annual Report; Classification of the Civil Service of Canada, revised up to Dec. 1, 1930; Regulations of the Civil Service Commission; How Appointments are made in the Public Service; Examinations for Clerks, Stenographers and Typists; Examinations for Customs Service; Examinations for Postal Service; Examinations for Junior Trade Commissioners.

Dominion Fuel Board.—The Dominion Fuel Board was created in 1922 primarily to instigate a thorough study of the underlying causes of recurring fuel shortages in Canada and of the methods by which they might be counteracted. It is composed of officers of

the Department of Mines and of the Interior and the co-operation of both Departments is given to the Board in its investigations. Partly as a result of the investigations and recommendations of the Board and of the publicity given to its findings, diversified sources of fuel supply have been developed and fuel shortages are no longer experienced. The Board has been instrumental in enabling Canadian coal to find markets in territory previously supplied from foreign sources. At the present time the work of the Board covers continued investigation of the fuel situation in relation to Canada; the Board also administers the Domestic Fuel Act, and the Orders in Council providing assistance to the coal industry. The following reports and publications have been issued: Interim Report of the Dominion Fuel Board (1923); Central and District Heating—Possibilities of Application in Canada, by F. A. Combe (1924)[1]; Coke as a Household Fuel in Central Canada, by J. L. Landt (1925)[1]; The Smoky River Coal Field, by James McEvoy (1925)[2]; Coking Experiments on Coals from the Maritime Provinces, by B. F. Haanel and R. E. Gilmore (1926)[3]; Instructions for Burning Coal, Coke and Peat (1927)[3]; Tests of Various Fuels Made in a Domestic Hot Water Boiler, by E. S. Malloch and C. E. Baltzer (1927), revised 1929[3]; Why you Should Insulate your Home, by G. D. Mallory (1927)[4]; Industrial Fuel and Power Statistics for Ontario, Calendar Year 1925, by E. S. Malloch and C. E. Baltzer (1928)[5]; Dominion Fuel Board, Second Progress Report, 1923-28 (1928); Humidity in House Heating, by E.S. Martindale (1929)[4]; Cards bearing instructions on "How to Burn Coke"; Comparison of the Cost and Convenience of House Heating with Various Fuels, by E. S. Malloch (1929)[1]; The Insulation of New and Old Houses, by G. D. Mallory (1932)[6]; Graph Showing the Supply and Distribution of Coal in Canada, 1923-1931 (1932); Graphs Showing Operating Costs and Revenues of Canadian Coal Mining Districts for 1931, 1932 and 1933; Fuels Sold for Domestic Purposes in Ontario and Quebec, 1926[1]; Fuels Sold for Domestic Purposes in Ontario, Quebec and Manitoba, 1927[1]; Fuels Distributed for Domestic Heating in the Maritimes, Ontario, Quebec and Manitoba, 1928 and 1929[1]; Fuels Distributed for Domestic Heating in Quebec, Ontario and Manitoba for 1930, 1931 and for the period 1928-1932[1]; Petroleum Fuels in Canada, 1930, '31, '32, by J. M. Casey (1934)[3].

External Affairs.—Annual Report. Annual Treaty Series. British and Foreign Government Representatives in Canada. Report of the Canadian Delegates to the Assembly of the League of Nations.

Finance.—Annual Report on the Public Accounts of the Dominion of Canada. Monthly Statements of the Chartered Banks of Canada. Estimates. Particulars of Dominion of Canada Loans Outstanding.

Fisheries.—(Publications marked * are available in both English and French editions.) —*Annual Report, including Fish Culture Report. Annual Statistical Report (contains both English and French sections). *Fish Culture Report. Popular Account of a Number of Canadian Fishes—A. Halkett. *Canada's Fisheries. Map of the Atlantic Coast Provinces showing the Inshore and Deep-sea Fishing Grounds. Statistics of the Haddock Fishery in North American Waters—A. W. H. Needler. Statistics of the Catch of Cod off the East Coast of North America, 1926—O. E. Sette. Statistics of the Mackerel Fishery off the East Coast of North America, 1804 to 1930—O. E. Sette and A. W. H. Needler. Fisheries Investigations in Hudson and James Bays and Tributary Waters, 1914—Melville, Lower and Comeau. Discoloration, Smut or Blackening of Canned Lobsters—Harrison and Hood. Historical Account of the Lobster Canning Industry—R. H. Williams. *Fish Canning in Canada. Fish and Chips Shops. *Fisheries News Bulletin (monthly). *The Salmon Fishery of British Columbia. Report on Fisheries Investigations in Hudson Bay, 1930. *Summary of the Report by Messrs. Cockfield, Brown and Company, Limited, on the Marketing of Canadian Fish and Fish Products. *Oyster Farming on the Atlantic Coast of Canada. Hardening Mud Bottoms for Oyster Culture (mimeographed). *Red Discolouration of Cured Codfish. *Factors in the Shipment of Live Lobsters from Eastern Nova Scotia. Investigations into the Natural History of the Herring—Hjort. *Fish and How to Cook It. *The Life of the Atlantic Salmon. *Proceedings of the North American Council on Fishery Investigations, 1921-1930. *Report of the Royal Commission Investigating the Fisheries of the Maritime Provinces and the Magdalen Islands, 1927. *The Storage of Oysters—A. W. H. Needler. Check List of the Fishes of the Dominion of Canada and Newfoundland, illustrated *($2.00)*—A. Halkett.

Geographic Board of Canada.—18th Report, containing all decisions to Mar. 31, 1924; 19th Report, containing all decisions from April 1, 1924, to July 31, 1927, with supplements numbers 1 to 12; "Place-Names of Alberta", 1928, *25 cents;* "Place-Names of Manitoba", 1931; "Meaning of Canadian City Names", 1922; "Place-Names on Magdalen Islands, Quebec", 1922; "Place-Names of Prince Edward Island with Meanings", 1925, *25 cents;*

[1]Published by the Dominion Fuel Board in co-operation with the Mines Branch, Department of Mines. [2]Published by the Dominion Fuel Board in co-operation with the Geological Survey, Department of Mines. [3]Published by the Mines Branch, Department of Mines, in co-operation with the Dominion Fuel Board. [4]Published by the Natural Resources Intelligence Bureau, Department of the Interior, for the Dominion Fuel Board. [5]Published by the Mines Branch, Department of Mines, in co-operation with the Dominion Fuel Board and the Dominion Bureau of Statistics. [6]Published by the National Development Bureau, in co-operation with the Dominion Fuel Board.

"Place-Names in Thousand Islands, St. Lawrence River", 1910; "Place-Names on Anticosti Island, Quebec", 1922; Catalogue and Graphical Index of Maps in the Geographic Board Library, two volumes, 1922, supplement, 1925.

Indian Affairs.—Annual Report. Indian Act, (c. 38, R.S.C., 1927). Schedule of Indian Reserves, 1928, *price $1.* Indian Treaties and Surrenders, Vols. I, II, III, *price $15.* Census of Indians in Canada, 1934.

Insurance.—Quarterly Statement showing List of Registered Companies. Annual Abstract of Statements of Insurance Companies in Canada (subject to correction). Annual Reports of the Insurance Department, Vol. I (Fire and Miscellaneous), Vol. II (Life Companies and Fraternal Benefit Societies). Annual List of Securities held by Insurance, Trust and Loan Companies in Canada, with Department's Valuation thereof. Abstract of Statements of Loan and Trust Companies in Canada. Annual Report of Loan and Trust Companies incorporated by the Dominion.

Interior.—Annual Report. The Department of the Interior issues publications dealing with the work of the following branches: National Parks Branch, including Historic Sites and Migratory Birds. Dominion Forest Service. Topographical and Air Survey Bureau. Dominion Water Power and Hydrometric Bureau. Geodetic Survey of Canada. International Boundary Commission. Dominion Lands Administration, including Northwest Territories and Yukon. Dominion Observatory, Ottawa. Dominion Astrophysical Observatory, Victoria. The publications of the Department were published in detail at pp. 970-978 of the 1932 Year Book. Reports on the work of the above branches may be had, if available, upon application to the branch concerned, Department of the Interior, Ottawa, Canada.

International Boundary Commission.—*Reports.*—Joint Report upon the Survey and Demarcation of the Boundary between the United States and Canada from the source of the St. Croix River to the Atlantic Ocean, 1934, *$5;* Joint Report upon the Survey and Demarcation of the Boundary between the United States and Canada from the source of the St. Croix River to the St. Lawrence River, 1925, *$5;* Report of the International Waterways Commission upon the International Boundary between the Dominion of Canada and the United States, through the River St. Lawrence and the Great Lakes, with full set of 30 maps, 1915, *$7.50;* Joint Report upon the Survey and Demarcation of the Boundary between the United States and Canada from the Northwesternmost Point of Lake of the Woods to Lake Superior, 1931, *$5.* Joint Report upon the Survey and Demarcation of the Boundary between the United States and Canada from the Western Terminus of the Land Boundary along the 49th Parallel, on the west side of Point Roberts, through Georgia, Haro and Juan de Fuca Straits, to the Pacific Ocean, with accompanying Chart, 1921, *$5;* Joint Report upon the Survey and Demarcation of the Boundary between the United States and Canada along the 141st Meridian from the Arctic Ocean to Mount St. Elias, 1918, *$5. Maps.*—From the source of the St. Croix River to the Atlantic Ocean, 18 sheets, various scales, sizes 26 by 38 inches, *50 cents each;* from the St. Lawrence River to the source of the St. Croix River, 61 sheets and index sheet, various scales, 26 by 38 inches, *50 cents each;* from the St. Lawrence River at St. Regis to the head of Pigeon Bay in Lake Superior, 29 sheets and index sheet, International Waterways Commission, various scales 29½ by 36 inches, *25 cents each;* Northwesternmost Point of Lake of the Woods to the head of Pigeon Bay in Lake Superior, 36 sheets and index sheet, various scales, 26 by 38 inches, *50 cents each;* 49th Parallel, Point Roberts to Northwesternmost Point of the Lake of the Woods, 59 sheets, index and profile sheets, scale 1:62,500, size 15 by 30 inches, sheets 1 to 19, *50 cents each,* sheets 20 to 59, *25 cents each;* west side of Point Roberts through Georgia, Haro and Juan de Fuca Straits to the Pacific Ocean, 1 sheet, scale 1:200,000, 28 by 41 inches, *50 cents;* Cape Muzon to Mount St. Elias, 13 sheets 25 by 29 inches, scale 1:250,000, sheets 1 and 2 not yet published, *50 cents each;* 141st Meridian from the Arctic Ocean to Mount St. Elias, 38 sheets, scale 1:62,500 with profile sheet, index sheet and special Arctic Coast sheet, size 18 by 27½ inches, *25 cents each;* Mount St. Elias to White River sheet, scale 1:250,000, size 19 by 28 inches, *25 cents.*

These reports or maps may be obtained on application to the International Boundary Commission, Department of the Interior, Ottawa. Cheques should be made payable to the Receiver General of Canada.

Justice.—Annual Report of the Superintendent of Penitentiaries.

King's Printer and Controller of Stationery.—The *Canada Gazette,* published weekly, with occasional supplement and extras; subscription, in Canada and United States, *$8 per annum* payable in advance, single copies *20 cents each,* other countries *$10 per annum* and *25 cents per single copy.* Judgments of the Board of Railway Commissioners, semi-monthly, *$3 per annum,* single copies, *20 cents.* Canada Law Reports, published monthly, *yearly subscriptions, $6.* Revised Statutes of Canada, 1927 (5 vols.), *$10.* Annual Statutes, 1928-34, *$5 each.* Acts, Public and Private, with Amendments to date, *10 cents* to *$1 per copy.* Canadian Postal Guide, *$1 paper cover, $1.50 cloth cover;* including supplements, additional *25 cents.* Parliamentary Debates, "Hansard", issued daily during session French and English, *$3 per session each* for House of Commons and Senate Debates; single copies, *5 cents.* Prices of bluebooks are in nearly every case printed upon the front cover

and are based practically on cost. They may be ordered direct from the King's Printer, Ottawa. A catalogue of official publications of the Parliament and Government of Canada is issued regularly once a year with supplements when required and copies may be obtained from the King's Printer, Ottawa.

Labour.—*Monthly.*—The *Labour Gazette* (published in English and French) at a subscription price of *20 cents per annum*. *Annually.*—Report of the Department of Labour (including: Reports of Proceedings under the Industrial Disputes Investigation Act, Conciliation and Labour Act, Employment Offices Co-ordination Act, Technical Education Act, Government Annuities Act, Combines Investigation Act, Old Age Pensions Act, Fair Wages and Eight-Hour Day Act, and the Relief Legislation). Labour Legislation in Canada as existing on Dec. 31, 1928 (a supplementary report thereto on Labour Legislation is published annually in February or March). Labour Organization in Canada. Wages and Hours of Labour in Canada. Prices in Canada and other Countries. Strikes and Lockouts in Canada and other Countries. *General Reports.*—Report of Royal Commission on Industrial Relations, bound with Report of Proceedings and Discussions of National Industrial Conference, 1919. Hours of Labour in Canada and other Countries, 1923. Report of Commission appointed under Order in Council (P.C. 1929), Sept. 22, 1923, to inquire into the Industrial Unrest among the Steel Workers at Sydney, N.S. Judicial Proceedings respecting Constitutional Validity of the Industrial Disputes Investigation Act, 1907, and Amendments of 1910, 1918, 1920 and 1925. The Employment of Children and Young Persons in Canada. Trade Union Law in Canada. *Reports of Investigations under the Combines Investigation Act.*—(1) Investigation into Alleged Combine in the Distribution of Fruits and Vegetables in Western Canada, 1925; (2) Investigation into Alleged Combine amongst Coal Dealers at Winnipeg and other places in Western Canada, 1925; (3) Investigation into Alleged Combine limiting Competition in the Marketing of New Brunswick Potatoes, 1925; (4) Investigation into Alleged Combine in the Manufacture and Sale of Bread in the City of Montreal, 1926; (5) Investigation into Alleged Combine in the Distribution of Fruits and Vegetables produced in Ontario, 1926; (6) Investigation by Registrar into the Proprietary Articles Trade Association, 1926; (7) Investigation by Commissioner into the Proprietary Articles Trade Association, 1927; (8) Report of the Commissioner on the Amalgamated Builders' Council, 1929; (9) Report of Commissioner on the Electrical Estimators' Association, 1930; (10) Report of Registrar into Alleged Combine in the Bread-Baking Industry in Canada, 1931; (11) Report of Commissioner on Alleged Combine in the Motion Picture Industry in Canada, 1931. *Bulletins in Industrial Relations Series.*—(1) Joint Councils in Industry; (2) Report of a Conference on Industrial Relations, 1921; (3) Joint Conference of the Building and Construction Industries in Canada, 1921; (5) Canada and the International Labour Conference; (7) Canadian Railway Board of Adjustment, No. 1, Second Report; (8) National Conference Regarding Winter Employment in Canada, 1924; (9) Canadian Railway Board of Adjustment, No. 1, Third Report; (10) Canadian Railway Board of Adjustment, No. 1, Fourth Report; (11) Government Intervention in Labour Disputes in Canada; (12) Canadian Railway Board of Adjustment, No. 1, Fifth Report.

Marine.—Annual Report. List of Canadian Shipping. Reports of Expeditions to Hudson Bay, Northern Waters and Arctic Archipelago. List of Lights, etc., in Canada: (a) Pacific Coast; (b) Atlantic Coast; (c) Inland Waters.

Charts and Publications of the Canadian Hydrographic Service.—Catalogue of Marine Charts, Sailing Directions, Tidal Information and other Canadian Government publications of interest to mariners (free). *Pilots.*—(*Price $1 per copy* payable in advance by P.O. order, express order or marked cheque, only.) Gulf of St. Lawrence Pilot, 1934, St. Lawrence Pilot (below Quebec), comprising sailing directions from cap des Rosiers to Quebec, 5th edition, 1929. Supplement No. 2 to above, 1933. St. Lawrence River Pilot, Quebec to Montreal and Richelieu River, 1931. Supplement No. 1 to above, 1933. St. Lawrence Pilot, Montreal to Kingston and Ottawa River, 1933. Great Lakes Pilot, Vol. II (Lake Huron & Georgian Bay), 1933. Great Lakes Pilot, Vol. I (Lakes Ontario, Erie and St. Clair and Welland Canal, Niagara, Detroit and St. Clair Rivers, 1933). Sailing directions for the Canadian shores of lake Superior, 1st edition, 1922. Supplement No. 2 to the above, 1931. Sailing directions for lake Melville and approaches (Coast of Labrador), 1931. Sailing directions for the Hudson Bay route, 1933. British Columbia Pilot, Vol. I, southern portion of the coast of British Columbia from Juan de Fuca strait to cape Caution including Vancouver I. and inner passages, 1st edition, 1933. British Columbia Pilot, Vol. II, northern portion of the coast of British Columbia from cape Caution to Portland inlet and Queen Charlotte islands, 1st edition, 1930. Saint John river Sailing Directions, 1934. Navigating charts. *Reports of the International Waterways Commission.*—On the International Boundary Line through the St. Lawrence river, Great Lakes and connecting waters, 1915. *Tidal and Current Survey Reports.*—(issued *free of charge*)—Currents in the gulf of St. Lawrence, including the Anticosti region, Cabot strait and Northumberland strait. Currents of the southeastern coasts of Newfoundland (*out of print*). Currents in Belle Isle strait (*temporarily out of print*). Currents in the entrance to the St. Lawrence estuary. Tables of hourly directions and velocity of currents and time of slack water in the bay of Fundy. Tide levels and datum planes on the Pacific coast of Canada. Tide levels and datum planes in Eastern Canada, giving the levels in 86 harbours and other localities. Tides at the head of the

bay of Fundy, with diagrams. Tidal investigations and results; Arctic tides, with map. Tides and tidal streams; a general description of the various types of tide and the behaviour of currents, with plates. Temperatures and densities of the Waters of Eastern Canada, with maps. *Tide Tables.*—(issued *free of charge*)—Tide tables for the Pacific coast of Canada, including: Juan de Fuca strait, the strait of Georgia, and the northern coast with data for slack water in the navigable passes and narrows and information on currents. Tide Tables for the Atlantic coast of Canada, including: the river and gulf of St. Lawrence, the Atlantic coast, the bay of Fundy, Northumberland and Cabot straits, Hudson bay, and information on currents. Abridged edition for Quebec, Father point and the St. Lawrence river. Abridged edition for Saint John, N.B., and the bay of Fundy (with time of high water at Windsor, N.S.). Abridged edition for Halifax, N.S. and Sydney, N.S. Abridged edition for Charlottetown, P.E.I., Pictou, N.S., St. Paul I. with tidal differences for north shore of Prince Edward I., Sydney, Northumberland strait, Cape Breton, Magdalen Is., etc. Abridged edition for Vancouver, Sand Heads and the strait of Georgia, B.C. Abridged edition for Prince Rupert, B.C., with tidal differences for the northern coasts of British Columbia. Slack water tables for the strait of Canso and Great Bras d'Or lake, N.S., Slack water tables for first Narrows, Vancouver harbour, Active pass and Turn point, B.C. (Mimeograph copies of tide tables for Port Nelson.)

Charts of the Canadian Hydrographic Survey.—(*Price 50 cents each.*) Nearly four hundred and fifty charts and plans are published of the Atlantic coast and its harbours, Hudson bay, Hudson strait and harbours and anchorages, the St. Lawrence river, the Ottawa river, lake Ontario and harbours, lake Erie and harbours, lake Huron and Georgian bay and harbours, lake Superior and harbours, lake of the Woods, lake Winnipeg, Nelson river, Great Slave lake, Pacific coast and harbours. There is also a number of International Waterways Commission charts, not intended for navigation.

Radio Branch.—Obtainable from the Director, Radio Branch, Department of Marine, Ottawa.—Map showing radio stations operated as Aids to Navigation, 1935 (*25 cents*); British Postmaster-General's Handbook for Wireless Telegraph Opeartors (*25 cents*); Official List of Radio Stations in Canada (*25 cents);* Kilocycle-Metre Conversion Chart (*10 cents);* Radiotelegraph Act and Regulations issued thereunder (*10 cents*); Pamphlet containing Extracts from the Radiotelegraph Act and Regulations issued thereunder with reference to Amateur Experimental Radio Stations (*free);* Pamphlet containing Examination Procedure for Certificates of Proficiency in Radio for Commercial Operators (*free*).

Obtainable from The King's Printer, Government Printing Bureau, Ottawa.—International Telecommunication Convention of Madrid, 1932, together with the Radio Communication Regulations annexed thereto (*25 cents);* Radiotelegraphy Requirements for Ships registered in Canada and engaged on international voyages in accordance with the Safety of Life at Sea and Loadline Conventions Act, 1931, and the Regulations issued thereunder (*10 cents);* Bulletin No. 2 (1932) Radio Inductive Interference (*35 cents);* Supplement "A" (1934) to Bulletin No. 2 (*15 cents*).

Mines.—The scientific and investigatory work of the Department of Mines, which is chiefly concerned with the development of the Dominion's mineral industries, is carried on by the Department's four principal branches—the Bureau of Economic Geology (with which is associated the Geological Survey), the Mines Branch, the National Museum of Canada and the Explosives Division.

The Bureau of Economic Geology (and the associated Geological Survey) carries on areal and economic investigations and research work in geology and mineralogy; the Mines Branch carries on field, laboratory, and industrial investigations covering the various phases of the mining and metallurgical industries from the primary occurrence of the ores to the utilization of the finished products; the National Museum of Canada carries on scientific investigations in all branches of natural history; and the Explosives Division, under the provisions of the Explosives Act (R.S.C., 1927, c. 62) has supervision of the manufacture, testing, storage and importation of explosives and issues the licences and permits authorized by the Act.

The Department of Mines publishes an annual administrative report covering the activities of the whole Department, and occasional pamphlets illustrating the services rendered the mining and metallurgical industries. Each of the branches publishes annual reports in addition to memoirs and bulletins on special investigations and districts.

Bureau of Economic Geology.—The Geological Survey from 1842 to 1904 published annual volumes. From 1904 to 1910, upwards of 80 reports were issued, all separately. Since then the publications have consisted of memoirs and bulletins appearing at irregular intervals, an annual summary report and miscellaneous publications, including geological and topographical maps, geological guide books and handbooks. The subjects dealt with include areal and economic geology of particular districts, mineralogy, palæontology and related topics. In 1926 the first volume of a new Economic Geology Series was published, and further volumes of this series have since been issued. A list of the reports published by this branch may be obtained on application to the Director, Bureau of Economic Geology, Ottawa.

The National Museum of Canada has published a series of *Museum Bulletins* in many branches of natural history. A list of these may be obtained on application to the Director, National Museum of Canada, Ottawa.

The Mines Branch, since its inception in 1908, has published annual summary reports covering the investigations of the Divisions of Mineral Resources, Ore Dressing and Metallurgy, Fuels and Fuel Testing, Ceramic and Road Materials and Chemistry. More detailed and comprehensive reports have also been published by this branch, dealing with the technology of most of the economic minerals of Canada. A list of the Mines Branch reports may be had on application to the Director, Mines Branch, Ottawa.

The Explosives Division has published annual reports since 1919 and a number of pamphlets on the proper care and handling of explosives. Copies may be obtained on application to the Chief Inspector of Explosives, Department of Mines, Ottawa.

The publications of the Department of Mines cover all phases of mining from preliminary explorations and surveys of unmapped territory through the mining, milling, smelting and refining of the ores to the marketing and utilization of the finished product. Most of these reports and maps may be obtained free of charge by those interested on application to the Deputy Minister of Mines, Ottawa, or to the Directors of the Branches concerned, whose addresses are given above. Many of these reports may be had in French translations.

National Defence.—Annual Report; List of Officers, Defence Forces of Canada, Naval, Military and Air Services; Canadian Navy List; Naval General Orders; General Orders, Militia and Air Services; Militia Orders; Air Regulations.

National Research Council.—*Annual Reports.*—Reports of the National Research Council for the years 1917-18 to 1933-34. *Technical Reports.*—(For Nos. 1 to 21 see p. 1042 of the 1927-28 Year Book. Nos. 3, 4, 6, 8, and 12 are now out of print.) No. 22, An Experimental Study of Sieving, by J. B. Porter, Ph.D., D.Sc.; No. 23, The Storage of Apples in Air-cooled Warehouses in Nova Scotia, by S. G. Lipsett, Ph.D., covering investigation by Associate Committee on Fruit Storage; No. 24, The Drying of Wheat, covering an investigation by the Associate Committee on Grain Research; No. 25, The Drying of Wheat (Second Report), by E. Stansfield and W. H. Cook, covering an investigation under the Associate Committee on Grain Research; No. 26, Weed Survey of the Prairie Provinces, by J. M. Manson, prepared under the auspices of the Associate Committee on Weed Control; No. 27, Weeds and Their Control, a popular account prepared under the auspices of the Associate Committee on Weed Control, by G. P. McRostie, L. E. Kirk, G. Godel, W. G. Smith and J. M. Manson; No. 28, Report on Comparative Feeding Values for Livestock of Barley, Oats, Wheat, Rye and Corn, by E. W. Crampton. *Bulletins.*—(For Nos. 1 to 12, see p. 1042 of the 1927-28 Year Book. Nos. 3, 4, 6, 7, 9, and 11 are now out of print.) No. 13, Interim Report on Protein Content as a Factor in Grading Wheat, prepared by the Associate Committee on Grain Research; No. 14, Report on Inquiry in Europe Regarding the Feasibility of Using Protein Content as a Factor in Grading and Marketing Canadian Wheat, by R. Newton, Ph.D.; No. 15, Review of Literature dealing with Health Hazards in Spray Painting, submitted by the Associate Committee on Spray Painting. *Periodical*—Canadian Journal of Research, published monthly since May, 1929.

National Revenue.—Annual Report, containing statements relative to Imports, Exports, Excise and Income. Annual Report of Shipping. National Revenue Review (monthly).

Pensions and National Health.—(2) The Canadian Mothers' Book; (12) Canadians Need Milk; (19) Athlete's Foot; (23) Venereal Diseases—Diagnosis and Treatment; (24) Information for Men—Syphilis and Gonorrhœa; (25) Information for Young Women about Sex Hygiene; (26) Information for Parents—Teaching of Sexual Hygiene to Children; (27) Prevention of Blindness in Babies; (28) Periodic Medical Examinations; (29a) Goitre—Facts for the General Public; (30) How to Build Sound Teeth; (31) What You Should Know About Tuberculosis; (32) Smallpox and Vaccination; (33) Narcotism in Canada; (51) Be Prepared to Prevent Infantile Paralysis; Septic Tanks.

(Note.—Publications 23 and 28 are for the *Medical profession only.*)

Post Office.—Annual Report of the Postmaster General. Official Postal Guide. Regulations as to Rural Mail Delivery. Booklet of Postal Information.

Public Works.—Annual Report.

Railways and Canals.—Annual Report of the Department; Canals of Canada; The Trent Canal System; Canal Rules and Regulations; Port Colborne Elevator Tariff and Regulations; Prescott Government Grain Elevator Tariff.

Secretary of State.—Annual Report. The Arms of Canada.

Trade and Commerce.—(Note.—Requests for those publications marked with an asterisk should be addressed to the King's Printer; the remaining publications may be obtained from the Deputy Minister, Department of Trade and Commerce.) *Annual Report of the Dept. of Trade and Commerce, *25 cents*; *Annual Report of the Board of Grain Commissioners for Canada, *25 cents*; *Annual Report of Electricity and Gas, *25 cents*; Annual Reports of Dominion Grain Research Laboratory; Electrical Standards and their application to Trade and Commerce; *List of Licensed Elevators, etc., *50 cents*; Motion Pictures (catalogue of), *25 cents*; Precious Metals Marking Act, Office Consolidation, *10 cents*.

Publications of the Commercial Intelligence Service.—NOTE.—Publications of the Commercial Intelligence Service are compiled with a view to furnishing Canadian exporters with information respecting the possibilities for the sale of Canadian goods abroad, the nature of the competition to be encountered, Customs requirements, etc., and are not intended for general distribution. Although subscribers to the Commercial Intelligence Journal are entitled to receive such reports free of charge, in all other cases their distribution is controlled by the King's Printer, who fixes a price therefor as indicated in the following list: Commercial Intelligence Journal Weekly (in English and French), containing Reports of Trade Commissioners and other Commercial Information. Annual subscription: In Canada, *$1;* single copies, *5 cents.* Outside Canada, *$3.50;* single copies, *10 cents.* (NOTE—Subscribers to the Commercial Intelligence Journal are entitled to receive all other publications of the Commercial Intelligence Service *free of charge*); Australian Market for Fish Products (1931); Foreign Markets for Canadian Certified Seed Potatoes (1930), *25 cents;* French-Canadian Homespun Industry; Greece as a Market (1931), *25 cents;* Invoice Requirements—Leaflets covering countries included in the territories assigned to Trade Commissioners are available to exporters *free of charge.* Yugoslavia as a Market (1930), *25 cents;* Map of the World showing Trade Routes (1930 Edition); Markets of Central America (1929), *25 cents.* Points for Exporters—Leaflets covering countries included in the territories assigned to Trade Commissioners are available to exporters *free of charge.* Sweden as a Market for Canadian Products (1928), *25 cents;* Switzerland as a Market (1929), *25 cents;* Trade of the African Sub-Continent (1928), *25 cents;* Trade Possibilities of the Baltic States (1929), *25 cents;* Trading with Colombia and Venezuela (1928), *25 cents.*

Dominion Bureau of Statistics.—For the publications of the Dominion Bureau of Statistics see pp. 1147 to 1157.

Reports of Royal Commissions.—Report of the Royal Commission on the Transfer of the Natural Resources of Manitoba, 1929, *Price 25c.;* Report of the Royal Commission on Technical and Professional Services, 1930, *Price 15c.;* Report of the Commission of Enquiry into Trade in Grain Futures, 1931, *Price 25c.;* Report of the Royal Commission to Enquire into Railways and Transportation in Canada, 1931-32, *Price 75c.;* Report of the Royal Commission on Banking and Currency in Canada, 1933, *Price 50c.;* Report of the Royal Commission on the Natural Resources of Alberta, 1935, *Price 25c.;* Report of the Royal Commission on the Natural Resources of Saskatchewan, 1935, *Price 25c.;* Report of the Royal Commission on Price Spreads, 1935, *Price $1;* Report of the Royal Commission on Financial Arrangements between the Dominion and the Maritime Provinces, 1935, *Price 10c.*

Other Reports.—National Parks Survey, 1931-32, *Price $1.*

Section 4.—Publications of Provincial Governments.

PRINCE EDWARD ISLAND.

Journal of the Legislative Assembly. Statutes. General Index of Statutes of P.E.I., 1869-1928. *Royal Gazette.* Annual Reports of the Provincial Auditor on Public Accounts, Departments of Public Works and Highways, Education, Agriculture, Falconwood Hospital (for the Insane) and Provincial Infirmary, Vital Statistics and Public Health.

NOVA SCOTIA.

Royal Gazette. Statutes, Journal and Proceedings of the House of Assembly. Journal of Education. Manual of the Public Instruction Acts and Regulations of the Council of Public Instruction. Roy; Report of the Director of Public Charities.

Treasury.—Annual Statement of Public Accounts; Annual Estimates; Annual Budget Speech; Annual Report on Insurance Companies; Annual Report on Mutual Benefit Associations; Annual Report on Trust Companies.

Bureau of Revenue.—Annual Report of the Quebec Liquor Commission; Annual Report on Motor Vehicles Registrations; Statistics of Automobile Accidents.

Lands and Forests.—Annual Report of the Minister; Circular No. 1, La rouille vésiculaire du pin blanc—G.-C. Piché; Nomenclature of the Geographical Names in the Province of Quebec, Quebec Geographical Commission; Dictionnaire des Lacs et Rivières; Annual Report of the Quebec Streams Commission; Notes on the Forests of Quebec—G.-C. Piché; Forêts et chutes d'eau de la province de Québec; Rapport du Service de Protection; Tableau des forces hydrauliques concédées de 1867 à 1923 (Supplément 1923 au 7 avril 1930); Forests and Waterfalls; Quebec, Natural Resources.

Agriculture.—*Annual Reports.*—Department of Agriculture; Competition for Agricultural Merit; Dairymen's Association; Pomological Society; Society for Protection of Plants. *Bulletins.*—(1) Plans for Cheese and Butter Factories; (55) Poultry Raising in Towns and Villages; (40) How to plant your Fruit trees; (43) Bean Culture; (44) Vegetable Culture; (45) List of Presidents and Secretaries of Agricultural Societies; (67) Insectes nuisibles aux animaux de la ferme; (69) Enemies of Gardens and Orchards; (73) Instructions to School Farmers; (78) Farm Gas Engines; (87) La culture des pommes de terre; (89) The Drainage of Farm Lands; (90) Experiments with Grain Crops; (92) The Corn Borer; (95) Comptabilité Agricole; Farm Account Book; (100) Soils Drainage; (104) Les engrais chimiques; (107) Maladies du bétail laitier; (108) Maladies du cheval; (109) Elevage du porc à bacon; (110) La pomme de terre; (111) Les abeilles; (112) Les bonnes semences; (114) La taille du pommier; (115) Vegetable garden; (116) -L'alimentation du porc; (117) L'avortement contagieux; (118) Guide de la protection des cultures; (120) Cercles de jeunes agriculteurs; (121) Le cheval de ferme; (122) Culture du tabac; (123) Cueillette et emballage des pommes; (124) Arrosage du verger commercial (français et anglais); (125) Culture de la tomate, du piment et des aubergines; (126) Elevage des volailles; (127) Plantation d'un verger commercial; (128) Greenhouses, hotbeds and shelters; (129) Les cours d'eau municipaux; (130) Comment lutter contre le ver blanc; (131) Le pain de ménage; (132) La culture des fraises; (133) Cours d'agriculture; (134) L'industrie du sucre d'érable dans la province de Québec. *Circulars.*—(42) Sélection des troupeaux de volailles; (125) Guide des cercles de fermières; (65) Common weeds and their control; (66) Alfalfa growing in Quebec; (72) Loi des mauvaises herbes. *Miscellaneous.*—(107) Ventilation des étables; (108) Orientation de la culture maraîchère; (117, 118, 119) Plans de poulaillers; (136) Lois sur l'agriculture; (138) Lois-Conseil d'Agriculture; (159) Brochure—Mangeons du fromage; (164) Dairy farming; (165) Statuts et règlements des coopératives; (184) Tableau des mauvaises herbes; (291) Cent poules par ferme; (293) The Maple, Pride of Quebec.

Highways.—NOTE.—Publications marked (1) are bilingual; (2) Separate French and English editions; (3) English only.

(1) Annual Report of the Minister of Highways; (2) An Act Respecting the Roads Department (1934); (2) Tourist Bulletin (issued monthly); (1) Official Highway and Tourist Map (yearly); Tours in Quebec (80 pp. guide illustrated); (3) Montreal and the Laurentians (32 pp. guide illustrated); (3) Lake St. John-Chicoutimi-Saguenay (24 pp. illustrated); (3) The Gaspé Peninsula (32 pp. de luxe booklet); (3) Quebec Invites You, Welcome to the Province of Quebec (16 pp. illustrated booklet); (2) Gaspé Peninsula (260 pp.—complete guide—illustrated); (2) Along Quebec Highways (900 pp.—illustrated—*Price $2*); (3) The St. Maurice Valley (24 pp. illustrated); Québec et ses Régions de Tourisme (24 pp. illustrated).

Mines Branch.—Esquisse géologique et minéraux utiles de la province de Québec (1927); Iron Ores of the Province of Quebec, by P. E. Dulieux (1915); Extracts from Reports on the District of Ungava, by T. C. Denis (1915); Report on the Copper Deposits of the Eastern Townships, by J. Austen Bancroft (1916); L'industrie de l'amiante dans la province de Québec (1917); Report on Gold Deposits of Lake Demontigny, by Ad. Mailhiot (1922); Geological Sketch and Economic Minerals of the Province of Quebec (1924); Annual Reports on Mining Operations in the Province of Quebec.

Colonization.—Annual Report of the Minister; Le Guide du colon, 1932; Quebec Ready Reference, 1931.

Labour.—Minister's Report; Workmen's Compensation Act; Annual Report of the Workmen's Compensation Commission; Report of the Quebec Social Insurance Commission.

Public Works, Game and Fisheries.—Minister's Report; Statistics of Fire Losses in the Province; Fisherman's Paradise; The Laurentide National Park; Elevage du rat musqué; Fur Farming in the Province of Quebec, 1921.

Public Instruction.—Code scolaire (1927); School Law (1927); An Act respecting the Department of Education (1925); Regulations of the Catholic Committee (1930); Regulations of the Protestant Committee (1926); Memoranda of Instructions to Teachers for Intermediate and High Schools (1925); Annual Report; Financial Statement of the Superintendent of Public Instruction (annual); Mon premier livre (1st and 2nd parts) (1900), a fresh edition of which is printed every year; l'Enseignement primaire; Educational Record; Yearly circulars containing Instructions to School Boards and School Inspectors; Course of English and French for English Catholic Schools (1926); Manual respecting the course of study in the Protestant Elementary Schools; List of authorized text books.

Legislative Council.—Agenda Paper of the Legislative Council; Votes and Proceedings of the Legislative Council; Journals of the Legislative Council; Rules and Regulations of the Legislative Council.

Legislative Assembly.—Agenda Paper of the Legislative Assembly; Votes and Proceedings of the Legislative Assembly; Journals of the Legislative Assembly; Sessional Papers, Departmental Reports and Returns to Orders and Addresses of the Legislative Assembly; Report of the Clerk of the Crown in Chancery on Elections (published after every general election); Report of the Librarian of the Legislature; Annotated Rules and Standing Orders of the Legislative Assembly of Quebec; Private Bills in the Legislative Assembly of Quebec (a manual containing the rules relative to); Government and Legislature; List of the Chairmen and Members of the Committees of the Legislative Assembly.

ONTARIO.

Agriculture.—*Annual Reports.*—Minister of Agriculture; Agricultural College and Experimental Farm; Agricultural and Experimental Union; Stallion Enrolment Board; Agricultural Statistics; Vegetable Growers' Association; Entomological Society; Agricultural Societies; Horticultural Societies; Annual Report of Ontario Veterinary College. *Bulletins.*—(337) Parasites Injurious to Sheep; (338) Hints on Judging Live Stock, Poultry, Grains, Grasses and Roots; (342) Fire Blight; (343) New Fruits; (347) Hay and Pasture Crops; (348) Amateur Dramatics; (350) Warble Fly; (354) The Pear; (356) Insects attacking Fruit Trees; (357) Top Working and Repair Grafting, including Budding; (358) The European Corn Borer; (361) Farm Water Supply and Sewage Disposal; (363) Parasites injurious to Poultry; (364) Manures and Fertilizers; (366) Soy Beans in Ontario; (367) Pork on the Farm; (369) Vegetable Gardening; (373) Dairy Cattle; (374) Use More Ontario Honey; (375) Ontario-Grown Head Lettuce; (For previous bulletins, see p. 1046 of the 1927-28 Year Book.); (376) Weeds of Ontario; (377) Bee Diseases; (378) Bot Fly.

Attorney General.—Reports of Inspectors; Legal Officers; Registry Offices; Insurance; Division Courts. Annual Report of Commissioner of Provincial Police. Powers and Duties of Justices of the Peace in Ontario (handbook).

Education.—Annual Report of the Minister of Education. School Acts. Regulations and Courses of Study: (1) Public and Separate Schools; (2) Continuation Schools; (3) High Schools and Collegiate Institutes; Courses of Study and Examinations in Schools Attended by French-speaking Pupils; School Cadet Corps; General Announcementof Summer Courses; Text Book Regulations, including list of text books authorized and their prices; The list of school manuals with their prices; Summer Schools for training of Teachers; English-French Training Schools; Syllabus of Normal School Courses and Regulations for First and Second Class and Kindergarten-Primary Certificates; List of Teaching Days of High, Continuation, Public and Separate Schools; Recommendations and Regulations for Vocational Schools, etc.; Recommendations and Regulations for Agriculture and Household Science Departments; High School Entrance Examination Regulations; Annual Departmental Middle and Upper School Examinations; Announcement *re* the Carter Scholarships; The Penny Bank of Ontario; The School Attendance Acts and the Recommendations and Regulations and the Part Time Courses; The Consolidation of Rural Schools; Regulations for Consolidated Schools; Suggestions for Teachers of Subnormal Children; Accommodation, Equipment and Grants for Auxiliary Training Classes; Literature Selections for Departmental Examinations; Regulations, Medical and Dental Inspection, Public and Separate Schools; Schools and Teachers for the Province of Ontario, 1934; Bureau of Archives Report.

Game and Fisheries.—Annual Report, Department of Game and Fisheries; The Game and Fisheries Act and Regulations; Summary of the Game and Fisheries Act and Regulations; Feeding and Diseases of the Fox; The Mink in Captivity; Parasites of Fur-Bearing Animals; Hookworm Infection in Foxes; Studies on the Normal Blood of Foxes; Report of

the Special Fish Committee, 1928-1930; Report of the Special Game Committee, 1931-1933; The Small Mouthed Black Bass and its Conservation; The Maskinonge and its Conservation; The Speckled Trout and its Conservation.

Health.—*Acts.*—The Public Health Act and The Vaccination Act; The Venereal Diseases Prevention Act; The Cemetery Act; The Public Hospitals Act; The Private Hospitals Act; The Sanatoria for Consumptives Act; The Maternity Boarding House Act. *Regulations.*—Regulations for the Control of Communicable Diseases; Regulations Respecting Venereal Diseases; Regulations Respecting the Manufacture of Non-Intoxicating Beverages, Distilled and Mineral Water, and the Manufacture of Syrup, Wines and Brewed Beer; Regulations for the Sanitary Control of Lumber and Mining Camps; Regulations Governing the Construction and Management of Swimming Pools; Regulations *re* Cross Connection of Water Supplies. *Publications*—Numerous pamphlets on The Baby, Cancer, Mental Hygiene Series (Habit Training, Home Training, Speech Training, Special Problems), Venereal Diseases, etc., may be obtained from the Ontario Department of Health, Toronto. A full list of these is published annually in the Health Almanac.

Highways.—Annual Report; Annual Proceedings, Ontario Good Roads Association; (15) Highway Traffic Act and Regulations; (19) General Plans for Steel Highway Bridges, 1917; (22) Report on Street Improvement, 1917; (34) The Planting and Care of Roadside Trees, 1923; (35) Public Commercial Vehicles Act, 1931, and Amendment, 1934; Public Vehicle Act and Regulations; Consolidated Highway Improvement Act, 1931; Official Government Road Maps of Ontario, free on application.

Labour.—*Legislation.*—Department of Labour Act; Factory, Shop and Office Building Act; Steam Boiler Act; Canadian Interprovincial Regulations for the Construction and Inspection of Boilers, Tanks and Appurtenances; Operating Engineers Act and Regulations Governing the Issuance of Certificates; Employment Agencies Act and Regulations Governing Employment Agencies; Apprenticeship Act and Regulations Governing the Training of Apprentices in the Building Trades; Regulations Respecting the Protection of Persons Working in Compressed Air; Regulations Respecting the Protection of Persons Working in Tunnels or Open Caissons; Minimum Wage Act; Orders of the Minimum Wage Board. *Reports.*—Annual Report of the Department of Labour, including the reports of the General Superintendent of the Ontario Government Offices of the Employment Service of Canada, Chief Inspector of Factories, Chief Inspector of Steam Boilers, Chairman of the Board of Examiners of Operating Engineers, and of the Inspector of Apprenticeship; Annual Report of the Minimum Wage Board. *Booklets.*—Department of Labour of Ontario; Why Certificates for Stationary and Hoisting Engineers?; Boilers, Engines, Turbines, Condensers, Pumps; Refrigeration and Air Compression; Combustion; Beginners' Book on Power Plant Operation; Survey of Industrial Welfare in Ontario.

Lands and Forests.—(Free distribution.) Annual Report. Folder on Northern Ontario Settlers' Lands and Colonization. Folder on Summer Homes, Tourists and Campers in Ontario. The Forest Trees of Ontario *(25 cents)*. Woodlots of Ontario. Tree Planting, Ontario. Water Powers of Ontario *(50 cents)*. The Ferguson Highway. The Sault Ste. Marie-Pembroke Road. Gathering Pine Cones. Trees for Schools. Northwestern Ontario Highways and Tourist Attractions. Forest Resources of Ontario.

Mines.—The Mining Act, R.S.O., 1927, with Amendments from 1928 to 1934 inclusive. Handbook—Ontario's Mines and Mineral Resources, Fifth Edition, 1931. Bulletin 98, Preliminary Report of the Mineral Production of Ontario in 1934; Report of Royal Ontario Nickel Commission, 1917; Report of Ontario Iron Ore Committee, 1923; Volume XXX, Part II, Ontario Gold Deposits; Volume XXXIII, Part II, 1924, Porcupine Gold Area; Final Report of Joint Peat Committee, 1925; Volume XXXVII, Part II, 1928, Kirkland Lake Gold Area; Volume XLIII, Part I, 1934, Statistical Review and Mines of Ontario in 1933; Bulletin No. 25, List of Publications (Third Edition), giving all reports issued up to March, 1932; Bulletins Nos. 80 and 93, Money and the World Crisis; Bulletin No. 83, Twenty-five Years of Ontario's Mining History; Prospector's Guide to Ontario Mining Fields, 1934.

Premier.—Reports of the Liquor Control Board of Ontario and the Temiskaming and Northern Ontario Railway Commission. Tourists' Handbook. Report of the Queen Victoria Niagara Falls Park Commission.

Provincial Secretary.—Annual Reports: Ontario Board of Parole; Prisons and Reformatories; Annual Report of the Secretary and Registrar of the Province of Ontario (this report is presented to the Legislative Assembly each year, but has not been printed for several years). The Companies Act, including the Extra-Provincial Corporations Act. The Mortmain and Charitable Uses Act and the Companies Information Act. The Marriage Act. Physicians' Pocket Reference to the International List of Causes of Death. Annual Report of Births, Marriages and Deaths. The Physicians' Pocket Reference to the International List of Causes of Death is published by the Dominion Bureau of Statistics but copies are kept in this Branch for purposes of distribution.

Public Works.—Annual Report of the Minister, with reports of the Deputy Minister, Architect, Engineer, Secretary and Accountant.

Treasury.—Annual Statements; Main, Supplementary and Further Supplementary Estimates of Expenditure; Public Accounts; Budget Address of Treasurer delivered in the Legislative Assembly; Auditors' Report; Report of the Board of Censors of Motion Pictures.

MANITOBA.

Agriculture.—*Booklets.*—Annual Crop and Live Stock Reports. *Bulletins and Circulars.*—Alfalfa and Sweet Clover Growing in Manitoba; Sweet Clover; The Trench Silo; Making Silage in Manitoba; The Canada Thistle; Leafy Spurge; Noxious Weeds Act; How to Kill Couch Grass; Annual Forage Crops for Manitoba; Dog Mustard; Stinkweed and Common Wild Mustard; The Russian Thistle; The Rehabilitation of the Drought Area; An Agricultural Program for Southwestern Manitoba; Questions and Answers about the Sow Thistle; Control of Wild Oats; Preparing Grain for Exhibition Purposes; The Root Crop in Manitoba; Forage Crop Calendar; Prevention of Cereal Smuts; Growing Better Potatoes; Milk and Cream Tests; Cream Profits; Farm Butter-Making; Cheese-Making on the Farm; The Cream Separator on the Farm; Home Made Brooders; Hatching, Brooding, Rearing and Feeding Chicks; Horses in Manitoba; Sheep in Manitoba; Have You Dehorned your Market Cattle?; Producing Onions in Manitoba; Asparagus Growing in Manitoba; Growing Sweet Corn; Growing and Using Tomatoes; Manitoba Fruit List; Growing Raspberries in Manitoba; Making and Caring for Lawns; Use of Bulbs for Winter Bloom; The Peony; The Gladiolus; Shrubs for Manitoba; Success in Growing Annuals; Growing Vegetables in Manitoba; Vegetable Insects and their Control; Growing Better Rhubarb; The Gladiolus for Exhibition; Debates and Public Meetings; Meat-Curing Recipes; Help for the Home Dressmaker; Fitting and Alteration of Dress Patterns.

Education.—Annual Report; Consolidation of Schools; Program of Studies, Elementary and Senior; Public School Act; Regulations.

Municipal Commissioner.—Statistical information respecting the Municipalities of the Province; Tax Arrears and other Information, and list of names and addresses of Administrative and Health Officials of each Municipality. Report of Municipal and Public Utility Board. Manitoba Tax Commission.

Public Works.—Annual Report, included in Sessional Papers. Report of Insurance.

Attorney General.—Annual Report. Government Liquor Commission. Workmen's Compensation Board. Annual Report of Manitoba Telephone System.

Provincial Treasurer.—Public Accounts; Treasury Board Report; Estimates; Budget Speech; Report of Manitoba Farm Loan Association; Rural Credits Association Report.

Provincial Secretary.—*Manitoba Gazette*; Journals and Sessional Papers. Statutes of the Province.

Mines and Natural Resources.—Manitoba Mines and Minerals; Mining Maps; Sectional Land Maps.

Health and Public Welfare.—Annual Report; Manitoba Mother: Monthly Pre-natal and Post-natal letters; Manitoba Baby; Manitoba Child; Child Study Material for small community groups; Patterns for Infants' Layettes *(10 cents)*; Regulations *re* Boarding Homes for Children, Maternity Homes, and Day Nurseries; Quarantine Regulations; The Common Cold; Measles; Scarlet Fever; Diphtheria; Diphtheria Immunization; Whooping Cough; Trachoma; Typhoid Fever; Health Training Material for Teachers.

Publications issued by the Dominion Department of Pensions and National Health, The Canadian Council on Child Welfare, The Canadian National Institute for the Blind, also used in educational service.

SASKATCHEWAN.

Agriculture.—Annual Report of the Department of Agriculture. Annual Reports of Branches, etc.: Dairy, Live Stock, Field Crops, Statistics, Bee Division Report, Extension Department of College of Agriculture. Commission Reports: Live-Stock Marketing, Better Farming, Wheat Marketing. Bulletins and leaflets on Live Stock, Field Crops, Dairying, Farm Buildings, Tillage Methods, etc.

Other Publications.—Sessional Papers. Annual Reports: Bureau of Labour and Public Welfare; Department of Education; Department of Highways and Transportation; Department of Municipal Affairs; Department of Provincial Secretary; Department of Public Works; Department of Public Health; Department of Telephones; Department of Natural Resources; Local Government Board; Public Accounts; Cancer Commission; Research Foundation; Mental Hospitals; The *Saskatchewan Gazette.* By Bureau of Publications: Weekly News Bulletin; Pamphlets on Saskatchewan—Legislation, Natural Resources, etc.

ALBERTA.

Agriculture.—Annual Report of the Department of Agriculture; The Ploughing Match; Sowing Good Seed; Weeds of Alberta; Weeds Poisonous to Live Stock; Soil Cultivation; Destruction of Gophers; Sheep in Alberta; School Fairs' Calendar; Agricultural Schools' Calendar; Turkey Breeding and Management; Fur-bearing Animals and their Management.

Attorney General.—Annual Report on Dependent and Delinquent Children.

Education.—Annual Report; Courses of Studies for Elementary Schools; Regulations *re* Public School Leaving Examinations; Regulations *re* Examinations for Secondary School Grades; Handbook for Secondary Schools; Promotion Tests for Grades V, VI, VII, VIII and IX; Departmental Examinations for Grades X-XII; Pamphlets on Picture Study; Architecture and Sculpture; Summer School Announcement; Courses of Studies and Examinations for Commercial Diplomas; Normal School Announcement; Night Class Instruction in Mining Centres; Technical Education in Mining Centres; Bulletin and Regulations covering School Buildings in Rural and Village School Districts; Series of Plans and Specifications for Teachers' Residences; Series of Plans for One- and Two-Roomed Schools, with Specifications; The Certification of Teachers in Alberta; Annual Announcement of the Provincial Institute of Technology and Art; Courses of Study for Pre-Vocational Classes; Courses of Study for Technical High Schools; School Act; Geography Manual for High Schools; Physical Education for Rural Schools; Physical Education for Secondary Schools; Rural Education in Alberta; High Schools Civics; Seat Work Problems for Junior Grades.

King's Printer.—*Alberta Gazette.*

Lands and Mines.—Annual Report; Annual Report of the Chief Inspector of Mines; Alberta Oil Conditions, 1932; Handbook for information of public containing information on the following: the Survey System, Homestead Entries, Grazing on Provincial Lands, Hay Permits, Cultivation Permits, Irrigation, Leasing for Recreation Grounds or Exhibition Sites, Timber Licences and Permits, Timber Permit Berths, Fire-Killed Permit Berths, Damaged Timber Berths, Liability of Persons cutting Timber without Authority, Permit Dues, Telegraph and Telephone Poles, Mining Timber Dues, Persons Exempted from Timber Dues, Timber for Homesteads, Fur-Farming Leases, Issue of Permits to Mine Coal, Coal-Mining Leases, Petroleum and Natural Gas Regulations, Carbon-Black Permits, Placer Mining, Quartz Mining, Permits to remove Sand, Stone and Gravel from Beds of Rivers and Lakes, Dredging Leases, Disposal of Bar-Diggings, Alkali-Mining Regulations, Potash Regulations, Regulations for disposal of Bituminous Sand Deposits, Regulations for Leasing of Lands containing Limestone, Granite, Slate, Marble, Gypsum, Marl, Gravel, Sand, Clay, Volcanic Ash or any Building Stone, Forest Reserve Regulations, Fishing Regulations, Schedule of Fees.

Municipal Affairs.—Annual Report of Department; List of Alberta Municipalities; Report of the Alberta Assessment Commission Triennial Assessment, 1931-33.

Public Health.—Annual Report of Department; Annual Report on Vital Statistics. Bulletins issued monthly on various health subjects. Pamphlets regarding infectious diseases—Diphtheria, Scarlet Fever, Measles, Whooping Cough, Smallpox, etc. (in different languages). Public Health Bulletin for Teachers; Alberta Mothers' Book; Mouth Health; "What you should know about Cancer" (book); General Information regarding Tonsils; Health Rules for School Children; Hints on Home Nursing; Goitre; Systems of State Medicine (book).

Public Works.—Annual Report.

Publicity.—Official Highway Map of Alberta; Statistics of Progress, 1906-28; Alberta tourist literature.

Treasury.—Budget Speech containing extracts from Public Accounts and other financial statements; Public Accounts.

Other Publications.—Annual Reports are also issued by the following Departments and Branches: Railways and Telephones, Treasury (Insurance Branch), Board of Public Utilities, Labour Bureau, Lands and Mines.

BRITISH COLUMBIA.

Agriculture.—*Dairying.*—(5) Varying Butter-Fat Test; (71) Butter-Making on the Farm; (2) Farm Cheese; (12) Rules Governing Cow-testing Associations in B.C.; (4) Clotted Cream; (17) The Story of Feed Unit; (20) First List of Dairy Sires; (22) Second List of Dairy Sires; (25) Third List of Dairy Sires; (24) First Studies in Mendelism; (6) Care of Milk and Cream; (26) Certified Milk and Butter-Fat Records, 1932; (1) Ropy Milk in B.C.; (13) A Farm Dairy Sterilizer; (9) Dairy Farm Sterilizing Equipment. *Diseases and Pests.*—(45) Anthracnose; (39) Apple Aphides; (4) Apple-Scab; (34) Woolly Aphid of the Apple; (38) The Lesser Appleworm: (32) Cabbage-Root Maggot; (37) The Imported Cabbage-Worm; (2) Colorado Potato-Beetle in B.C.; (35) Currant Gall-Mite; (68) Diseases and Pests of Cultivated Plants; (66) Fire-Blight; (63) Locust-Control; (61)

CHAPTER XXX.—THE ANNUAL REGISTER, 1932-33 AND 1934.

Section 1.—Dominion Legislation, Fourth Session, Seventeenth Parliament, Oct. 6, 1932 to May 27, 1933.

Finance and Taxation.—Five Appropriation Acts were passed during the session, *viz.*, cc. 1, 11, 20, 22 and 55. C. 1, 23-24 Geo. V., granted the sum of $1,534,957.08 towards defraying the several charges and expenses of the public service for the fiscal year ending Mar. 31, 1933, as set forth in the Schedule of the said Act. C. 11 granted the sum of $54,380,349.93 towards defraying the several charges and expenses of the public service for the fiscal year ending Mar. 31, 1933, as set forth in the Schedule accompanying that legislation. C. 20 granted the sum of $16,220,422.36 towards defraying the several charges and expenses of the public service for the fiscal year ending Mar. 31, 1934, being one-twelfth of the several items to be voted, set forth in the Estimates for the said year. C. 22 granted the sum of $16,220,422.36 towards defraying the several charges and expenses of the public service for the fiscal year ending Mar. 31, 1934, being one-twelfth of the several items to be voted, set forth in the Estimates. C. 55 granted the sum of $162,202,843.59 towards defraying the several charges and expenses of the public service for the fiscal year ending Mar. 31, 1934, being five-sixths of the items to be voted, set forth in Schedule A to the said Act. Two further sums of $9,836,970.00 and $2,087,964.56 were also granted for the aforesaid purpose, as detailed in Schedules B and C, respectively. This Act also authorized a Government loan of $200,000,000 for public works and general purposes.

The purport of c. 12 is to give the Governor in Council power to suspend that section of the Dominion Notes Act which provides that Dominion notes shall be redeemable in gold.

The Bank Act is amended by c. 23 postponing for a year the responsibility which is placed upon Parliament to revise the Bank Act every ten years. The amendment continued the charters of the banks to July 1, 1934. The charters under the Quebec Savings Banks Act are similarly extended by c. 28.

C. 43 authorizes the raising by way of loans such sums of money as may be required, not to exceed $750,000,000 for paying loans or obligations of Canada, and for purchasing and withdrawing from circulation unmatured securities of Canada, and for public works and general purposes.

Income Tax.—The purpose of c. 14 is to provide that Government servants resident outside of Canada be made liable for income tax. Also that when the assets or shares of a company, having undistributed income on hand at the end of 1929, are sold directly or through an intermediary to a company which issues shares, bonds, notes, or other like documents as fully paid up by capitalizing the said undistributed income, then on the redemption of such documents the company redeeming shall pay a tax of 4 p. c. on the amount of such document redeemed. That the time of filing information returns be advanced from Mar. 31, to the last day of February in each year. That the provisions of the said Act with respect to personal corporations be amended to make them more certain in their application. Section 10 of the amendments makes the Act retroactive in several of its features, and particularly the right of the Crown to collect taxes remaining unpaid through mistake, which is made retroactive to the date the Act came into force in 1917.

The special income tax of 10 p.c. levied on the salaries of the judiciary, of the commissioned officers of the Military, Naval and Air Forces, and of the R.C.M.P., is continued in force by c. 15 until Mar. 31, 1934. A further provision prescribes that any person liable to pay the said special tax may elect to be subject to the Salary Deduction Act in lieu thereof.

Income tax exemption is reduced by c. 41 to $2,000 for married persons, widows or widowers with dependent child, and persons maintaining domestic establishments and supporting persons related by blood, marriage, or adoption. For all other persons the exemption provided is $1,000. The exemption for a dependent child or grandchild is $400 and for a dependent parent, grandparent, brother or sister is the actual amount expended up to $400. A new schedule of rates is provided. Where a husband and wife each have a separate income in excess of $1,000, they are each allowed an exemption of $1,000. It abolishes the exemption of $2,000 afforded corporations and joint stock companies and raises the tax to 12½ p.c. Such companies filing consolidated returns are made subject to a tax of 13½ p.c. on consolidated income. Corporations are exempted from additional tax in respect of incomes in excess of $5,000. Additional tax of 5 p.c. is imposed on non-residents of Canada in respect of dividends received from Canadian debtors, and interest from Canadian debtors if payable solely in Canadian funds except from bonds of, or guaranteed by, the Dominion of Canada. Additional tax of 5 p.c. is imposed on residents of Canada, except municipalities or municipal or public bodies performing governmental functions, in respect of interest and dividends paid by Canadian debtors to such persons at a premium over par of Canadian funds. Provision is made that where the Minister decides that individual profits of a corporation are in excess of reasonable requirements he may notify the corporation of the amount considered excessive and charge shareholders on same. The property of private investment holding companies is taken out of the operations of s. 19 (1) of the Act as enacted by s. 4 of c. 24, 1930. Persons making payments to non-residents on account of rents or royalties shall deduct from every such payment in excess of an amount to be named by the Minister, 12½ p.c. In computing the amount of profits to be assessed, no deduction is allowed for carrying charges of property, the income from which is exempt, except to the extent that the said charges exceed the exempt income. When any salary, bonus, commission, or director's fee is excessive in the opinion of the Minister, it may be disallowed as an expense. Debtors paying interest on fully registered bonds or debentures are to make a return of interest so paid. An ownership certificate is to be completed before a bearer coupon or warrant is negotiated by or on behalf of a resident of Canada. Several penalty clauses were added to the Act.

National Revenue.—C. 6 is an Act to amend the Customs Tariff, Schedule A, implementing the Canada-United Kingdom Trade Agreement.

The power of the Governor in Council to authorize the Minister to fix the value for duty on goods imported into Canada, under such conditions as injuriously to affect the interests of producers or manufacturers, is withdrawn by c. 7 so far as goods coming under the British preference or any lower tariff is concerned.

C. 8 reduces the excise duty on spirits, when made from unmalted grain or sugar, from $9 to $7 per gallon; when made from malted grain, from $9.02 to $7 per gallon; when made from molasses syrup, from $9.03 to $7 per gallon. The period for which abatement is allowed, for shrinkage by evaporation while maturing, is extended to fifteen years. Excise duty on cigarettes made from raw leaf tobacco is reduced from $6 to $4 per thousand.

C. 37 gives the Governor in Council authority to determine, from time to time, in computing the value for duty on imports, the rate of exchange of currency of any country whose currency is depreciated. Where the amount paid for imported goods from a country with a depreciated currency is less than the value computed at the determined rate of exchange, a duty is added amounting to the difference. Where goods are imported when importer and exporter have joint ownership the transaction is to be regarded as a sale and the price fixed is to be the value of the goods in the currency of the export country converted into Canadian currency at the rate determined as above. Schedules A and C of the Act are also amended.

C. 38, a Customs Act amendment, defines "value for duty" and provides for the granting of special permission for lightening vessels on statutory holidays other than Sundays, etc., vests officers with boarding and searching powers, and authority to seize vessels engaged in smuggling or smuggled goods. Penalties in such cases are increased.

C. 40 amends the Excise Act as follows: Jurisdiction for trial of offender is transferred from county court judge to police or stipendiary magistrate or two justices of the peace. Penalties recovered under Act may be paid to the Commissioner, R.C.M.P., Ottawa, or any officer commanding a division of the R.C.M.P. A Schedule is substituted for present provision to indicate the amount of the bond necessary for a licence to carry on business of distiller. Excise duty is imposed on spirits as follows: on those of proof strength, $7 per gallon, and so in proportion for greater or less strength and quantity. For spirits in medicine $2.50 per gallon of proof strength. When spirits of not less than 50 p.c. over proof are sold to a university or scientific and research laboratory or hospital, a drawback of 99 p.c. may be granted under regulations prescribed by the Minister. For spirits from juices of native fruits, $1 per gallon of proof strength. For perfume, $1.50 per gallon of proof strength. Duty to be paid on spirits used by druggists, $2.50 per gallon of proof strength. Spirits re-warehoused to be subject to the same abatement as if originally warehoused, but full warehousing not to exceed 15 years. The Governor in Council is given the right to make regulations for vatting, etc., of spirits and to provide an abatement of 1 p.c. of the quantity of spirits taken for such purpose. The Governor in Council may make regulations for the bottling of spirits in bond. Least quantity of spirits removable from distillery is reduced to five gallons. A penalty clause is provided for distilling without a licence, the minimum penalty being a fine or imprisonment, or both fine and imprisonment.

Under c. 50 notes of Canadian banks circulating in British possessions other than Canada are exempt from the tax imposed under s. 3 of the Special War Revenue Act to the amount required to pay tax levied by such possession. A purely mutual insurance company deriving not less than fifty p.c. of its net income from the insurance of farm property is exempt from the provisions of the Act. Cheques, postal notes and money orders issued to a producer for milk or cream, or eggs or poultry, to co-operative wool-growers for wool, and by municipalities for employment relief, are exempt from the stamp tax. Provides an excise tax on cheques, bills of exchange or promissory notes drawn out of Canada; 3 cents up to $100 and 6 cents above that amount. The stamp tax on receipts for money paid by bank against a deposit to the recipient's credit is 3 cents up to $100, and 6 cents over $100. Stocks, bonds, etc., or participating interest therein capable of being sold are made liable to the tax on sale of stocks, etc., set forth in the Act and certain changes are made in the exemptions from this tax. The tax on express company money orders, Post Office

money orders, and travellers cheques is to apply on amounts under $5. The tax on matches lowered on small packages. A tax of 2 cents is levied on each one hundred cigarette papers or fraction thereof. A tax of 4 cents is levied on each one hundred cigarette paper tubes or fraction thereof. Cigarette papers and cigarette paper tubes are to be imported and sold in packages. Cigarette papers and tubes are not to be taxed when exported. Ale, beer, porter, and stout exported in bond not taxable when landing certificate produced. Tax on sugar, etc., remitted when imported or bought in bond for further manufacture, but payable when later sold. A tax is imposed on the sugar content of goods imported. Price for sales tax not to include sales tax, but shall include other excise duties when goods sold in bond, and also taxes imposed by Part X and Part XII of the Act. Sales tax on imported goods to be on duty-paid value. Wholesaler who sells for a price less than the value computed under the Act is liable for difference. Current market value of raw furs may be determined by the Minister. Drawback of 90 p.c. of taxes imposed by Part XI of Act upon tires and rubber, etc., exported. Amendments are also made in regard to records and penalties for tampering with same, refunds, etc., and to the Schedules.

The annual salary of the Chairman of the Tariff Board is fixed at $15,000, and those of the other two members at $10,000, by c. 51. Pensions are provided as follows: for ten years service, annuity of one-fourth of annual salary received during such period; for less than ten and more than five years service annuity of one-fifth of annual salary received during such period. However, if member serves full ten years and is 64 years of age he may be granted annuity of one-half of annual salary.

Agriculture.—By the Hay and Straw Inspection Act (c. 26), the Minister of Agriculture is given power to make regulations respecting the quality of hay and straw, and to appoint inspectors and empower them to issue certificates of quality. Ss. 156-165 of Inspection and Sale Act are repealed.

Civil Service.—The Salary Deduction Act, 1933 (c. 19), extends salary deductions of 10 p.c. to Mar. 31, 1934. Deduction is also to apply to indemnities of members of Senate and House of Commons for the session which commenced Oct. 6, 1932. Income as reduced by said reduction is to be subject to income tax.

External Affairs.—By c. 39—The Extra-Territorial Act, 1933—Acts of the Dominion Parliament in force previous to the passing of the Statute of Westminster and purporting to have extra-territorial operation, are to be construed as if the Dominion Parliament had then had power to pass laws having such operation.

Immigration and Colonization.—C. 49 amends the Soldier Settlement Act; all interest charges for the year preceding standard date in 1932 are remitted, or applied on principal where already paid. This, however, does not, except under certain conditions, apply to payments in respect of contracts dated Aug. 20, 1924, made under agreement between the United Kingdom and the Dominion. Any payments made between Mar. 31, 1933, and Mar. 31, 1936, for arrears or instalments due, or due within one year thereafter, are to be accepted for double the amount so paid. This credit is not accorded in respect to money, the proceeds of alienation, fire insurance, or payment under agreement for sale. After Mar. 31, 1933, the Director is to release title to equipment under certain conditions.

Indian Affairs.—C. 42 is an amendment to the Indian Act whereby members of the R.C.M.P. are to be truant officers on reserves. No Indian, or band, or irregular band of Indians is to sell cattle or other animals, or grains, root crops, or other produce from any reserve without the consent of the Indian Agent. The

Superintendent General is to determine where roads are to be on a reserve. Operations of hawkers, etc., are to be regulated by chiefs in council subject to confirmation by Governor in Council. Provision is made for Indians to be enfranchised without application on their part. Anyone found on a reserve who is unable to prove a legitimate reason for presence is liable to fine and imprisonment.

Insurance.—By c. 32, the Canadian and British Insurance Companies Act is amended to extend investments to include bonds or debentures secured by annual payment of Dominion Government.

Interior.—The Migratory Birds Act is amended by c. 16, providing for the deletion of provision for the printing of regulations in the prefix of the Dominion Statutes. Members of the R.C.M.P. are to be game officers.

Justice.—The Criminal Code is amended by c. 25; carrying of firearms without a permit is made an indictable offence and punishment increased to five years imprisonment. All other punishments in regard to firearms and dangerous weapons are made more severe.

The Penitentiary Act is amended by c. 27 whereby the Governor in Council is given power to appoint a Superintendent and three Inspectors of penitentiaries, wardens and other executive officers. The Superintendent is empowered on recommendation of a warden to appoint subordinate officers to serve in penitentiaries. All other employees of the Penitentiary Branch to continue under the Civil Service Commission. Changes in regard to gratuities to employees. Period of confinement of convict pending an appeal by the Attorney General or Council for the Crown to count as time served.

The Criminal Code is amended by c. 53 as follows: Definition of prize fight changed to exclude contests between amateurs with not less than five-ounce gloves, and contests held under authority of a Provincial Athletic Board. Signing and using false affidavits is made an indictable offence. Irrebuttable presumption created of corruption of child in own home when court is of opinion that conditions are such that child might be in danger of becoming immoral. Throwing of stench bombs, etc., in a place of usual resort is made an indictable offence, punishable by imprisonment of not less than two and not more than five years. Changes are made in procedure of appeals in Ontario; in provisions for summary trial with consent; Quebec and British Columbia are added to the provinces in which a grand jury indictment is not necessary. A change is also made in the provisions respecting when the time of sentence is to start for persons on bail or confined awaiting appeal; unconvicted persons are removed from the operation of said provisions.

The Exchequer Court Act is amended by c. 13 as regards: Writs of Habeas Corpus ad Subjiciendum, etc., in relation to any officer or man of the Canadian Naval, Military or Air Force serving outside Canada, which are to be exclusively heard by the Exchequer Court. Any such writ is to be directed to the Minister of National Defence, who shall transmit terms of same to the appropriate authourity who shall comply therewith.

By c. 29, amending the R.C.M.P. Act, all money earned by a member of the Force over and above his salary is to be paid to the Minister, except when the Minister otherwise directs. All N.C.O.'s and men of the Force are subject to reduction in rank. The Governor in Council may determine the amount of allowances for purposes of pension.

Labour.—The Relief Act, 1933 (c. 18), enacted for a period of one year, gives power to the Governor in Council to make agreements with provinces respecting relief measures therein; to take all means deemed advisable to maintain peace, order and good government; to protect the financial position of the Dominion or any province; to provide special relief works in National Parks; to assist in sale and distribution of products. Moneys for direct relief not to exceed $20,000,000.

Marine.—C. 52 provides that the Minister may delegate duties as pilotage authority. Governor in Council to appoint inspectors of ships' tackle, who are also to supervise loading and unloading of ships. Governor in Council may make regulations for protection against accident in loading and unloading ships. Inspectors may order loading or unloading of ships to cease if employee is exposed to undue risk. Weight of packages of 2,240 pounds or over, consigned to be loaded on any ship, is to be marked. Governor in Council may make regulations regarding manner in which cargo is carried. No goods are to be carried from one port to another in Canada, either directly or by way of a foreign port, or for any part of the transportation, in other than British ships.

The Radio Broadcasting Act is amended by c. 35 which provides that appointments and salaries of technical and other officers are to be made by the Radio Commission, and those of other employees pursuant to the Civil Service Act. The acquisition and construction of stations are to be approved by Governor in Council instead of by Parliament. Moneys received by the Commission as well as moneys appropriated by Parliament may be expended by the Commission.

Parliamentary Representation.—Under the Representation Act, 1933 (c. 54 of the Statutes), The House of Commons is to consist of 245 members as follows: Ontario 82, Quebec 65, Nova Scotia 12, New Brunswick 10, Manitoba 17, British Columbia 16, Prince Edward Island 4, Saskatchewan 21, Alberta 17, Yukon Territory 1. Schedule A describes the new electoral districts. This Act takes effect upon the dissolution of the present Parliament.

Pensions and National Health.—The Pensions Act was amended by c. 45: The Board of Pension Commissioners and Pension Tribunals are abolished and the Canadian Pension Commission substituted. The commission is to consist of from 8 to 12 members at the discretion of Governor in Council. The Pension Appeal Court is continued. A Reviewing Officer is appointed with duty of deciding whether an appeal should be made on behalf of the Crown. Details of administration of the Pensions Act are amended in several respects.

Post Office.—The Post Office Act was amended by c. 46, subjecting newspapers and periodicals, having more than 50 p.c. of space devoted to advertisements, to pay postage at the rate of 4 cents per pound or any fraction thereof.

Railways.—C. 33 of the Statutes does away with the Board of Directors of the C.N.R., and substitutes three trustees. It also sets up machinery for co-operation between the C.N.R. and the C.P.R. It specifically stipulates that nothing in the Act shall be deemed to authorize the amalgamation of the two great railways.

C. 34—the C.N.R. Financing Act, 1933—gives that company power to issue notes to cover expenditures made during 1933, where net income insufficient. Power is also vested in the Minister of Finance to make loans to the company out of the Consolidated Revenue of Canada.

C. 47 amends the Railway Act, giving to a company power to abandon any line of railway with approval of the Board of Railway Commissioners and forbids any company to abandon any line of railway without such approval.

Trade.—By cc. 2, 3, 4, and 5 the several Trade Agreements made between Canada and the United Kingdom, South Africa, the Irish Free State, and Southern Rhodesia at the Ottawa Imperial Economic Conference were respectively approved by the Dominion Parliament.

Cc. 9 and 24 are amendments to the Canada Grain Act. By c. 9, any change in tariff for the handling, etc., of grains in elevators during crop year is prohibited except by order of the Grain Commissioners. C. 24 gives the Grain Board power to make regulations requiring the registration and cancellation of Eastern warehouse receipts and transfer receipts; also to make regulations governing the discharge of grain from a licensed public or semi-public elevator at a sea port. Eastern elevators are brought under the operation of s. 126 of the Grain Act. When Western grain is in an Eastern elevator, transfer receipts shall be issued but these are not negotiable. Subject to the regulations of the Board, these transfer receipts are exchangeable for Eastern warehouse receipts upon surrender of the bill of lading. Eastern warehouse receipts are brought under s. 127 of the Grain Act. Eastern warehouse receipts and transfer receipts are brought under the operation of s. 128. Eastern elevators are brought under the operation of s. 129. An amendment is made to s. 135 of the Act, making it subject to the other parts of the Act.

C. 30 approves the Convention between Canada and France concerning the rights of nationals and commercial and shipping matters, set out in the Schedule. C. 31 approves the trade agreement between Canada and France set out in the Schedule thereto.

C. 36 provides a method whereby the creditors of a company may be brought into court and permitted by amicable agreement between themselves to arrange for a settlement of the debts of the company, allowing the business to be continued for the benefit of all concerned.

The Governor in Council is empowered by c. 44 to extend duration of Trade Agreement between Canada and New Zealand dated April 23, 1932.

Miscellaneous.—C. 10 gives power to the Montreal Harbour Commissioners to pass a by-law to prohibit entry of vessel into the harbour without permission, and to levy a tax for operating within the harbour.

Under c. 17 the Agreement of Mar. 30, 1920, with the city of Ottawa is extended for one year from July 1, 1932.

The Visiting Forces Act (c. 21) makes provision with respect to discipline, command, etc.

C. 48 provides that senators may be contractors for the loan of money to the Government after public competition.

Section 2.—Dominion Legislation, Fifth Session, Seventeenth Parliament, Jan. 25 to July 3, 1934.*

Finance and Taxation.—Five Appropriation Acts were passed during the session, *viz.*, cc. 1, 2, 16, 23 and 62. C. 1 grants the sum of $30,073,471.87 towards defraying the expenses of the public service for the fiscal year ending Mar. 31, 1935, being one-sixth of the amount of the items to be voted, set forth in the Estimates for the said year. C. 2 grants the sum of $52,661,304.36 towards defraying the expenses of the public service for the fiscal year ending Mar. 31, 1934, set forth

*C. 44, the Canada Shipping Act, not having been proclaimed at the time of going to press, is not dealt with in this review.

in the Schedule thereto. C. 16 grants the sum of $15,036,735.93 towards defraying the expenses of the public service for the fiscal year ending Mar. 31, 1935, being one-twelfth of the amount of the items set forth in the Estimates for the said year. Two further sums of $2,237,789.69 and $888,000.00 are granted for the aforesaid purpose, said sums being one-fourth of the amount of the items set forth in Schedule A, and one-fourth of the amount of the items set forth in Schedule B, respectively. C. 23 grants the sum of $128,617,254.36 towards defraying the expenses of the public service for the fiscal year ending Mar. 31, 1935, being three-fourths of the amount of the items set forth in Schedule A thereto, excepting thereout one-half of the amount of the items set forth in Schedule B thereto. Two further sums of $4,475,579.37 and $2,664,000.00 are also granted for the aforesaid purpose, said sums being one-half of the amount of the items set forth in Schedule B, and three-fourths of the amount of the items set forth in Schedule C, respectively. This Act also authorizes a Government loan up to $200,000,000 for public works and general purposes. C. 62 grants the sum of $8,274,739.72 towards defraying the expenses of the public service for the fiscal year ending Mar. 31, 1935, set forth in the Schedule thereto.

C. 34 is an amendment to the Dominion Notes Act, raising the value of Dominion notes which may be issued on a 25 p.c. gold coverage from $50,000,000 to $120,000,000. Notes in excess of the latter figure are to be fully secured by gold. Silver purchased under the London Agreement of July, 1933, may be held as additional security. Provision is also made for repealing the Dominion Notes Act when the new Bank of Canada starts functioning, after which time all notes will be issued, except as provided by the Bank Act, under the authority of the Bank of Canada Act.

C. 30 makes provision for the repeal by proclamation of c. 4 of the Statutes of 1915, which provided for the issuance of $26,000,000 of Dominion notes, and c. 35 similarly makes provision for the repeal of the Finance Act, which provides for advances of Dominion notes being made to the chartered banks on the strength of such approved securities as may be deposited with the Minister of Finance. These Acts will be superseded by the Bank of Canada Act. (See p. 963.)

Income Tax.—C. 19 continues the special income tax of 10 p.c. on the salaries of members of the judiciary, and the commissioned officers of the military, naval and air forces and R.C.M.P. for the fiscal year ending Mar. 31, 1935. C. 55 amends the Income War Tax Act by adding rents, royalties, or other periodical receipts to the list of incomes taxable, particularized under clause 3. A company having assets and doing business solely outside of Canada is exempt from income tax only after making a return and paying a fee of $100. Clergymen under certain conditions are given the same exemption as married men, *viz.*, $2,000. Interest paid in respect of succession duties or inheritance taxes is exempted. A tax of 5 p.c. is imposed on non-resident parent companies in respect of interest paid by a subsidiary Canadian company, except when paid in currency other than Canadian by agreement dated prior to April, 1933. Income from estate or trust to pay 5 p.c. tax. Exemption of tax on dividends to non-resident parent company only applicable where shares owned by parent company have full voting rights, and this exemption to apply irrespective of amount of income derived by Canadian company from interest and dividends, provided same are paid by subsidiary company. Income accumulating in trust for unascertained persons is taxable as if such income were the income of a person other than a corporation, but exemptions provided under paragraphs c, d, e and i of s-s. 1 of s. 5 of the Act are not applicable. Income of deceased person payable periodically is deemed to have accrued by equal daily increment and that portion accrued to the date of death is to be taxed. Dividends received by an

estate or trust and capitalized, to be taxed. Money spent on maintenance of an estate in accordance with terms of a will or trust is to be taxed if in excess of amount prescribed by the Minister. Where a corporation is redeeming shares at a premium the tax to be paid on such premium. All distributions of property made on the winding up of an incorporated company are deemed to be dividends to the extent that the company has undistributed income on hand, except in the case of income received from British and foreign securities and interest-bearing securities of Canadian debtors by private investment holding companies, in which case the extent to which dividends are made up of income received from Canadian companies is set forth. When a Canadian company advances money to a non-resident company for a period of one year without interest, the Minister may determine the amount of interest deemed to have been received as income. The Governor in Council is given power to enter into reciprocal agreements with other countries to exempt their respective nationals from income tax. When a person transfers property to a minor under eighteen years of age he shall nevertheless pay tax on income derived from such property during the minority of such minor, and also afterwards unless the Minister is satisfied that the transfer was not made to evade tax. Some changes are made in the penalty clauses.

National Revenue.—C. 32 amends the Customs Tariff. "Proof" and "proof spirits" are re-defined. The *ad valorem* rate of duty on tea purchased in bond in the United Kingdom is not to include the custom duty payable on tea for consumption in the United Kingdom. Schedule A is extensively amended. C. 48 amends the Customs Act. Definition of "fair market" repealed. The Governor in Council may order that excise duties and taxes be disregarded. Penalty for entering a railway car carrying bonded goods is extended to breaking or abetting, or aiding in the breaking of locks on such cars. Signalling from ship or coast in aid of smuggling is a criminal offence punishable with fine and imprisonment. The onus of proof of innocent interest lies on the person making the signals. C. 49 amends the Customs Tariff by enacting that the Governor in Council may order that excise duties be disregarded in estimating the market value for the purpose of special duty when goods are entitled to free entry under the general tariff.

The Special War Revenue Act is amended by c. 42. Postal notes under one dollar are made subject to a stamp tax of 1 cent, and over one dollar to a 3 cent tax. The excise tax on cigarette paper tubes is reduced to 3 cents a hundred. The wholesale or retail dealer is to affix the stamp required if package of cigarette papers or cigarette paper tubes remain unstamped. The excise tax on ale, beer, porter, and stout is brought under the section providing that goods exported under regulations prescribed by the Minister are not to be subject to tax. The tax on sugar content of goods imported is reduced to 1 cent per pound upon sugar and sugar substitutes, and to ½ cent per lb. upon glucose or grape-sugar. The term "manufactured and produced in Canada" is to apply to any articles prepared for sale in Canada and the tax is to be levied upon the price the articles sold for in Canada. The tax on champagne and all other sparkling wines is reduced to seventy-five cents per gallon. The Minister is made sole judge as to whether goods are "partly manufactured goods" within meaning of s. 85. The current market value of furs is to be determined under regulations made by the Minister for the purpose of s. 86 of the Act. The excise tax of 3 p.c. on duty-paid value under s. 88 is reduced to 1½ p.c. on goods entering Canada under the British Preferential Tariff or under trade arrangements between Canada and other British countries. The drawback provided for by s. 94 of the Act is to include materials (not fuel or plant equipment) consumed in the

manufacture or production of any goods exported. The penalty for refusing to pay tax imposed by Parts IV to XIII is made additional to any other penalty prescribed by the Act. The penalty for contravening any requirements of Parts IV to XIII or any regulations of the Minister is limited to contraventions for which no other penalty is provided. The authority of an "officer" to make inquiries extends to the whole Act. A person collecting money on behalf of the Crown, who collects in excess of the required sums, is to pay that excess to the Crown and is liable to a penalty of $500. Prosecutions under the Act are to be commenced within three years from the time the cause of suit arose. A new Part (XV) is added to the Act, imposing a tax on gold producers. (See p. 395.) The remaining amendments are changes in the Schedules to the Special War Revenue Act.

C. 52 is an Act to amend and consolidate the Excise Act. The amendments make four important changes. First, the existing duty on malt is increased. This is done in conjunction with the repeal of the gallonage tax on beer imposed by the Special War Revenue Act, the effect being to lower the tax on beer. Second, the cost of home-brewed beer is similarly lowered by making the tax imposed on malt syrup a duty of excise while at the same time repealing the tax imposed on malt syrup by the Special War Revenue Act. Third, a Schedule of excise duties is appended for purposes of reference. Fourth, whenever any vehicle is seized or forfeited, anyone claiming an interest in same may within thirty days after seizure apply to any Judge of a Superior Court or the Exchequer Court for an order declaring his interest. This expedites the procedure and reduces the expense of obtaining redress.

Agriculture.—The Natural Products Marketing Act, c. 57 of the Statutes, sets up a Dominion Marketing Board, the members of which are to be appointed by, and to hold office during the pleasure of, the Governor in Council. The Board is given power over the marketing of those natural products which may be regulated under the Act, and also the power to prohibit marketing. It may exempt a person from its order, conduct a pool to equalize returns, give compensation for loss, assist by means of grants, provide for licence, require information, and co-operate with a provincial board. Upon the petition of a representative number of persons engaged in the production of a commodity, a local board may be created to regulate the said commodity under the supervision of the Board. The scheme will only be adopted if the principal market for the product is outside the province of production or if some part of the product may be exported. The procedure of adopting or revoking schemes under the Act is laid down. The Minister may authorize investigations into cost of production, wages, etc., in relation to production, etc., of natural products. Persons receiving a spread, detrimental to the interests of the public, or which is excessive, are liable to a fine not exceeding $5,000 or two years imprisonment, or if a corporation to a fine not exceeding $10,000. Whenever an investigating committee is satisfied that an offence has been committed, it is to remit evidence to Attorney General of the province within which the offence was committed. If such Attorney General does not take action within three months, the Attorney General of Canada may do so. The last section of the Act provides that if it is found that any provision of the Act is *ultra vires* that none of the other provisions of the Act are therefore to be inoperative or *ultra vires*.

C. 12 amends the Dairy Industry Act. The definitions are extended to include "dairy produce" and "dairy product" and the definition of "fats" is amended to include mineral fats as well as animal and vegetable fats. The Governor in Council is given the right to make regulations for the prescribing of standards for dairy products. A new subsection is added to s. 6, which makes it illegal to manu-

facture, or offer, sell or have, etc., any dairy product contrary to the provisions of Part I of the Act and regulations made thereunder. The clause prohibiting the placing of a foreign substance in cheese is extended to include all dairy products. The whole of Part II of the Act, dealing with the grading of dairy produce, is repealed and a new Part II substituted therefor.

C. 13 amends the Destructive Insect and Pest Act to make it clear that a province is free to make laws *re* insects and pests so long as such regulations are not repugnant to Dominion legislation on this subject.

C. 18 repeals the Fruit Act and substitutes in its stead a new Act entitled the Fruit and Honey Act. The most important change takes the definitions of grades, markings, etc., out of the Act, and gives to the Minister the right to make regulations thereon. There are thirteen sections defining offences in regard to grading, packing, etc. Varying penalties are imposed for infractions of the Act. Part III of the Act provides for the establishment of classes and grades, for boxing for both export and interprovincial trade, by regulations made by the Minister.

C. 20 amends the Live Stock and Live Stock Products Act. The "exporter" is defined as the owner of live stock or live-stock products shipped out of Canada, and the "exporting agent" as any person who, on behalf of the owner, ships live stock or live-stock products out of Canada. The Minister may, by notice in writing, forbid the shipping of cattle to Great Britain by an exporter or exporting agent unless a licence has been obtained. The necessity of being so licensed only arises upon notification by the Minister prohibiting shipping without a licence. The Minister is given the right to make regulations prescribing the manner in which operators of "public commercial vehicles" are to guarantee the proper return of proceeds to the owners of live stock or live-stock products. Regulations may also be so made regarding the manner in which a purchaser shall record receipts, etc., made at assembling points and abattoirs, and such records shall be made available to the Minister. If any live-stock exchange fails to comply with a requirement of the Minister in regard to the record of such receipts, etc., for a period of thirty days, the Minister may order the exchange to discontinue operations, in which event the business of the exchange will carry on under the direct authority of the Minister. No moneys are to be paid out of the "shippers' trust account" except in accordance with regulations approved by the Minister. The bank is specifically stated to have no responsibility in regard to the "shippers' trust account".

C. 26 amends the Canada Grain Act so as to exclude Garnet wheat from Grade No. 2 Manitoba Northern, and provides that this grade will consist of "Marquis or equal to Marquis". Garnet is given a separate grading as "No. 1. C.W. Garnet", and "No. 2. C.W. Garnet". Transfer receipts are to be issued by an Eastern elevator at an ocean terminal point for local delivery or export, but such receipts are not to be negotiable. In the Eastern Inspection Division an elevator may, if a transfer certificate has been issued and registered according to any regulations which may be current, discharge grain for shipment on surrender of receipt or bill of lading.

C. 46 is cited as the Canadian Farm Loan Act Amendment Act. The Farm Loan Board is given authority to pay local taxes on real estate; to accept additional security for loans; to make composition, extension of time, or scheme of arrangement with borrower; to make advances to borrowers for seed, fodder, fertilizer or harvesting expenses. The certificate of the Commissioner printed on every farm loan bond is changed to read that the Board holds "mortgages or charges on farm lands, and personalty". It previously read "mortgages on farm lands". The

maximum loan to be made under the Act is reduced from $10,000 to $7,500. Mortgages are subject to the law of the province in which the land is situated. If under mortgage sales proceedings, an amount insufficient to discharge the secured debt is realized, the stock in the Board held by the borrower is cancelled and the amount paid thereon forfeited to the Board. The amount of bonds the Minister may purchase is increased from fifteen million to forty million dollars. Such bonds are to be repurchased only at the request of the Minister. The Governor in Council may authorize the guarantee of the principal and interest of Farm Loan Boards up to thirty million dollars. Several new provisions in regard to farm loans are added by Part II, which deals with supplementary advances by the Board. A farmer who has already given a first mortgage to the Board is to make a further loan by giving to the Board a second mortgage. This second loan is to be made for a period of not more than six years, repayable on such terms as the Board may determine. The security is to be a mortgage on the farm lands, and a charge on live stock and other personal property. The aggregate of loans made to any one borrower under this Amendment Act and the Canadian Farm Loan Act is not to exceed two-thirds of the appraised value of the land and buildings, and is not to exceed at any time $7,500, and the amount advanced under this Part is not to exceed half the amount secured by the first mortgage. The purpose of the second loan is to enable the farmer to pay existing debts, to buy necessary equipment, to make permanent improvements, and for such other purposes as the Board approves. A mortgagee under the Act is defined and stipulations regarding: rate of interest; procedure in case of composition, etc., under the Farmers' Creditors Arrangement Act, 1934; extension of time for repayment, etc., are made. Money for loans may be provided out of the Consolidated Revenue Fund.

C. 53 is the Farmers' Creditors Arrangement Act, 1934. The purpose of this Act is to provide a means whereby arrangements may be effected of debts of farmers who are unable to pay, and thus retain the farmers on the land as efficient producers. Under the Act a farmer unable to meet his liabilities may make a proposal for a scheme of arrangement. This proposal is filed with the Official Receiver appointed under the Act, who will convene a meeting of creditors. When a proposal is not approved by the creditors it may be referred to the Board of Review, appointed under the Act, which Board shall formulate a proposal. If this proposal is approved, it shall be binding on all, but if it is not approved, the Board may nevertheless confirm it, when it shall be binding. The Board may refuse to formulate a proposal where it considers no fair proposal can be formulated. When a proposal has been confirmed by the Board, Part I of the Bankruptcy Act shall thereafter apply to the farmer and a failure to carry out the proposal will constitute an act of bankruptcy on his part. S. 17 of the Act provides that when the interest rate in any mortgage exceeds 7 p.c., the person liable to pay the mortgage may pay the principal and interest owing to date together with three months further interest, and thereafter no interest will be recoverable at any rate in excess of 5 p.c.

Banks and Banking.—C. 24 is the Bank Act. It renews the charters of the ten chartered banks for ten years to July 1, 1944. La Banque Provinciale du Canada and Banque Canadienne Nationale may do business under the respective names: "The Provincial Bank of Canada" and "National Canadian Bank". The Act does not apply to the new Bank of Canada, except as it is specially mentioned in the Act. The chartered banks are required to maintain with the Bank of Canada at least 5 p.c. of their deposit liabilities within Canada. This reserve is to be in Bank of Canada notes and deposits in the Bank of Canada. After the commence-

ment of business by the Bank of Canada, the maximum amount of notes of a chartered bank shall not exceed the amount of its paid-up capital. This maximum amount will be reduced annually by 5 p.c. for a period of five years commencing Jan. 1, 1936, and by 10 p.c. for a period of five years commencing Jan. 1, 1941. Chartered banks are not allowed to charge a higher rate of interest or discount than 7 p.c.; penalties are to be enforced for violation of the Act in this respect. As the note-issuing privilege of a chartered bank is withdrawn, the liability of a shareholder in the bank shall not exceed that proportion of the par value of the shares held by him which the amount of notes which the bank is authorized to have in circulation in Canada bears to the paid-up capital of the bank. Slight changes are made in the monthly statement of assets and liabilities.

C. 43, the Bank of Canada Act, is an Act to incorporate the Bank of Canada, and provides for the establishment in Canada of a central bank. The gist of this legislation is given on p. 963.

C. 39 renews the charters of the Montreal City and District Savings Bank and of La Caisse d'Economie de Notre-Dame de Québec and enacts that they shall remain in force until July 1, 1944. It also amends the Quebec Savings Bank Act as follows: Publication of notice may be by publication each week in a weekly newspaper, or once a week in a newspaper published more frequently. The limitation on the amount which may be deposited by any persons not by the laws of the province authorized to make such a deposit is repealed. A garnishee order only attaches money to the credit of the debtor at the branch where it is served. The bank shall always hold at least 20 p.c. of the moneys deposited with it on deposit in chartered banks in Canada, or in the Bank of Canada. The Bank of Canada is added to the chartered banks as a place where deposits may be made by the bank. The Inspector General of Banks shall make an examination of the business of the bank at least once a year. Expenses of such examination to be paid out of the Consolidated Revenue Fund if appropriation therefor has been made and said Fund shall be recouped by assessment upon the banks. When a deposit is subject to a trust of which the bank has notice, the receipt or cheque of the person, or if two or more persons the receipt or cheque of all, or those of them entitled to receive under the document creating the trust, shall be a sufficient discharge of all concerned. Except only when lawfully claimed by other persons, the receipt or cheque of a person in whose name a deposit stands, or if it stands in the name of two persons the receipt or cheque of one, or if it stands in the name of more than two the receipt or cheque of the majority, shall be a sufficient discharge of all concerned. An annual return of shareholders is to be made within twenty days after the close of each calendar year. An annual return of unpaid dividends is to be as at the end of each calendar year. The person appointed by the Minister under s. 48 of this Act shall be deemed to be an officer of the bank within the meaning of s. 67. Bank of Canada notes are substituted for Dominion notes in s. 69. Item 2 of assets in the Schedule is amended to read "Cash in hand and on deposit in chartered banks, or in the Bank of Canada".

Civil Service.—C. 25 is the Translation Bureau Act. It establishes a Bureau for Translations under the Secretary of State, the function of which is to collaborate with all Government Departments and agencies in making translations from one language into another. All employees of the public service chiefly engaged as translators may be transferred to the Bureau. The Bureau is to be under the supervision of a Superintendent appointed under the Civil Service Act.

C. 22 is The Salary Deduction Act, 1934. It provides for the deduction of 10 p.c. from the compensation of members of the public service, except the Governor

General, the Lieutenant-Governors of the provinces, the members of the judiciary and of the Naval, Military and Air forces, and the R.C.M.P. Members of the Senate and the House of Commons are included as well as members of the commissions, etc., created by the Government, other than the C.N.R. A proviso, however, is added which provides that the Act shall not operate to reduce the compensation of any member of the public service below $1,000 per annum, and further that such deductions shall not apply to any member whose compensation during such fiscal year is not more than $1,000. The deduction applies to the indemnities of the Members of the Senate and the House of Commons only for the session which commenced Jan. 25, 1934. The basis of superannuation benefits is not reduced by this Act, nor is the gratuity or retiring allowance of a penitentiary employee. Payments under the Superannuation Act or the Superannuation and Retirement Act of an employee receiving not more than $1,200, which compensation is subject to deduction, shall be paid out of the Consolidated Revenue Fund.

External Affairs.—C. 31 is the Admiralty Act, 1934. This Act does not come into force until promulgated by Order in Council and published in the *Canada Gazette*. It repeals and takes the place of the old Admiralty Act, c. 33, R.S.C., 1927, which latter Act derived its jurisdiction from the Acts concerning Admiralty passed by the United Kingdom Parliament. Thus Canada has taken over jurisdiction in admiralty in accordance with its new authority, defined by the Statute of Westminster and by the repeal of the Colonial Laws Validity Act. The Act is made to conform as far as possible to the Admiralty Court legislation of the United Kingdom, subject to such variations as are required in matters of purely local and domestic interest.

Fisheries.—C. 6 amends the Fisheries Act by providing that regulations respecting licences may be made under s. 34 of the Act, instead of under s. 33.

Indian Affairs.—C. 29 amends the Indian Act. Order in Council of July 12, 1906, provided that the division of the Caughnawaga Indian Reserve into sections be done away with. There was no statutory authority for this Order in Council and this Act validates all acts and proceedings pursuant to the said Order in Council. It furthermore grants to the Governor in Council the power to divide a reserve into sections, not to exceed six, or to provide that the reserve shall form one section, the wishes of the Indians being first ascertained.

Insurance, Loan and Trust Companies.—C. 27 amends the Canadian and British Insurance Companies Act. Its purpose is to secure to life insurance companies carrying on business in Canada the right to obtain licences from the Insurance Department. It, however, involves insurance companies other than life. The amendments make it clear that it is not intended to impinge on the exclusive jurisdiction of the Provincial Legislatures in regard to insurance, but that it is intended only to control insurance companies from the point of view of insolvency and bankruptcy, over which the Dominion Parliament has jurisdiction. It provides for the compulsory registration and licensing of Canadian and British companies, and for the voluntary registration of Canadian companies. C. 45 amends the same Act by adding a new paragraph regarding the investment of an insurance company's funds. C. 36 is an amendment to the Foreign Insurance Companies Act. It is really a companion Act to c. 47 above, and its object is to accomplish in regard to legislation about foreign insurance companies what c. 47 accomplishes in regard to legislation about Canadian and British insurance companies. C. 56 amends the

Loan Companies Act by providing that where any company under the Act in respect to loan or other transaction has imposed interest and other charges of any kind exclusive of fees disbursed for registration purposes, amounting to more than 2½ p.c., its charter may be forfeited on the order of the Governor in Council if it is a Dominion company, and that its Dominion powers may be terminated if it is other than a Dominion company.

Justice.—Cc. 8 and 40 amend the R.C.M.P. Act. Under c. 8 "Marine Section" is defined as the water transport and personnel. The term "member of the Force" includes a member of the Marine Section but "officer" does not include an officer in the Marine Section. The Governor in Council may appoint detective inspectors, sub-inspectors, and assistant veterinary surgeons, and also the personnel of the Marine Section. The Force is to have all powers, authority, protection and privileges which any constable has by law. The Force is not to be charged with duties under municipal by-laws except as authorized by the Governor in Council. It is made a statutory offence for a constable to disobey or strike any other member placed in authority over him, or for any constable having authority to oppress or tyrannize over any constable. Certain offences are more fully defined. Allowances are made to officers and constables for time served on a provincial police force, and changes are made in the pension allowances to widows and children of officers and constables under c. 8 as regards officers and under c. 40 as pertaining to constables.

C. 11 amends the Criminal Code in regard to horse racing by increasing the continuous running racing days from seven to fourteen. On any one race track there is not to be held, in one calendar year, more than two race meetings of seven days each at which there are running races.

C. 47 further amends the Criminal Code and deals specifically with: the carrying of firearms; the forfeiting of lottery prizes to the Crown; the extension of incestuous relationships to half-brothers and half-sisters; vehicles equipped for making smoke screens; and several other matters, including: summary trial for certain offences where the person charged gives consent; the disposal of certain charges of theft made before a magistrate in the Yukon Territory in a summary way; the procedure in the case of the summary trial of a corporation for an indictable offence, etc.

C. 21 amends the Oath of Allegiance Act. The oath of allegiance to be taken under the Naturalization Act is excepted from this Act, and the oath subscribed under this Act is greatly simplified and shortened. The Governor in Council is given power to require any person appointed to or holding office under the authority of the Parliament of Canada to take oath of allegiance, and also to take oath of office if said oath is not prescribed by existing law.

Labour.—C. 15 is the Relief Act of 1934, which expired on Mar. 31, 1935. Power is given the Governor in Council to make agreements with the provinces respecting relief; to grant financial assistance to any province and to the Canadian Co-operative Wheat Producers Limited; to take measures, when Parliament is not in session, for peace, order and good government; to take measures necessary to maintain the financial position of the Dominion or any province; to provide for relief works under the direction of the Department of the Interior and the Department of National Defence; and to take all such other measures for the carrying out of this Act.

C. 9 amends the Technical Education Act by extending the time during which the unexpended balance shall be carried forward another five years from Mar. 31, 1934.

Marine.—C. 60 provides that the Act to amend the Canadian Radio Broadcasting Act, 1932, is continued to April 30, 1935.

Parliamentary Representation.—All legislation in regard to the franchise of electors, the preparing of voters lists, and the conduct of elections has previously been contained in one Act entitled the Dominion Elections Act. This Act has now been repealed and legislation regarding the franchise of electors, and the preparing of the voters lists, is incorporated in a new Act entitled The Dominion Franchise Act, while legislation concerning the conduct of elections is contained in a new Act entitled the Dominion Elections Act.

C. 51 is the new Dominion Franchise Act. It makes provision for the appointment of a Franchise Commissioner (by resolution of the House of Commons) whose duty it will be to administer the Act, and to register electors. A Registrar of Electors will be appointed for each electoral district by the said Commissioner. Within six months from the time the Act comes into force the Commissioner is to name the date for a general registration by proclamation in the *Canada Gazette*, and the Registrars are to arrange for public notice of same in the post offices. Two enumerators are to be appointed for each polling division by the Registrars. One appointment is to be made on the nomination of the candidate who received the highest number of votes in the last election and the other on the nomination of the candidate who, representing an approved political interest, received the next highest number of votes. The duties of the enumerators and the manner in which lists shall be prepared and posted are detailed. The lists, made as described, are to form the basic lists of a system of annual revision of continuously existing lists of electors. Such revisions will be made by the Registrars commencing May 15 each year, and the Registrar shall for this purpose be a Court of Revision. Any voter may object to a name being put on or held off a list and a final appeal will be to a judge. Doukhobors who are disqualified from voting in British Columbia in provincial elections are also disqualified under this Act. C. 50 is the new Dominion Election Act. It conforms to the new Franchise Act, but otherwise no fundamental changes are made.

C. 61 amends the Representation Act, 1933, providing that it shall be deemed to be in force for the purpose only of authorizing and enabling the appointment of returning officers pursuant to the Dominion Elections Act, 1934.

Pensions, Soldier Settlement and Health.—C. 58 amends the Pension Act by providing for the appointment of a Superior Court judge as acting chairman of the Commission in the event of a vacancy in that office. C. 41 amends the Soldier Settlement Act. Land is deemed to be held by the Director of Soldier Settlement as a corporation sole and not an agent of the Crown when assessment has been made for taxes since Jan. 1, 1933. When land held by the Director is sold for taxes, the agreement for sale is rescinded, but the settler may redeem.

Public Works.—C. 59 is the Public Works Construction Act, 1934. Its purpose is to provide for the construction of public works for the general advancement of the country; to accelerate recovery to more normal conditions; and to increase employment and reduce expenditures for relief purposes. The Governor in Council is given power to do all things necessary to complete the works mentioned in Schedule A of the Act. The aggregate amount of the works mentioned in the said Schedule is $39,690,050.

Railways.—C. 3 appoints auditors for the year 1934 to make a continuous audit, under the provisions of s. 13 of the Canadian National-Canadian Pacific Act, 1933, of the accounts of the national railways.

C. 4 ratifies an agreement made between the Canadian Northern Ontario Railway, and the Campbellford, Lake Ontario and Western Railway dated May 1, 1912. C. 5 ratifies an agreement between the C.P.R. and the C.N.R. respecting the joint use by the C.P.R. of certain tracks and premises of the C.N.R. at Saint John, N.B. C. 10 ratifies an agreement between the Transcontinental Railway and the C.P.R. respecting the joint use, by the Transcontinental, of C.P.R. tracks and premises at Quebec. C. 28 is the C.N.R. Financing Act, 1934. It authorizes the provision of moneys to meet expenditures and indebtedness incurred during 1934.

Trade.—C. 17 amends the Bills of Exchange Act in two particulars. The name of Armistice Day is changed to Remembrance Day in the list of legal holidays, and the civic holiday of any city, town, municipality or other organized district is made a legal holiday.

The Companies Act, 1934, enacted as 24-25 George V, c. 33, comprises seven parts. Part I regulates the incorporation of companies having share capital by letters patent issued under the seal of the Secretary of State. Part II affords facilities for the creation and organization of corporations without share capital and without purpose of gain. Part III comprises regulations applicable to companies incorporated by Special Act of Parliament. Part IV deals with British and foreign mining companies. Part V confers upon corporate bodies, created otherwise than by letters patent, power to establish pension funds and the like. Part VI declares the law whereby companies are recognized as having authority to maintain share registration and transfer offices, either within or without Canada. Part VII repeals the earlier Companies Acts and amending Acts and provides for the coming into force of the new Act on a date to be proclaimed. A proclamation was issued bringing the Companies Act, 1934, into force and effect in its entirety on Oct. 1, 1934. Significant changes in Part I are included in the sections dealing with the issue of prospectuses and the preparation of accounts and submission of balance sheets and statements at annual meetings of shareholders. With respect to each of these subjects, provision is made for much more complete disclosure of relevant information than was previously prescribed. Door-to-door canvass for subscriptions for shares is forbidden. Shareholders and bondholders are given the right to a copy of each balance sheet and financial statement laid before the annual meeting. Preferred stock without nominal or par value with preference as to principal or subject to redemption is no longer permitted. It will no longer be necessary for a company which does not issue a prospectus to file with the Secretary of State a statement in lieu of prospectus before proceeding to the first allotment of shares.

C. 38 amends the Meat and Canned Foods Act in respect of the seizure of canned fish and shellfish when the cans are falsely marked. Before the amendment the cans could not be seized before they were offered for retail sale, and could therefore be exported while wrongly marked. By virtue of the amendment they can now be seized at any time. Under the amendment such cans are confiscated to the Crown by two justices of the peace or a magistrate having the powers of two justices, but only after proof that the wrong marking was intended to deceive.

C. 54 amends the Food and Drugs Act by enumerating, as Schedule A, certain diseases and prescribing that no person shall import, offer for sale, or sell any remedy represented by label or advertisement to the general public as a treatment for the

said diseases. Provision is further made giving the Minister the power to add to or remove diseases from the list. The Minister is also empowered to add or remove material from Schedule B to the Act. The importations, sale, etc., of compound vinegar, vinegar or substitute for vinegar is also prohibited. Acetic acid found in the possession of a food products manufacturer is liable to seizure and the manufacturer to fine and imprisonment, and the acetic acid shall be forfeited to the Crown.

C. 14 amends the Precious Metals Marking Act by consolidating and revising the Act as it stands at present for the purpose of bringing it into harmony with the changed conditions in the particular trades and branches of business affected by the Act. It does not introduce any radical changes.

Miscellaneous.—C. 37 amends the Inquiries Act by adding to it a new part entitled Part IV. This gives to the Governor in Council the right to confer upon an International Commission all the power which may be conferred upon commissioners under Part I of the Act. Such powers are to be exercised in Canada subject to such limitations as the Governor in Council may impose.

C. 7 extends the agreement between His Majesty the King and the city of Ottawa, dated Mar. 30, 1920, for a period of one year from July 1, 1933.

Section 3.—Provincial Legislation.

A list of the public Acts of the Provincial Legislatures usually appears at this place in the Year Book. In order to conserve space, it has been decided to refer the reader to the different provincial authorities for information in this connection. It is felt that whatever is lost to those readers who are interested in having all provincial legislation brought together and listed under one head, is more than offset by the information of more general interest which it has been possible to include in the limited space available, but which would otherwise have had to be omitted.

Section 4.—Principal Events of the Year.

Subsection 1.—The Economic and Financial Years 1933-1934.

The great depression which had since 1929 involved the whole world in deepening gloom reached its lowest point in North America in the first quarter of 1933. Canadian industrial production was at its minimum for the post-war period in February, and that of the United States in March. Improvement, at first seasonal, but later on more than seasonal, commenced with the advent of spring, continued throughout the summer, and persisted in the autumn when the normal trend of activity in Canada is downward. There were comparatively small declines in employment even in the winter of 1933-34, and improvement was resumed in the spring of 1934 and continued, though at a slower rate, throughout that year. The general gain in activity is shown in the diagram on p. 829, indicating the fluctuations in employment.

The resumption of activity in the spring and summer of 1933, considerable though it was, was not sufficient to prevent that year from being the lowest of the depression. Thus the general index number of employment, which had averaged only 87·5 p.c. of the 1926 base in 1932, fell further to 83·4 on the average of 1933, but rose substantially to 96·0 in 1934. Thus the last completed year, 1934, was distinctly better than either 1932 or 1933, although there was still considerable ground to be covered before a return to normal conditions could be considered as having been effected.

The general advance in 1934 as compared with 1933 is indicated in the chart on p. 1191. Practically all the figures for 1934 indicate improvement as compared with 1933. An outstanding feature of 1934 was the continued decline in interest rates on high-grade securities. Interest rates on Province of Ontario bonds declined from 119·8 p.c. of the 1926 average in January, 1932, to 76·2 p.c. of that average in December, 1934, as shown in the table on p. 879.

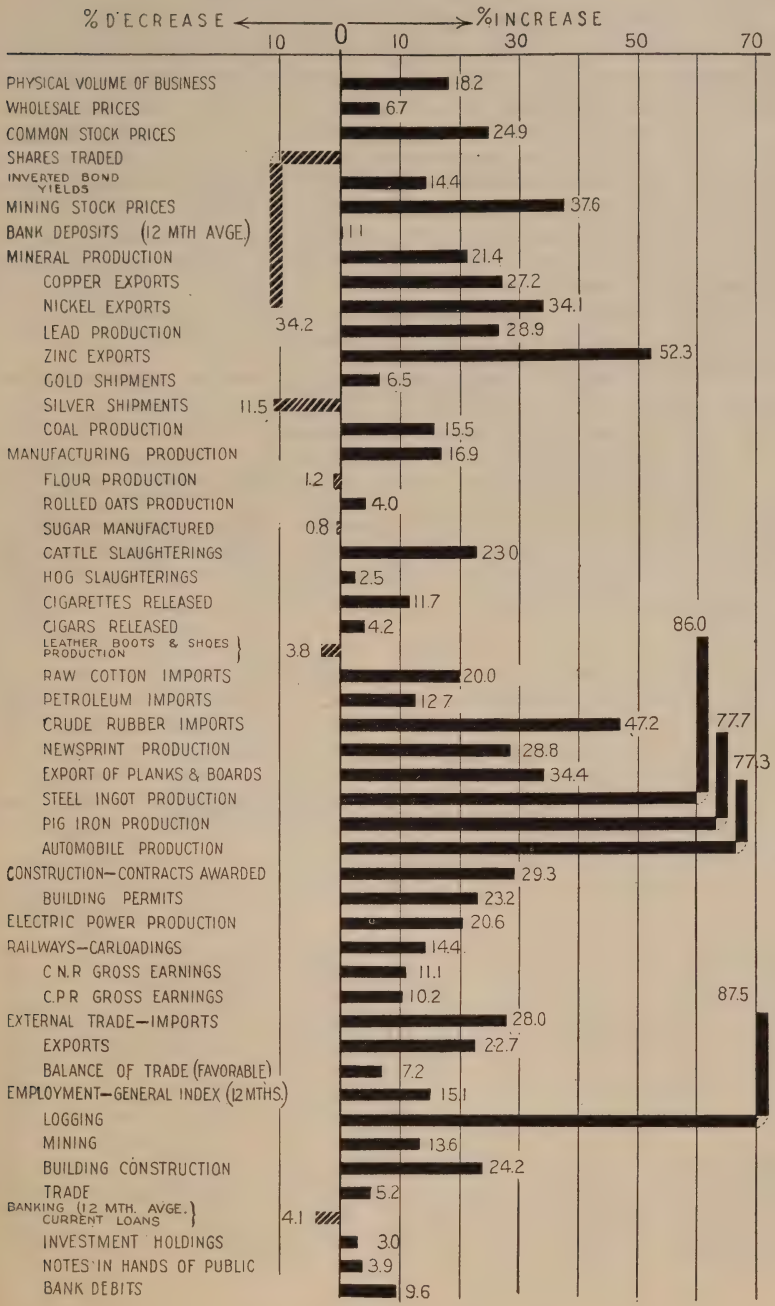
Agriculture.—The agricultural situation showed marked improvement in 1934, the total value of field crops in that year being estimated at $544,974,600 as compared with $453,598,000 in 1933 and $452,526,900 in 1932. Thus the 1934 figure marks an increase of approximately 20 p.c. over either of the two preceding years and a larger increase over 1931. The aggregate value of farm live stock in Canada as in June, 1934, also showed a moderate increase over 1933.

Manufacturing.—The index of manufacturing production averaged 93·4 p.c. of the 1926 base in 1934 as compared with 79·9 in 1933, a gain of 16·9 p.c. The corresponding gain in the index of employment in manufacturing plants was 11·6 p.c. The gain was proportionately greater in the production of producers goods than of consumers goods, the former gaining 28 p.c. as compared with 1933 and the latter 9 p.c.

Forestry.—An active export trade was maintained in planks and boards, the outward movement being 1,367,603,000 feet, an advance of 34·4 p.c. over 1933 and a higher figure than in any year since 1930. Newsprint output showed a gain of 28·8 p.c. as compared with 1933. The 1934 output was the highest on record except for 1929.

Mines.—Mineral production of Canada in 1934 was valued at $277,492,000, an increase of almost $56,000,000 over 1933 and of $86,000,000 over 1932. The value of the output of metals reached the highest point on record, both gold and base metals contributing to this result. The output of copper, of lead, of zinc and of nickel was the highest ever recorded, while coal production increased 16·7 p.c. over 1933.

Hydro-Electric Power.—The output of hydro-electric power in 1934 was 21,167,700,000 k.w.h., a gain of 20·6 p.c. over 1933 and of about 17 p.c. over 1930, the previous record year.



Construction.—While still at a low level, construction contracts awarded amounted to $125,812,000 in 1934 as compared with $97,290,000 in 1933, a gain of 29·3 p.c.

External Trade.—Canada's external trade in the calendar year 1934 showed considerable advance over the preceding year. Imports were valued at $513,469,000 as compared with $401,214,000 in 1933, an increase of 28·0 p.c. Domestic exports were $652,887,000 in 1934 as compared with $531,749,000 in 1933, a gain of 22·8 p.c. Exports of new gold are not included in this figure. If they had been, to the recorded favourable balance of $146,434,000 (allowing for foreign exports) there would be added another $90,982,000, being the excess of gold exported over gold imported.

Transportation.—Railway traffic showed considerable gain in 1934, the total car-loadings of revenue freight being about 2,325,000 cars as compared with 2,032,000 in 1933, a gain of 14·4 p.c. Both the Canadian National and the Canadian Pacific recorded gains averaging 10 to 11 p.c. in gross operating revenues in 1934 over 1933. Cargo tonnage at leading ports also showed an increase.

THE ECONOMIC SITUATION OF CANADA

STATISTICS FOR THE YEAR 1934 COMPARED WITH 1933

Wholesale Prices.—Wholesale prices were relatively steady during 1934 at about 72 p.c. of the 1926 average. These prices were substantially higher than the low point of 63·6 p.c. of the 1926 base reached in February, 1933.

Bank Debits.—The grand total of bank debits, *i.e.*, the grand total of cheques charged to individual accounts, at the thirty-two clearing centres of Canada in 1934 showed a gain of 9·6 p.c. over 1933, being $32,867,000,000 as compared with $29,981,000,000. (See p. 989.)

Comparisons of Canadian Recovery with That of Other Countries.—The recovery of the industrial production of Canada in 1934 as compared with 1933 is shown by the following statement to have been among the most rapid recorded by any of the countries which maintain indexes of industrial production. While the composition of this index varies so greatly as among the countries that it is impossible for any valid conclusion to be drawn from the relative figures for different countries, the percentage gain between 1933 and 1934 is of considerable interest, as is also the percentage of gain shown in the second statement indicating the degree of recovery in each country from the lowest point reached in 1933.

Average Index Numbers of Industrial Production in Leading Countries for 1934, Compared with 1933.

(1928=100, all figures having been placed on the 1928 base by the statisticians of the League of Nations.)

Subsection 2.—Other Principal Events of 1933 and 1934.

Provincial General Elections.—During the two years 1933 and 1934, general elections took place in four of the provinces. In 1933, general elections took place in Nova Scotia on Aug. 22, and in British Columbia on Nov. 2; the Liberals, under the respective leadership of A. L. Macdonald and T. D. Pattullo, were returned. On June 19, 1934, general elections took place in Ontario and Saskatchewan; the Liberals, under the respective leaderships of M. F. Hepburn and J. G. Gardiner, were returned.

Celebration of Arrival of United Empire Loyalists.—On May 18, 1933, the one-hundred-and-fiftieth anniversary of the arrival of the United Empire Loyalists at Saint John was celebrated in that city. The occasion was made a public holiday in New Brunswick and a message of congratulations was received from the King, while the Prime Minister of Canada, a descendant of the United Empire Loyalists, received the freedom of the city, reviewed military and naval units on parade, and was the principal speaker of the occasion.

Centennial of the City of Toronto.—On Mar. 6, 1934, there was celebrated the centennial completion of the first century of the existence of Toronto as a self-governing city. Greetings were received from different parts of the Empire. The Prime Minister of Canada and the Leader of the Opposition were present at the special centennial meeting of the City Council and the civic luncheon.

Tercentenary of Three Rivers.—On July 15, there commenced the celebration of the third centenary of the foundation of the city of Three Rivers by the Sieur de Laviolette. A monument to the founder was unveiled by the Lieutenant-Governor of Quebec and an historical pageant illustrating the history of the city was staged.

Jacques Cartier Quatercentennial.—The four-hundredth anniversary of the discovery of Canada by Jacques Cartier, sea-captain of St. Malo, was celebrated in August and early September. The Government of Canada invited the Governments of the United Kingdom, the French Republic and the United States to participate in the celebrations, and the following official delegates represented these countries: The United Kingdom—The Rt. Hon. H. A. L. Fisher, F.R.S., and Admiral of the Fleet Sir Roger Keyes, Bt., G.C.B., K.C.V.O.; The French Republic—M. P. E. Flandin, Minister of Public Works and M. S. Charlety, Rector of the University of Paris; the United States—The Hon. Warren D. Robbins and Admiral Wat Tyler Cluverius.

The official itinerary of the reception and celebration was as follows: Charlottetown, Aug. 24; Gaspé, Aug. 25-26; Quebec, Aug. 27-30; Trois Rivières, Aug. 30; Montreal, Aug. 31–Sept. 2; Ottawa, Sept. 2-3; Toronto, Sept. 4; Niagara, Sept. 5-6; Rochester, Sept. 6. The celebration centred at Gaspé, where the Prime Ministers of the Dominion and the province of Quebec, together with Cardinal Villeneuve, took part in the proceedings.

Subsection 3.—Obituary.

1933.—(See also pp. 1112-1113 of the 1933 Year Book.) June 28, John F. Smith, Eltham, England, Canadian Fruit Trade Commissioner. July 7, Albert E. Horton, Ottawa, Ont., Chief Clerk of Sessional Papers, House of Commons. July 15, Hon. Finlay G. MacDiarmid, Toronto, Ont., former Minister of Public Works

and Highways of Ontario. July 16, James Kirkwood, Ospringe, Ont., former M.P. for East Wellington. July 18, Sir François Lemieux, Quebec, Que., Chief Justice of the Superior Court of Quebec. July 19, Paul E. Caron, Lake Beauport, Que., Secretary of the Revenue Department of Quebec. July 26, F. A. Labelle, Hull, Que., Deputy Chief Railway Commissioner. Aug. 3, J. D. Robertson, Edmonton, Alta., Deputy Minister of Public Works for Alberta. Aug. 10, Judge James Herbert Denton, Toronto, Ont., Senior County Judge of the County of York. Aug. 12, Dr. M. O. Malte, Dominion Botanist, Department of Mines, Ottawa, Ont. Aug. 13, Dr. William Terrill Macoun, Dominion Horticulturist, Ottawa, Ont. Aug. 13, Philip James Henry, Ridgetown, Ont., M.L.A. for East Kent. Aug. 25, Hon. Senator Gideon D. Robertson, LL.D., Ottawa, Ont., former Minister of Labour. Aug. 26, George Langley, Maymount, Sask., former Minister of Municipal Affairs. Aug. 27, Col. Henry Brock, Toronto, Ont., former Director of National Service. Sept. 1, Hugh A. McPhee, Ottawa, Ont., Head of the Review Branch of the Department of Pensions. Sept. 3, Dr. Alfred G. Burrows, Toronto, Ont., Provincial Geologist. Sept. 6, Lieut.-Col. A. W. Duffus, Vancouver, B.C., former Assistant Commissioner of the Royal Canadian Mounted Police. Sept. 12, Hon. Frederick L. Béique, Montreal, Que., Senator for De Salaberry. Sept. 15, J. E. Emile Leonard, Montreal, Que., ex-M.P. for Laval. Sept. 16, Dr. Louis Martial Pelletier, Hawkesbury, Ont., former Chief Translator, Department of Public Archives. Sept. 24, William Edgar Raney, Toronto, Ont., Justice of the Supreme Court and former Attorney General of Ontario. Sept. 25, Hon. Pascal Poirier, Shediac, N.B., Senator for Acadie. Sept. 26, A. E. Poirier, Montreal, Que., ex-Recorder of Montreal. Oct. 7, John D. Sperry, Petite Rivière, N.S., former M.P. Oct. 10, Hon. James David Stewart, K.C., Charlottetown, P.E.I., Premier of Prince Edward Island. Oct. 11, Colonel W. J. Keightley, Quebec, Que., Chief Inspector of Ammunition at Dominion Arsenal. Oct. 20, W. C. Wells, Vancouver, B.C., former Minister of Lands in British Columbia. Oct. 24, Fred M. Sproule, Hampton, N.B., former Deputy Speaker of New Brunswick Legislative Assembly. Oct. 25, W. J. Bowser, K.C., Vancouver, B.C., former Premier of British Columbia. Nov. 5, Fred J. Skinner, Kingston, Ont., M.L.A. for Leeds. Nov. 6, John Chisholm, K.C., Montreal Que., former Assistant Deputy Minister of Justice. Nov. 8, Ormond Higman, Ottawa, Ont., former Chief Electrical Engineer, Department of Trade and Commerce. APPENDIX I.

1.—Immigration in the fiscal year 1934-35.

During the fiscal year ended Mar. 31, 1935, the immigrants into Canada, classified as in the summary table appearing on p. 213 of this volume, were as follows: from U.K., 2,198; from U.S.A., 5,960; from other countries, 3,978; total, 12,136.

Canadians returned from the United States during the fiscal year ended Mar. 31, 1935, classified as in the table on p. 227, were as follows: Canadian-born, 5,811; British-born with Canadian domicile, 937; naturalized Canadian citizens, 870; total, 7,618.

2.—External Trade of Canada in the fiscal year 1934-35.

Preliminary figures of the external trade of Canada for the fiscal year ended Mar. 31, 1935, show a grand total trade of $1,189,550,801, as compared with a figure of $1,019,453,094 in the preceding year, or an increase of $170,097,707. The increase in the imports was $88,618,219. Domestic exports increased by $80,131,849, and foreign exports by $1,347,639. Figures by industrial groups are given in the following table, where the figures of imports and exports may be compared with the totals given for previous years in the tables on pp. 554. 562-563 of this volume

APPENDIX II.

Dairying Statistics.

The dairy industry is dealt with under the following headings: total milk production; butter and cheese; miscellaneous factory products; and finally, the total value of the dairy production of Canada. For the year 1934 preliminary estimates have been made which will be revised when annual returns are available.

Total Milk Production.—The data presented in Table 1 represent the quantities of dairy products expressed in terms of milk. The total milk production for 1934 is estimated at 16,295,952,700 lb., an increase of 247,227,800 lb. or 1·5 p.c. over the previous year. Creamery butter, dairy butter and miscellaneous products increased in quantity, while milk used for cheese making and for domestic and live-stock consumption declined.

1.—Totals, Dairy Production of Canada Expressed in Pounds of Milk, 1925-34, and by Provinces, 1934.

[1]The data in this column for 1933 and 1934 include the ice cream made in specialized ice-cream plants and confectionery establishments.

Butter and Cheese.—The butter output of creameries in 1934 was 233,047,500 lb., a gain of 13,814,954 lb., or 6·3 p.c., over the previous year, and 7,092,254 lb., or 3·1 p.c., over the 1931 production, which was the largest amount previously recorded. Dairy butter increased 3,433,000 lb., or 3·2 p.c., to 109,918,000 lb. Butter reached its maximum exportation in the year ended June 30, 1933, when 34,128,944 lb. were exported. For the calendar year ended Dec. 31, 1934, the exports were 428,300 lb. and the imports were 2,875,562 lb. The apparent consumption of butter in 1934 is estimated at 335,029,401 lb., or 30·92 lb. per capita.

The quantity of factory cheese made in Canada during 1934 is estimated at 99,754,500 lb., a decrease of 11,391,993 lb. or 10·3 p.c. Cheese made on farms is estimated at 1,011,300 lb., an increase of 68,000 lb. The fact that greater quantities of milk were used for butter making and for the fluid milk trade in recent years has resulted in a significant reduction in cheese manufacturing. The decrease recorded between 1933 and 1934 was greater than that shown between 1932 and 1933, but the most outstanding decline occurred in 1927 and a lesser decline in 1929. In 1868 the quantity of cheese exported from Canada was 6,141,570 lb.; in 1904 it reached its maximum exportation of 233,980,716 lb. For the calendar year ended Dec. 31, 1934, the exports were 61,167,800 lb. The apparent consumption of cheese in 1934 was 39,410,147 lb. or 3·64 lb. per capita. It will be seen, therefore, that the domestic consumption represented only 39·1 p.c. of the total cheese production of the Dominion.

Miscellaneous Factory Products.—The production of condensed milk in Canada in 1934 is estimated at 8,916,000 lb. as compared with 9,899,331 lb. in the previous year. Evaporated milk increased from 53,420,684 lb. to 56,778,000 lb. The production of all concentrated whole-milk products amounted to 67,918,000 lb. in 1934 as compared with 64,608,304 lb. in 1933. The production of concentrated milk by-products amounted to 25,750,000 lb. in 1934, of which 16,576,000 lb. was skim-milk powder. In 1933 the production was 20,673,252 lb. Thus concentrated whole-milk products increased 5·1 p.c. and concentrated milk by-products increased 24·6 p.c. Ice cream made in factories in 1934 amounted to 4,444,000 gallons as compared with 4,066,209 gallons in 1933, an increase of 9·3 p.c.

[1]Provisional estimate. [2]Gallons.

Total Value of Dairy Production.—The value of all dairy products in 1934 is estimated at $181,966,021 as compared with $170,828,667 in 1933, an increase of 6·5 p.c. The value of the dairy production of Canada in 1934 was the highest since 1931 and shows an advance of $22,891,888 or 14·4 p.c. over the low value recorded in 1932. All products increased in value except factory cheese. The prices of creamery butter during the first quarter of 1934 were higher than in the same period of the preceding year. The midsummer decline was about the same as usual, but as the season advanced butter prices closely paralleled those of the previous year. The value per lb. of creamery butter, as shown in Table **3,** represents an average of 19·9 cents in 1934 and 19·8 cents in 1933. Total butter shows a value of $63,933,300 in 1934, an increase of $3,764,191 as compared with 1933, while total cheese was valued at $9,932,921 in 1934, a decrease of $1,289,084.
